I remember that Colt23; that one had a tunable dual-conversion receiver. It was a good one.

Source record: 36532

I've got one that will put out 0dBm of noise from 100kHz to 1.3GHz. Usable output to 3GHz, but the response becomes rough. Basically, it is the ARRL circuit, with 90dB of gain following the noise diode. E-mail me directly. If anybody else needs the circuit, I will supply that information.

Pete

6272. FT-817 CT-39 accessory ?

E. F. Johnson Thunderbolt linear amplifier in very good
condition.

Inside is immaculate, clean shiny almost like new.
Has full output from a good pair of 4-400A tubes.
Outside is extra nice with a couple of minor scratches that
will clean up easily. Otherwise immaculate.
Inside looks almost like new above and below deck.
This amp sparkles. Front panel has one small sticker that
can easily remove.
Needs 220V AC and comes w/good power cord. Also has original accessory
cord
with special connector.

$895.00 plus insured shipping
Includes heavy duty packaging w/woodbase.

E-mail me for pictures or to arrange purchase

6275. Repeater Help

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-02 16:09:20 UTC
From: John Smith <someone@microsoft.com>
Message-ID: <3deb8561_3@news.newsgroups.com>
Source record: 36536

I am a volunteer for a local Ski Patrol. We are using mostly Motorola handheld FM radio's in the 155mhz range (about 100 of them). We have a base station at the top of the mountain and at the bottom. This year we have added CTCSS and now can screen out all of the annoying other rescue squads that used to dominate us (at the top of the mountain). However, we STILL have not solved our poor coverage problem. Specifically, we have dead zones all over the mountain where we cannot communicate handheld to handheld or handheld to the top or bottom. Sometimes, we can't communicate well even from the top to the bottom. In addition, we have a "back side" of the mountain, where we can only communicate from the backside to the top, and where we would like to be able to talk to the base (at the very bottom).

My question is, would a repeater help this situation the most? Or maybe better (higher) antenna's? Would it be possible (practical) to have a repeater at the top AND at the bottom? Would something like the Vertex VXR1000 connected to our base statations (which are really just mobils with transformers) be of any practical use?

I would appreciate any advice, especially on how to do this on a shoe-string (we are a volunteer organization).

Thanks,

Mark Rees

FOR SALE:

Collins MM-1 microphone, winged emblem. Great shape.

Ideal match for the Collins S-line, and KWM-2A etc., but will work nicely with other Collins gear.

"Designed to fit your hand comfortably. Engineered for max voice response, die- cast case finished in brushed satin chrome. A five-foot length of Koiled Kord with mike plug is supplied."

The MM-1 has a frequency response from 200-10,000 cycles per second and has an output level of -48 db.

Excellent condition with the original Collins style 0.206" plug.

Now reduced to just $115.00 plus shipping

E-mail me to arrange purchase.

If you were starting from scratch, a repeater might make sense, but
none of your installed base of handhelds would be able to work on
split frequencies. The ideal situation would be to have a split
frequency repeater on a hill facing your ski area.

The VXR1000 seems more appropriate when a person with a handheld goes
to remote location in a vehicle with a mobile unit. It interfaces
between their handheld to make the vehicle's mobile rig a repeater
back to base. I don't think that will do what you want.

Your cheapest route would be to upgrade your base stations, as there
are only two, rather than your 100 handhelds.

The best way to do this is to upgrade antennas, and raise them as high
as possible. Use quality coax, and use an SWR meter to see that the
system works well.

VHF works line-of-sight, plus a little. Depending on your layout,
having the antenna for the bottom station a bit further away from the
base of the mountain might help. Site to site for handhelds won't
improve, but the dispatcher can relay messages as long as the base
station can hear everyone.

Ask a local ham radio club for advice, as someone onsite will see
details not clear here.

Happy trails,
Gary (net.yogi.bear)

Why should we pay $11.95 when they only cost $3.50 new. I can buy them
here in the UK from Maplins mail-order for ï¿½2.25 UK Pounds post free.
I could even ship one to someone in the states and it still wouldn't
cost anything like the $13.45 inc shipping you are asking.

These are custom units designed to fit the radio, with rubber gaskets that form to the radio to help stabilize the antenna and keep the connector on the radio from becoming broken.

A repeater may not be legal for the radio service you are using. For
several years repeaters in the VHF business band were not legal for
private businesses. Not sure how the Part 90 rules read now. For the
antenna, on top of the mountain you may need to have an antenna that
has some electrical down tilt. Generally most of the signal radiates
directly away from the antenna and you are trying to communicate
downhill. I would suspect much of the signal is wasted just hitting
the next mountain. For the bottom of the hill maybe a open dipole
array where you can actually steer the signals.

You would be best served to contact a commercial two way radio sales
and service who offer engineering for best coverage.

You will need a Hi-Impedeance microphone for starters.

A Astatic D-104 will probably work, but will likely be high pitched. If
you can find one a Shure 444d would do fine on it.

6288. Will Icom PS-55 Power a 706?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-03 02:11:51 UTC
From: "M.M." <junquemaile@cox.net>
Message-ID: <Xns92D8C36E8BAE4nobodynowhere@68.6.19.6>
Source record: 36449

Subject asks my question. I have a shiny new Icom IC-706 and a dusty but functional PS-55 that worked fine with my 735. Anyone know if it'd power the 706 OK? The voltage/current ratings seem to be OK and the power connector matches. I guess I'm concerned about the power switch and whether it can handle the AC current at power on. The newer PS's are switchers where the PS-55 is a good old linear supply with a big transformer.

So whatcha think???

Thanks... Mark AA7TA

6292. Testing Maxtrac Radios

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-03 03:54:31 UTC
From: ruddager99@hotmail.com
Message-ID: <5628784d.0212021954.160fdccb@posting.google.com>
Source record: 36453

Hi, a buddy just picked up a couple of the older Motorola Maxtrac 800 2-way radios. He has the mic, radio, and antenna. No wiring harnesses. Is there anyway to test these easily to see if they even work? Speakers aren't a problem but what's the safest/easiest way to power them?

Thanks!!!

6293. FS: Alinco DR-140 Yaesu VX5

6294. AL-80B and IC-756PRO

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-03 04:40:17 UTC
From: Jim/KA6J <KA6J@homerattbi.com>
Message-ID: <RAWG9.213264$QZ.33895@sccrnsc02>
Source record: 36455

Anyone using an Ameitron AL-80B with the Icom '756PRO (not PRO II)?

I am considering the purchase of the 80B, and I am concerned about an external keying rely and the input SWR.

The Icom manual states the keying relay will handle 2.0 amp at 16vDC. The amp requires 100ma at 12vDC. The rig should handle the load??

Also, prior amplifiers tried with the 756 had over a 2:1 SWR at the input on the higher HF bands. The 80B claims tuned inputs that are adjustable....I hope the slugs have sufficient value to tune the input to a solid state rig like the 756pro.

Appreciate any comments......

I use an AL-811H with my 756 Pro, directly hooked to the rig's amp keying
circuit. No problems. Also, the 811H also has tuned inputs, and I get 1.4:1
or lower between the rig and the amp on any band.

6304. Noisy Kenwood R1000

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-03 11:11:09 UTC
From: Serial # 19781010 <zsl103@icon.co.za>
Message-ID: <hj3puuo3v1ihf5pn9jiro6nnigssk2138i@4ax.com>
Source record: 36465

Hi all,

I have a Kenwood R1000 (Secondhand) connected to a home built 40m inv V antenna. This used to work great, till Las Sunday afternoon.

I also installed a separate 20m inverted V on a separate feedline on Sunday and since then the receiver has been noisy. I get background static o S6/S7 peaking to S9.

This is on both antennas, I have since taken down the 20m and stripped the 40m, re soldered all the joins etc. To no avail.

I think the noisy is received, since if I turn the RF Modulator, it modulates the incoming signal (What I can hear of it) as well as the noise.

If I unplug the aerial and turn up the volume, I get a similar noise, but the RF Modulator has no effect on it, so I imagine this noise originates in the receiver.

Finally the question, what is this noise, what do I do abou it?

Any ideas?

Thanks

Sander Wissing

For sale - rather rare Globe HG-303 novice transmitter. Mint
condition.

6146 final for 75 watts on 80, 40, 20, 15 and 10m bands. CW only.
Has metering for plate and grid current.
Standby-Operate-Tune switching etc.

Comes in the original box with manual.

Looks just like new and operating fine with full output.

Picture at:

http://home.cfl.rr.com/happysurfer/imag/globe_hg303.jpg

Will sell for $135.00 plus shipping

No, that is NOT "2.0A" @ 16vdc, it IS "0.2 A" @ 16Vdc 200Ma.

What band are you trying to use the amp on, with that kind of SWR ?
The ATU on the 756 should handle it anyway.

You shouldn't because you don't recognize that there might be better parts out there than the stock $3.50 ones, and consequently you will need to learn by breaking your radio's SMA connector.

Everyone else should buy them because they are a quality product, and offer better stability and appearance than the stock adapters.

I have several of them. One of them had a problem (faulty connector from his supplier) and Stephen replaced it without hesitation.

Exactly where is the wattmeter located?
Is the 50W reflected flowing back into the transmitter?

I highly doubt this would protect your handheld for the rigors of a bnc
antenna being changed on a semi-often basis.
Stephens connector is a good one. Granted, it is the 'cream' of the crop,
and demands a premium.

No it will not. Th IC-735 had contacts in the radio power
switch for the 115VAC the IC-706 does not. I don't
believe any of the current crop of Icoms have tht feature.
Check the schematics

6318. tk7 v0.4 open source software for ICOM IC-Q7 available

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-03 15:41:16 UTC
From: "Bob Parnass, AJ9S" <usenet2@parnass.org>
Message-ID: <3deccefc$0$1457$1dc6e903@news.corecomm.net>
Source record: 36479
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner

tk7 version 0.4 is now available for free download.

tk7 is open source, multi-platform software which configures the
ICOM IC-Q7A wide coverage walkie-talkie. It runs on Linux, MacOS X,
BSD, UNIX, Windows (95 and later), and other operating systems.

Changes in version 0.4 include:

1) Memory bank channels may now be edited within tk7. Channels may
be changed, deleted, inserted, or swapped with adjacent
channels. More comprehensive changes can be made by exporting
the channels to a CSV file, then using a text editor or
spreadsheet program.

2) Added a duplicate frequency check.

3) Fixed a bug so tk7 now recognizes whole number CTCSS frequencies

You can learn about and freely download an experimental version
of tk7 from:

http://parnass.com

Thanks to Vojtech Bubnik for documenting the IC-Q7 memory structure
from Goran Vlaski's IC-Q7 Windows software. Thanks to
BlakkeKatte@yahoo.co.uk for publishing detailed information about
the IC-R2 protocol and file layout on the web. I am indebted
to Debbie Fligor, N9DN, for testing tk7 on MacOS X 10.2.1.

I don't warrant the software, though it will cost you nothing.

Not sure what you are talking about. The 735 runs off 12/13 VDC, not 115 volts AC.

Perhaps your question is not stated properly. Surely, the 706, which needs 20 amps max, will run off the same power supply as the 735 does.

For Sale on Ebay Item # 1943105130
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1943105130

Kenwood TS-520 SSB/CW HF Transceiver in excellent condition.
Serial # 521184

80/40/20/15/10M bands USB, LSB, and CW modes. About 100W output power
or more on all bands.

All solid-state with tube finals. Finals can be powered down when not
transmitting
to save heater life. Built-in cooling fan.

Extremely sensitive receive, really clear. Pulls in weak signals well.

Well-built and rugged radio, one of Kenwood's finest. Often used in
mobile configs.
Can be powered by 120VAC, 240VAC, or 13.8VDC.

Includes 120VAC power cord and Service Manual.

Has VOX, NB, AGC, RIT, Mic control, Carrier control, Standby, WWV
receive, etc, etc.

A few minor scratches on cabinet, but face is in great condition,
all lettering clear and bright.

Installed tubes are working great and includes extra new tubes
2 x 6146A, 1 x 6146B finals (2 required)
1 x 12BY7A driver (1 required)

Great output and receive recently verified but due to age and type of
equipment, sold "as is".
Buyer pays for a well packed shipment.

Source record: 36489

SUBJECT: MY OLD TS820S

Hi, guys,

I have an old TS820S but it has a very poor sensitivity. I have done the procedure indicated in the manual about the adjustment, employing the marker tone, looking fot the maximun position of the S meter, and ajusting the coils in the ant and mix plate.

The resorts were these:

BAND 1.8 3.5 7.0 14.0 21.0 28 28.5 29
29.5

S 4 4 4 2.5 1.5 -------
did&#65533;t heard the tone------

I did all the proceduries indicated in the manual, this is: looking for the maximun S with Drive and Tuning knows using the marker-

Like you see the S indication is going down as frequency is going hight.

Even inside of 7.0 band the situation was like this:

frequency 7.0 7.15 7.3

S 4 3 2.5

Maybe some components are with difficulties.

Could you give me some ideas?

PLEASE, ANSWER TO THIS EMAIL: josecarlosleon@hotmail.com

Very thanks. Jose (CP6/CO3CL)

It is not so much the prices, but the misrepresentation of the equipment that you can run into. If an item is stated "as is", that's fine, but when the equipment is supposed to be ok, and it isn't, that's not ok. I guess it is like any flea market, but at least you can read the person, when you are dealing in person.

Pete

The PS-55 runs on the 115V but the switching is part of the radio
on/off switch. Almost all modern HF rigs use the same 6 pin
plug, four of the pins are for the 13.8VDC on the PS-55 the
other two pins bring the hot side of the115VAC to the radio
and switching is provided by the radio on/off switch. The
706 does not have this type of switch so the only way the
PS-55 will work is to open it up and reroute the 115VAC hot
side and have an external switch. Perhaps this will clear it
up for you.

Source record: 36493

The problem apparently is that the PS-55 is like the power supply for
the IC-701 in that the A/C switch for the supply is in the radio and
not in the supply. That's why I recommended just putting a switch in
the PS-55 to take the place of the switch which the 706 does not have.
It's not a matter of whether or not the PS-55 will supply the correct
voltage and current. It will. It's just a matter of how do you turn
the thing on!

Yep Pete. The feedbacks do not always give you a good feel for the person
but they help a little bit.

I just spent two weeks dealing with a bozo who borrowed his fathers callsign
to give some credability to his ebay ham radio items. He sold items twice
(look at the pictures, same serial number) using two accounts. He claimed
someone else opened the other account and stole his pictures. I even posted
to that effect in this newsgroup. Turned out I was wrong. We bagged him
when Western Union had a photo of him picking up a wire transfer from the
Canary Islands. Wasted lots of time on this turkey to help a friend recover
a lousy $150 but it was worth the satisfaction.

That ciruit in the PS-55 was only to turn it on or off via the power switch
on the IC-735.
The PS can be "manually" switched on or off by the switch on it's front
panel.

Okay, well that explains it. My old Icom power supply actually has a proper AC
switch on it, but I guess they all weren't built that way.

To me, ebay is a mixed bag. The misrepresentations are gross though. I am especially wary of buying from any of the numerous non-hams selling there. I love the "I was told it was working 25 years ago when it went into storage!" or the "I turned it on and all the tubes light up, it looks to be all there, so I'm sure it's fine!" Yeah, right! They do next to no research and try to elaborate on how great a piece of gear it is. My all time favorite was " This radio has such great features as: on/off switch..." LOL!! How about the "Rare S-38B"!
Unfortunately I've found out the hard way to be selective concerning the things I bid on. Too many times my passion got in the way of common sense, live and learn.

Why should one spend money (or build) an interface box? The original
question already had the answer. The rig is capable of switching a
higher voltage (16 vs 12) and higher current (200 vs 100ma) than the
amplifier requires.
As far as SWR goes, I used at one time the Heathkit equivalent of the
AL80A with a TS430S. That rig was probably more sensitive to high SWR
than the newer units. Worked fine on standard 80-10 bands; not too well
on WARC bands where there is no separate amplifier band switch position.

Yes the PS-55 will work fine with your IC-706, you will just need to use an external switch to turn it off.

I used to recommend using a switched power strip. If you adventurous adding an AC switch to the PS-55 power supply is not a hard chore. You would just need to disconnect the leads that run out into the power cord. As I remember they were green and blue also much smaller than the RED ad Black DC leads.

The AC switching wires are actually shorted together in the 706. so if the PS-55 is plugged into AC then the moment you connect the DC power cord to the 796 the PS-55 will immediately power up.

Have fun...

Gary K8IZ

Theoretically it would be 100 watts out BUT the SWR is going to be high enough that most modern transcievers will cut the power back to something substantially less to prevent damage to the transciever.

Get a copy of the tech manual "Now You're Talking". That will give the theoretically correct answer. As several have stated though, your radio will either cut back or die if you run very long at that rate.

> the thing on!
>

Yep, that was actually my question. I know the '55 will run the 706, it was a matter of where the power is switched. I assumed, wrongly, it turns out, that all the Icoms were like the 735 that switches both the radio & PS from the radio on/off switch. I know now that it's not the case. Guess I shoulda done more research before asking. With the 735, I had the PS on a shelf under the desk but with the 706 it'd have to be more accessible. I'll probably sell the '55 (anyone interested?) and use my big solar-charged deep-cycle battery with my Astron as a backup.

Anyway, thanks to all who responded.

No, not such a good answer.

If the transceiver has cut the power back to substantially less than 100 watts, how did the wattmeter come to read 150 watts forward and 50 reverse? Suppose the transmitter has cut its output power back to, say, 50 watts. The original posting said that the wattmeter reads 150 W forward and 50 reverse, which is 100 watts of real power. So where did the other 50 watts come from? No, if the transmitter has cut its power back, it's cut it back *to* 100 watts, not *from* 100 watts.

If the wattmeter is reading 150 watts forward and 50 reverse, there's 100 watts flowing through the wattmeter, delivering 100 joules per second of energy to whatever's connected to the wattmeter output. Period.

Right, I think people are reading more
into my question than intended.
Whatever the status of the source,
its deflecting the wattmeter to 150W.

Now for another question:
To recap, we have a transmitter>jumper>wattmeter>feedline>load
typical 50ohm ham 2m setup lets say. The wattmeter (bird 43 for example)
reads 150W forward and 50 reflected.

How much power is dissipated by the load?

100 watts plus or minus 5% of full scale minus the losses in the tuner and coax.

I would propose that MS and their fleet of lawyers nail a few of the big time abusers and/or provide configuration assistance to the abusive ISPs that allow spamming in the first place that would exclude 'their' name.

I know it won't happen, but thats my proposal.

-Bill

posting under different names that could be configured to exclude hotmail addresses.

Yup, just like the old ham sheets, you got to do your research first.

Learn a lot from watching old and new auctions, learn about the equipment and
what the rigs look like so you can also use this info at the local hamfests.

I've done over 90 deals, always been satisfied, just do business with those that

have high feedback and you should be ok. I've built a nice two radio hf station

by using ebay for selling my old stuff (machine tools etc.) to buy hf rigs.

Just like the swap meets, you can always walk away poor and with junk.

FWIW, most of my current station came via e-bay and I am quite happy with it. When substantial amounts of money are involved, I have called the seller and talked about the unit. This has been helpful, but maybe I have been lucky.

Given the venue ---- an unregulated, mixed bag of people selling things, sight unseen, with no overseers involved --- I think e-bay works fairly well. If you don't like this setup, then go elsewhere. There is always a risk involved in this type of thing.

Source record: 36580

I know what you mean. I try to play thing on the up and up. I did bid on one item, and I should have checked the seller's feedback, because there were descriptive terms such as "crook", "thief", etc. I called up the fellow and told him that I didn't feel comfortable buying from him with that kind of feedback, so I just sent him 5 dollars to cover for his listing fee. On another note.....the problem with feedback is that you don't know if a person's friends are leaving it. Now, if a person has at least a hundred hits, that might be a different story.

Pete

>W2WO

Bill is quite correct, and patience is important. I had some gear I
was interested in and must have placed bids on 15 pieces of the item I
wanted. Eventually, I got a seller that posted a fuzzy, nasty picture
and I won. Got it for about 35% of the going price, and it turned out
to be a very nice unit.

Also, prices do vary with the seasons. If you want it cheap, save
your money for August when everybody is on vacation and fewer people
are on the radio. There is plenty of stuff that moves for big
discounts in the late summer, but prices shoot right back to normal in
September.

Bottom line, between auctions and private sales, I built a complete HF
tri-band station (CW only) that puts out 90 watts and my TOTAL cost is
about $65. Total means key, antenna, feed line, radio, VFO, etc. plus
a few minor repair parts. It took me a few months to get it all
together, but where else can you have this much fun and meet so many
nice people for just $65?

Yep everyone is correct!

100 Watts out of the transmitter, 100 Watts [minus small losses] into the
load, and...

Ba da bum...

that so called "reflected power" must then be just a fiction!

Why the hell do we need "reflected power"

And... in the words of the imortal Jackie Gleason... "away we go!"

Heh, heh... now that sounds like a lot of bafflegab to the uninitiated!

It's really pretty simple I think, here's I Smac's setup...

radio>jumper>wattmeter>coax>load
^ ^
100W 100W

100Watts supplied from the radio, 100Watts delivered into the load, and...

Ba da bum...

50Watts of "Reflected Power" held in the wattmeter for later use in case
it's needed
to supply power to the computer calculating the SWR?

What?

Nope, 50 watts of reflected joules/sec interfering with 150 watts of
forward joules/sec to cause the impedance transformation represented
by an SWR circle of 3.73:1 on the Smith Chart. The reflected energy
is being used for impedance transformation and therefore cannot be
used for any other purpose. How can I break you from trying to use
the same energy for two different purposes? Do you try to use the
same energy for powering your computer as you do for drying your
clothes?

If you calculate the time it takes for the generated wave to reach
the load you can calculate exactly how many joules of energy are stored
in the reflected wave. For instance, if the transmission line is 100
nanoseconds long, there will be 5 microjoules of energy associated with
the 50 joules/sec of reflected power. There will be 15 microjoules of
energy associated with the 150 joules/sec of forward power. If the
system were flat (matched), there would be only 100 microjoules of
energy stored in the transmission line.

My Yeasu Ft-920 seems to work great and I love the radio. However, I can't seem to get more than 85 watts out of it in the high power mode. My power supply checks out plenty heavy duty and the dummyload is okay (I tried it on an antenna too...same thing). I went in and did the factory suggested software power change to up the power to 125 watts, and still, only 85 watts out max. Do I have a PIN diode out or is something wrong with the finals or elseware? Any suggestions?
thanks, Mike.

Not all of that 100W (minus small losses) will be transferred to the load
unless the load is matched to the transmission line impedance and purely
resistive- reactances don't absorb power.

> Ba da bum...
>
> that so called "reflected power" must then be just a fiction!

and the bit that isn't transferred to the load is reflected back down the
line as refelcted power.

Think of an analogy. Light is reflected from a window because the refactive
index air and glass differ. If you could made the glass with the same
refractive index as air you would get no reflection and all the light (less
abit lost in transmission) would pass through the glass.

The refractive indices of the air and glass correspond to the impedances of
the glass and air. The light reflected back is the reflected power.

>
> Why the hell do we need "reflected power"
>

So we can deduce the reflection coeff. and, by suitable calibration of a
meter scale, indicate the VSWR or just SWR.

Now there is a Brit who denies SWR exists but we don't take him seriously.

6381. WANTED: Raytheon / Apelco / Webster

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-04 22:04:09 UTC
From: k5dh@raytheon.com
Message-ID: <tZuH9.123$Z74.849@dfw-service2.ext.raytheon.com>
Source record: 36592
Cross-posted to: rec.radio.swap,rec.radio.cb,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

As always, I am looking for 1960s and early 1970s
CB radio equipment from Raytheon, Apelco, and
Webster to fill holes in my museum collection.
Here is a list of specific models that I need to
complete the collection:

RAYTHEON:
Tube-type: Raycom
Solid-state: Raycom III, Raycom IV (AM/SSB),
Ray-Tel TWR-11, Ray-Tel TWR-11T
Handheld: Regal Ray-Ette, Super Ray-Ette, MW-2

APELCO:
Solid-state: AR-15, AR-16, 565

WEBSTER:
Solid-state: Bandspanner 550

ALLSTATE (sold by Sears):
Tube-type: 832.62270

AIRLINE (sold by Montgomery Ward)
Tube-type: GAS-587

I would be interested in hearing about any Raytheon,
Apelco, or Webster CB gear that you might have, even
if it's a duplicate (I'm always looking to upgrade
models that I already have). I'm interested in any
"parts rigs" that might be collecting dust also.

In addition to the radios themselves, I am seeking
any kind of related printed matter, including dealer
sales literature, owner's manuals, service manuals,
magazine ads, magazine articles, and so forth.

If you are a vintage CB collector and have any models
in your collection that I need a photo of, I'd like
to work with you on that.

If you ever had any involvement with CB gear from my
target brands, whether it was sales, service, worked
for that branch of the company, or whatever, I'd love
to hear from you as well.

If you have any interest in vintage CB, please visit
the Raytheon/Apelco/Webster CB Radio On-Line Museum:

http://www.qsl.net/k5dh/raytheon.html

DISCLAIMER:
For those hams who are offended that I placed an ad for CB equipment on ham radio newsgroups, I need to point out that the overwhelming majority of radios, printed matter, and historical information that I've collected so far has come from hams, not from CBers! Perhaps that's because so many of today's hams were CBers "back then".

Thanks and 73,
Dean K5DH

I'm posting this for N5BDR, who's isp is currently having probs with usenet
access.
So please email him directly at n5bdr@arrl.net.

Looks brand-new. It's sat in the box unused for nearly 2yrs, except for the
few times I played with it at the start. I just never got around to buying
the needed antennas. Asking $450 + shipping for it and all original parts.
Thanks.

|Not all of that 100W (minus small losses) will be transferred to the load
|unless the load is matched to the transmission line impedance and purely
|resistive- reactances don't absorb power.

You obviously haven't been following along. The reflected power has
already been accounted for. The net forward power is 100 W. All of
it is dissipated in the load.

Furthermore, "matched to the transmission line impedance and purely
resistive" are mutually exclusive when the line has loss.

A slightly reactive load can present a better match to a reactive
transmission line (i.e. one that has loss) than does a load that is a
pure resistance. So, a purely resistive load *is not* the optimum
load for a lossy line.

Here's a verbo-visual image that I wonder if it would be correct? If we were to slow things down from say 14 MHz to maybe one hertz or less and could shoot out a single cycle of energy, we would start by seeing the forward needle rise to 100 while the reverse slowly barely lifts from zero. Then we would see the forward needle drop back towards zero (but not all the way unless it was a directional coupler type of circuit) while the reverse crept up to 50. Note particularly that the forward meter hasn't reached zero before the reflected meter starts indicating power....the time delay being simply based on the length of the line. Then the process would be repeated but on the second cycle there would be an increase in the forward indication because the reflected wave is hitting a who-knows-what match at the xmtr output and bounces back in the forward direction.
So logically there is more than the original 100 'watts' reading that was seen on the first cycle. I'll let the math pros have at it because I think this second cycle 'forward' reading gets rather complicated. There is the xmtr out, minus the feedline loss to the load, the amount of reflected voltage due to the mismatch, feedline loss again, then another (possibly unknown) amount of reflected voltage seen at the xmtr output terminal...then its phase relationship with the actual transmitted signal.
The third cycle has all of that plus more...and so on.

The point is that a reading of 150 watts forward and 50 reflected doesn't simply indicate a 'real' output power of 100 watts. It may be pretty close but I suspect there's enough 'if factors' to keep it from being a rule-o-thumb. Based on the same thought, the '50 watts reflected' isn't going to be particularly accurate either after the first cycle.
Maybe there IS a rule-of-thumb that can be applied and possibly it will in fact approach the simplified 150-50=100 once this process has been repeated 14 million+ times in a second.

So yes, time is obviously a factor. Each repeated cycle will increase the voltages read but after a few cycles the voltage addition rules make

it moot since the succesive increases are so small....so its pretty easy to ignore 'time' at 14 Mhz unless one goes back to extract the behaviour of a single cycle or two, in which case, apples are being compared to oranges.

My 2 centavos.

Brian, there you go again, unnecessarily complicating and confusing matters.

Regardless of line and load impedances, all power leaving the generator must
be dissipated in load. There is nowhere else for the stuff to go.

ah Punchinello!

Cecil chooses to employ time to explain things, it is not a necessity
in and of itself.

You certainly have trouble with it being simply Phase which IS heavily
invested in the Smith Chart. Your usual excellent trolling has fallen
in quality this season - too much egg nog? ;-)

Bill:

You are getting very close to a deep understanding of power matching.

It's interesting that you let the frequency go to very low values like
1.0Hz.

OK... now mext let the frequency continue downward from 1Hz towards zero Hz,
go in log
steps, say 0.1Hz, then 0.01Hz, then 0.001Hz until finally in the limit you
reach 0.0Hz.

Now at DC (0.0Hz) does VSWR mean anything?

Is there any reflected power in the system at DC?

What does conjugate match at DC mean?

Will the SWR meter still work at DC?

If not, then what is the magic frequency [fm = magic frequency] below which
all reflections stop and VSWR becomes meaningless and why?

Food for thought. If a theory/visualization of reflection dynamics is to be
valid, then it must be valid for all regimes, from DC up to the highest
frequencies, otherwise it is invalid.

Think about it...

> be dissipated in load. There is nowhere else for the stuff to go.

Well maybe not in your set up as you claim to have no transmission lines.

However, most people do and all have losses. A 3dB feeder loss means 1/2 the power never even gets to the load, any reflected power is also attenuated by 3dB before being bounced back again by toward the load. That is why you can use a long length of coax as a dummy load- even if it is unterminated- in that case nothing gets dissipated in the load it all does in the line.

Try a worked example: 10W from the tx to a line with 3dB loss to a 25 ohm load (all in a 50 ohm system)

Forward line loss is 5W, 2.5W goes 'into' load, and 2.5W is reflected. Of the 2.5W reflected 1.25W is lost in the line on the return journey.

Even ignoring any more reflections (at the tx back to the load) the line is dissipating 6.25W and the load 2.5W and there is only 1.25W to 'share' on future trips. That power seems to have found somewhere else to go other than the load.

Out of curiosity, which type of generator (perfect or Thevinin) do you assume in your 'analysis' ? I suspect that is where you are going wrong.

Reg, you call the SWR meter a TLI if you want but you do the hobby (esp. newcomers) no favours by your ill thought out ideas.

The way I see it, AC is AC no matter how you slice it. It won't ever be
DC. There is a distinct dividing line between the two even if you get
down into the cycles-per-century scale.
Of course then again, the 'time' context matters in such a case to
distinguish the two. Same as it does in visualizing SWR.

That is fairly normal as far as band to band. 10m will usually give
less indication than a lower band.
>
> Even inside of 7.0 band the situation was like this:
>
> frequency 7.0 7.15 7.3

Looks normal to me. The radio should be peaked for the middle of the
ham band.
That seems to be the case on yours.
>
>
> Maybe some components are with difficulties.

Maybe, but I'd do a total full alignment on the whole radio first. Did
your tweaking improve the sensitivity? If you hear a noise increase
when you peak the "drive" , you should have enough sensitivity.

Take care Brian, Reg actually knows how SWR meters work, he as an excellent program on his site explains the internal circuit and workings of those venerable
and mis-named devices and he has a free program on his site that will help you to
design your own TLI/VSWR meter. Check it out.

It's all really very simple here's the full details in the one neat mathematical equation emulated by
most every so-called "[V]SWR meter ~ B = V - RI:

V is the "actual voltage" across the load impedance Z.
I is the "actual current" passing through the load impedance Z.

Z = V/I ~ The unknown impedance, |V/I| is the magnitude of Z, and theta = arctan(Im[Z]/Re[Z]) is the phase angle of Z.
R ~ The "arbitrary" reference impedance. Most use R = 50 Ohms resistive, but it could be anything depending upon
what you wanted to do with your meter.

A = V + RI ~ The ficticious forward voltage, calculated by the "internal" analog computer in the VSWR meter.
B = V - RI ~ The ficticious reflected voltage, calculated by the "internal" analog computer in the VSWR meter.

P = V*I cos(theta) is the "actual real power" dissipated in the real part of the load impedance Z.

When V = RI then the TLI indicates that B = 0 and the load is "matched".

What could be simpler. The TLI a concept whose time has come.

No reflected power needed!

Oh I'm aware of Reg's work.

Problem is that the theory isn't exactly new and I get irked when someone rehashes an old idea and just ends up confusing things. Reg used to post in one of the uk groups but stopped when his 'new' theories were 'uncovered'.

We have enough problems with people knocking our new licensees (the Foundation Licensees, like the old US Novice) the last thing you need is someone confusing the technical stuff they are learning!

6410. portable speaker advise needed

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-05 05:01:48 UTC
From: elfa <elfa_member@newsguy.com>
Message-ID: <asmmjs01bfc@drn.newsguy.com>
Source record: 36422

I'm looking for a set of portable battery powered speakers
that turn on when the radio is turned on.

I already have a set of Sony APM-090's that fill the bill
but Sony doesn't make them anymore. I just want to turn the
radios ON/OFF without have to do the same with the speakers.

Anyone know of anything?

elfa

|Oh I'm aware of Reg's work.
|
|Problem is that the theory isn't exactly new and I get irked when someone
|rehashes an old idea and just ends up confusing things. Reg used to post in
|one of the uk groups but stopped when his 'new' theories were 'uncovered'.
|
|We have enough problems with people knocking our new licensees (the
|Foundation Licensees, like the old US Novice) the last thing you need is
|someone confusing the technical stuff they are learning!

No fooling. Particularly when that someone is claiming that a 25 ohm
load in a 50 ohm system is reflecting half of the incident power.
(That someone is you by the way...)

"Try a worked example: 10W from the tx to a line with 3dB loss to a 25
ohm load (all in a 50 ohm system)

Forward line loss is 5W, 2.5W goes 'into' load, and 2.5W is
reflected."

Tsk tsk. Now tell Reg you're sorry.

The best imported english beer that I have drank in Texas, was
Whitbread. Funny name, but pretty tasty beer.. Yep, Bass is pretty
ho-hum...I don't drink much anymore really. I used to like heineken
dark until they changed the recipe and pretty much ruined it. I guess
that was like 15?? years ago or so when they did that...Most american
lager beer tastes like chemical backwash, although many of the new
small U.S. "microbreweries" are catching up to EU standards pretty
fast. MK

>

Let me run it past you again- it wasn't 110% clear:

10W into line.
5W lost in line (lost =converted to heat)
of the OTHER 5 W (that gets to the load), 2.5 goes 'into' load, and 2.5W
is reflected.

Of that reflected 2.5W, 1.25 is lost and 1.25W will get back to tx output.
Now, do you know what happens next?

Incidentally, the SWR meter at the tx end would read about 1.1 due to the
line losses. Which is why you need to use the SWR meter with caution.

The example was chosen to illustrate that the power CAN 'go' elsewhere than
the load- in this case mostly into heating the coax.- not to justify the use
of the SWR meter.

Funny taste in beer you have ;-)

When I last visited Ft Worth I was taken to a very nice country / golf club some miles of town (NE I think). They served Newcastle Brown Ale, but they served it cold. The barman was most insulted when I asked for a less chilled bottle. Even when my host explained that Geordies (as people from that part of England are known) are weaned on it and so knew how it should be drunk, he still thought I was most odd.

>Funny name, but pretty tasty beer.. Yep, Bass is pretty

I quite like US beer- draught Mic esp. 'Bud' is a bit syrupy for my taste.

It is odd that many people un Europe rave about German and Belgium beer (which I like) but knock US beer and, to me, they are much the same.

Either way, there is more to the US than beer- wonderful country and people I can't wait to visit again.

>
Assuming that the transmitter is properly matched to the load
impedance it is looking into (via a matchbox perhaps), the 1.25W gets
reflected back towards the load. My question is what happens if the
transmitter is not properly matched to the load impedance?

That's why transmission losses increase with SWR, the power is
subjected to the same loss multiple times as it travels up and down
the feedline. With the "typical" HF installation however the feed line
loss is not high enough for the SWR to make any significant difference
in total power transferred to the load. Many people mistakenly think
that 50% reflected power means only half the transmitter power gets
radiated by the load - the result being that we often worry way too
much about SWR.

|Don't you have reactance in the US?

Yes, but where is it in the example you pose?

You said:

|(Quote) Try a worked example: 10W from the tx to a line with
|3dB loss to a 25 ohm load (all in a 50 ohm system)

|Forward line loss is 5W, 2.5W goes 'into' load, and 2.5W is
|reflected. Of the 2.5W reflected 1.25W is lost in the line
|on the return journey. (End quote)

I don't see any mention of reactive loads in your proposition.

Let's forget the line loss for the moment and deal with the 5W you
claim are incident on the load:

A 25 ohm load in a 50 ohm system has a vswr of 2:1, reflection
coefficient of 0.333, or return loss of 9.5 dB.

This latter number says that only 11% (.55 W) of the incident power is
reflected, not the 50% (2.5W) that you claim.
|
|I thought it was the land of plenty.

It is, and plenty of people are trying to sneak in illegally to
partake of the goodies. Most of brown-skinned ones in my area are
partial to Bud Lite which is one more reason to round them up and send
them home.
|
|Can you selectively get rid of it so easily or is it all or nothing?

I've found that inserting a reactance of equal magnitude but opposite
sign gets rid of it every time. <g>

I had the same problem on the IC-910 VHF/UHF transceiver from ICOM.
It came out that the losses in the power supply cable made a small voltage
drop that killed a fraction f the total output power. When I used a shorter
cable it worked fine.

> thanks, Mike.

What is the power supply voltage? It's probably a bit lower than
"normal", or your regulation may be lacking a bit, and the voltage is
dropping under load.
Also, as one said, in SSB you need a peak reading meter to see full
output. And the meter must be a "true" peak reading meter, not a
psuedo passive peak reading meter. A passive peak reader usually reads
only about 80% of the true output. But any meter should be accurate on
a CW carrier. Myself, I don't think it's really worth worrying about
too much. It doesn't sound like anything is wrong with the radio.
Also, it's unlikely anyone could really tell much difference between
85w and 125w on the air. Less than 1/2 s units difference if you
assign an S unit to equal 6 db. MK

25 ohms at 65 degrees would just about do it. :-)

AHH, what you need, is my never-used, never-installed and still-new
1972 Raytheon DE-732 (I think) depth sounder, complete with unused
original transom-mount transducer & cable - the original and popular
neon flasher in the round case.

I have for sale in excellent condition an Azden PCS-6000H 2 meter mobile rig...It comes with the original manual and has the touch tone keypad microphone and dc cable. I do not have the mobile bracket for it...The power output is 10 watts low and 45 watts high. It receives from 118.000 to 173.995 MHz aircraft AM to FM and transmits 140.100 to 149.995MHz. Modifiable to all MARS and CAP frequencies....It holds 20 memory channels. and has a built-in PL tone board.....I will take $75 plus shipping and can be reached at (508) 821-2993 or email.

To those of you who may have some insight....I have a Kenwood TS 440AT... in decent shape, not abused. Actually, rarely used! Once before the VFO dial got a bit sticky or was "dragging" within it's pit when turning. I corrected it then but can't recall how. A lube I think! Someone sent me the info back then when I was collecting all types of repair tips, and the damned disk won't open now for me to read it.

About a couple weeks ago, it started to "drag" again.. Now, when you turn the dial - it drags, but the frequency doesn't change..... Any ideas on cure? All is appreciated. Thanks!

Please reply directly....I don't always get the newsgroups or get to read them.

[snipped the carefully trimmed quote from my message that made it
appear that I stated untruths that were actually Brian's]

|Let me run it past you again- it wasn't 110% clear:

That's for damn sure, you are totally confused.

One more (hopefully the last) time. A 25-ohm load in a 50-ohm system
is a 2:1 VSWR. A 2:1 VSWR equals 9.5 dB return loss or 0.51 dB
mismatch loss. That means the reflected power at the load is 11% of
the incident power. It is *not* 50% of the incident power.

Eighty-nine percent (4.46 W) of the incident power is dissipated in
the load on the first trip. If you want to account for the 25% of the
11% reflected power that makes it back from the generator on the
second trip, be my guest. After all is said and done, 4.6 W is
gobbled up in the load.

|
|10W into line.
|5W lost in line (lost =converted to heat)
|of the OTHER 5 W (that gets to the load), 2.5 goes 'into' load, and 2.5W
|is reflected.

B.S.

|
|Of that reflected 2.5W, 1.25 is lost and 1.25W will get back to tx output.
|Now, do you know what happens next?

I do, but obviously you do not.

|
|Incidentally, the SWR meter at the tx end would read about 1.1 due to the
|line losses. Which is why you need to use the SWR meter with caution.

No, it will read 1.4:1. Which happens to equal 15.5 dB return loss
which is the 9.5 return loss of the load and two times the line
attenuation.

Aghh! Yes, I know. To indicate that the power could be dissipated in other
places than the load- ie in the line. Which is why I didn't what to ignore
it. I usually find that ignoring something you are trying to demonstrate is
an unproductive approach.

I think you are arguing for arguing sake.

But all you have done is inject another factor before you have grasped
the point made by all of the other correspondents, who actually
understand the original proposition.

I dare say almost all of the regular participants in this group
(r.r.a.a.) are completely aware of the effects of line loss and don't
need a lecture from you about it.
|
|
| I think you are arguing for arguing sake.

Quite the contrary. I am trying to get you to see and/or admit your
mistakes. It was you that stated, "...the last thing you need is
someone confusing the technical stuff they are learning!"

Here, for once, we are in total agreement.
```

Now, let me pose a simple question for you that requires no more than a yes or no answer:

In a 50 ohm system does a 25 +j0 load reflect 50% of the power incident on that load?

[ ] Yes

[ ] No

When we get this cleared up, we can move forward.

Thanks everyone for taking the time to answer my question(s)
I wonder if anyone could point out the error in my thinking,
and hence the reason for my original post.

I will lessen the severity of the example to help focus my question:

I have a VHF FM radio deflecting a Bird wattmeter to 100W forward
and I observe 10W reflected. (radio>jumper>meter>feedline>load)

Coax losses aside, If 90W is produced by the source and 90W is dissipated
by the load, where does the 10W come from?

I'm having a problem with conservation of energy, and obviously
must be missing something.

Thanks,
Smac

The 10 W was put into the line in the first few nanoseconds after you applied power. Let's take the extreme and easily analyzed case of a lossless half wavelength 50 ohm line that's open at the far end. You turn on your transmitter, and it doesn't immediately know that the line is open at the far end. It merrily dumps 100 watts into the line, which it can't tell from a 50 ohm resistor. On the line are 100 watts forward and zero reverse power. The voltage and current waves arrive at the far end and reflect, arriving back at the input after a round trip. There, they encounter the signal still being applied from the source, resulting a complete re-reflection at the input end of the line. At that moment, the apparent impedance seen by the source jumps from 50 ohms to infinity. (What it sees looks like another source producing exactly the same voltage as it is, so current flow from the source ceases.) The source quits putting any power into the line since it's now looking into an apparent open circuit, but the re-reflection provides exactly the same voltage and current for the forward wave that were formerly provided by the source. So the forward wave, initially generated by the source, is now being furnished entirely by the re-reflected reverse wave. On the line, you've got 100 watts forward and 100 watts reverse, forever (remembering that our line is lossless). If the line were 100 ns long (one way), the transmitter would have had to provide 100 watts for 200 ns, a total of 20 microjoules of energy, until the reflection got back after initially applying power. That's where the energy on the line came from. Any time after the line is charged (that is, after the initial reflection hits the source), we can disconnect the source without any effect on what's happening on the line. The 20 microjoules of energy is bouncing back and forth on the line, and a magical lossless directional wattmeter inserted anywhere along the line will read 100 watts forward and 100 watts reverse. If you put a 50 ohm load on one end of the line, you'd get 100 watts into the load for 200 ns as the line discharges. (That, incidentally, is exactly the way they used to make radar pulses, although it was DC rather than RF applied to the line. A thyratron was used as the switch to charge a line -- usually a lumped element substitute --, which was then discharged into a magnetron. The reflected wave turned the thyratron off.) If you put any other load with finite resistance on the end of the line, you'd still get 20 uJ out, but at a different rate (that is, less power for a longer time).

Your SWR is 1.9:1. Your load is accepting 90% of the incident power
and reflecting 10% of the incident power. The 10W is energy generated
by the source but not accepted by the load, i.e. the generator has
generated more power than has been accepted by the load. Those conditions
happen during the transient buildup to steady state.

If you want to visualize what happens, consider a one second long lossless
transmission line. After one second, the T-line contains 90 joules. After
two seconds, the T-line contains 99 joules, ... after 'n' seconds, the T-line
contains 110 joules at steady-state.

Its most likely not going 'into' the radio but instead being
re-reflected again in the forward direction...or a least a substantial
portion of it.

The SWR is only 1.9:1 and can be considered a reasonable match. My IC-756PRO
doesn't start folding back until the reflected power reaches about 15W.

So your saying that my radio produces 100W
and my load dissipates 90W ?

Your radio is actually producing the 100 watts measured as "forward power." The 10 watts "reflected power" is going back into the radio. Thus only 90 watts (i.e. 100-10) is being delivered to the feedline. Depending on the feedline loss, something less than this will be delivered to the load.

This is too much reflected power and you can potentially damage your radio. You need to match the impedance of the feedline+load to the impedance of your radio. Perhaps your antenna is too long or too short but either way you need to fix this.

No, it's not going back into the radio. It's bouncing back and forth in the line. My favorite example is a 141.4 volt RMS voltage source connected to an open circuited half wavelength line through a 50 ohm resistor. Within a few nanoseconds of turning the source on, there's 100 watts forward power and 100 watts reverse power in the line, the 50 ohm resistor dissipates nothing, and the current into and out of the source are zero; it neither furnishes nor dissipates power.

It's not reverse power that can damage a rig. What causes damage is operating into an impedance it's not designed for.

*** post for FREE via your newsreader at post.newsfeed.com ***

Hi there !

THIS IS NOT A CRACK or SERIAL - but works "as effective as"......
(this works with an expired, extended or a freshly intalled version)

If you can't find some of the files mentioned here go ahead with the next
step......

Instructions for extending the MRP40 trial time:
---

1. First some preparatory steps:

- Go to your windows directory (e.g. C:/WINDOWS/ or C:/WINNT/)

- Delete the file netdet.ini (in this file your installation date is
stored)

- open the file win.ini and delete ALL the [MRP40] section entries

- if your version is expired look for a "hidden" (File attribute) 0-byte
sized file with a filenname equivalent to your MRP40 serial number. (you see
the serial number on the lower left corner on the start-up screen) -
Delete it !!!

2. Generate the new "Key file" that will allow a very long trial period:

- Set your system time to an advanced date (e.g. 5 years ahead)

- Start MRP40.EXE

- Your MRP40 will be expired (because of the very advanced date)

- Press "register" and type the key "extend" and type any User name - then
exit MRP40...

- restart MSP40 now.....you have 15 days trial (still at advanced date) -
exit now MRP40

- Congratulations ! Now you have "theoreticaly" a key file that will expire
in e.g. 5 years !!!

3. To make use of this "advanced" key file you still need to do this final
steps:

- Go to your windows directory (e.g. C:/WINDOWS/ or C:/WINNT/)

- Delete the file netdet.ini

- open the file win.ini and delete ALL the [MRP40] entries

- Go to your MRP40 directory (e.g. C:/PROGRAMS/MRP40/)

- delete the "hidden" (File attribute) 0-byte sized file called data.dat

- Set system time back to your actual date

READY !!!!!!

After completing the steps above and you start MRP40 Morse Decoder, you will have an expiry date in 5 years + 15 days (1841 days) ;-)

This works well with the current version 4.044 - but this "workarround" maybe blocked in future versions.

Good luck,

73 !

No, during the transient buildup to steady-state, not all the power
produced by your transmitter makes it to the load. Standing waves
require a certain magnitude of extra energy. That amount of energy
is not available for any other purpose since it is being "used" to
achieve the steady-state standing wave status. Once steady-state has
been reached, the transmitter continues to output 90 watts, the load
continues to accept 90 watts, and a certain magnitude of energy is
"stored" in the transmission line. The higher the SWR, the greater
is the magnitude of energy needed to support the standing waves.

> thanks, Mike.

When I was working as a repair tech on Yaesu Radios I saw this problem once and after a couple of hours of frustration I traced it to the supply board in the radio. There is a one turn coil used as a shunt for reading current and one end of it had a cold solder joint that under load would cause a small drop. Might not be your trouble but it is something to look at if all else fails. Bob N4BK W4RT Electronics.

6468. CAT/Logger for FT990

First things first...
Happy Holidays to Keyclowns and Anti-Keyclowns alike.

There was a hamfest in the Detroit area which a few of us
Anti-Keyclowns attended last Sunday. Who did we see, with about a 3
day beard, homeless shelter type clothes and a glazed expression on
his goofy face????? None other than Chukkee Sukkee herself!

Chukkee was so goofed up in the head he didn't even recognize us
Anti-Boys, although he had met one of us under very bad <for him>
circumstances in September. He called one of us "Mike", a name which
none of us carry, and mumbled incoherently at our table of antique
radios, variacs, antennas, modern transceivers, etc...and departed the
scene hastily.

Chukkee Sukkee can say things like "puff a root, dickhead", etc. , but
has absolutely no power or credibility. This lying toad of a human
being has said the following things on the NG's, all proven false:

1. He works for Jeff Roush racing
2. He has a concealed weapon permit<he ADMITTED THIS WAS A LIE IN
SEPTEMBER>
3. He is affiliated with a gang called the Latin Counts
4. He is affilaited with a bike gang called the Iron Coffins
5. He owns a .45 caliber pistol
6. He owns a 9 MM pistol
7. He has faced down police officers over his pistol. <he calls police
officers "pigs" in his posts>
8. When accused of selling illegal radio equipment Chukkee Sukkee
vehemently denied doing so. That is, until an enterprising amateur
looked up his advertising for sale of illegal amplifiers on
various
amateur radio and CB forums. This documentation drove him back
into the woodwork a while.

Chukkee Sukkee says these things to make himself appear to be some
sort of a formidable human being. When confronted in person he wilts
like a dandelion hit with weed killer. For example, Chukkee Sukkee
threatened in rec.radio.cb to shoot people with a 9mm pistol at the
Findlay, Ohio hamfest in September, 2002. The persons he threatened
walked up to his table and asked him if he wanted "to settle the hash
now", and he could not have been faster to stretch out a hand to shake
if he had a spring loaded elbow.

In late 1999, he lost an ISP because he threatened another amateur with raping his wife and daughter, killing his dog, and doing a drive by shooting on his home. The local police and the Toledo office of the FBI became interested in Chukkee Sukkee recently because of his long record of violent threats to people in newsgroups. The Lincoln Park, MI Police dept. paid Chukkee Sukkee a visit in September, 2002 because of these threats. After the cops were done with him, Chukkee Sukkee whined like the cowardly person he is, and posted to rec.radio.cb a long and lying denial of making any violent threats, and specifically admitted he had never owned a hangun or had a CCW permit. This admission ran counter to the fact that he had stated many times he owned either a .45 caliber or a 9 MM pistol, and had a CCW permit. This exposed the lies, of course.

There is now an outstanding warrant for Chukkee Sukkee's arrest in Lucas county, Ohio for meancing as a result of his violent threats. The Anti-Keyclowns have a copy of the police report in our posession. This will be made available to anyone who wants it, as it is public information. Email us for details.

Chukkee Sukkee should be considered a fat mouthed idiot, and very desperate to belong to some group or organization. He has been rejected by most rational persons, and will continue to be until he moves somewhere that has a population that has never been exposed to his moronic actions. <the planet Neptune, maybe?>

In summary, we have among us a lying idiot who has obvious psychological issues. He is prone to violent threats against people, even women, children and pets. When confronted, though, he shows a spineless, yellow, cowardly nature.

If Chukkee Sukkee is smart he will stay in Michigan. If he gets confronted by any LEO in Ohio he may be on a road he does not wish to travel. Chukkee Sukkee makes a big blatting issue of the fact that he was at the Toledo hamfest last year and that his truck and his carcass emerged unscathed. Fact is, no one threatened either. It is Chukkee Sukkes's mentality, however, that most intriguingly emerged in the dust up over this situation last March... Why would anyone be concerned about their auto being damaged unless: A> They are in the habit of damaging autos and have that mid set, or B> They are guilty of doing something bad and expect retribution?

Laugh if you will folks, but Chukkee Sukkee is a sick puppy.

Dear Brian,

Regardless of line and load impedances and what the swr meter may be reading, if the line is sensibly lossless then all the power output from the transmitter must be dissipated in the load. Where else is the power to go?

How can a professional possibly disagree with such a simple and obvious statement?

By George, I think you've got it!

What? No more *reflected power* sloshing back and forth longitudinally
along the line between the ends, just pure *stored energy* sloshing back
and forth transversally *across* the line between the distributed
capacitance
and inductance of the line, like in a tank circuit.

Neat, now we can do away with all of that re-reflection of power gobbledy
gook.

Peter, you've got the energy in the wave confused with the carriers of the wave. Do water molecules move along with the ocean waves? No, but the energy in the ocean wave rides the water molecules sometimes from coast to coast. The water doesn't slosh back and forth but the waves travel back and forth. The water travels primarily up and down. Have you never overlooked a beach where the big waves were coming in and the small waves were going out transparent to each other? In a length of transmission line with constant Z0, the forward wave is transparent to the reflected wave.

It is impossible for forward and reflected waves to affect each other unless they encounter an impedance discontinuity where reflections and/or interference occurs. The energy in the wave crashing on the beach is being carried by water molecules that were there close to the beach all the time. Something just gave those molecules enough energy to retreat from your ankle level and then crash on your head.

If you are saying the electron carriers don't slosh back and forth, I would tend to agree with you. Electrons certainly travel much, much slower than the speed of light wave energy being carried by the electrons.

On 6 Dec 2002 07:28:55 -0800, chukkeedacriminal@yahoo.com (The truth
about ChukkeeSukkee) was blabbling:

...First things first...
...Happy Holidays to Keyclowns and Anti-Keyclowns alike.
...
...
...There was a hamfest in the Detroit area which a few of us
...Anti-Keyclowns attended last Sunday. Who did we see, with about a 3
...day beard, homeless shelter type clothes and a glazed expression on
...his goofy face????? None other than Chukkee Sukkee herself!
...
...Chukkee was so goofed up in the head he didn't even recognize us
...Anti-Boys, although he had met one of us under very bad <for him>
...circumstances in September. He called one of us "Mike", a name
which
...none of us carry, and mumbled incoherently at our table of antique
...radios, variacs, antennas, modern transceivers, etc...and departed
the
...scene hastily.
...
...Chukkee Sukkee can say things like "puff a root, dickhead", etc. ,
but
...has absolutely no power or credibility. This lying toad of a human
...being has said the following things on the NG's, all proven false:
...
...1. He works for Jeff Roush racing
...2. He has a concealed weapon permit<he ADMITTED THIS WAS A LIE IN
...SEPTEMBER>
...3. He is affiliated with a gang called the Latin Counts
...4. He is affilaited with a bike gang called the Iron Coffins
...5. He owns a .45 caliber pistol

...6. He owns a 9 MM pistol
...7. He has faced down police officers over his pistol. <he calls
police
... officers "pigs" in his posts>
...8. When accused of selling illegal radio equipment Chukkee Sukkee
... vehemently denied doing so. That is, until an enterprising
amateur
... looked up his advertising for sale of illegal amplifiers on
...various
... amateur radio and CB forums. This documentation drove him back
... into the woodwork a while.
...
...Chukkee Sukkee says these things to make himself appear to be some
...sort of a formidable human being. When confronted in person he
wilts
...like a dandelion hit with weed killer. For example, Chukkee Sukkee
...threatened in rec.radio.cb to shoot people with a 9mm pistol at the
...Findlay, Ohio hamfest in September, 2002. The persons he threatened
...walked up to his table and asked him if he wanted "to settle the
hash
...now", and he could not have been faster to stretch out a hand to
shake
...if he had a spring loaded elbow.
...
...In late 1999, he lost an ISP because he threatened another amateur
...with raping his wife and daughter, killing his dog, and doing a
drive
...by shooting on his home. The local police and the Toledo office of
the
...FBI became interested in Chukkee Sukkee recently because of his
long
...record of violent threats to people in newsgroups. The Lincoln
Park,
...MI Police dept. paid Chukkee Sukkee a visit in September, 2002
because
...of these threats. After the cops were done with him, Chukkee Sukkee
...whined like the cowardly person he is, and posted to rec.radio.cb a
...long and lying denial of making any violent threats, and
specifically
...admitted he had never owned a hangun or had a CCW permit. This
...admission ran counter to the fact that he had stated many times he
...owned either a .45 caliber or a 9 MM pistol, and had a CCW permit.
...This exposed the lies, of course.
...
...There is now an outstanding warrant for Chukkee Sukkee's arrest in
...Lucas county, Ohio for meancing as a result of his violent threats.
...The Anti-Keyclowns have a copy of the police report in our
posession.
...This will be made available to anyone who wants it, as it is public
...information. Email us for details.

...
...Chukkee Sukkee should be considered a fat mouthed idiot, and very
...desperate to belong to some group or organization. He has been
...rejected by most rational persons, and will continue to be until he
...moves somewhere that has a population that has never been exposed
to
...his moronic actions. <the planet Neptune, maybe?>
...
...In summary, we have among us a lying idiot who has obvious
...psychological issues. He is prone to violent threats against
people,
...even women, children and pets. When confronted, though, he shows a
...spineless, yellow, cowardly nature.
...
...If Chukkee Sukkee is smart he will stay in Michigan. If he gets
...confronted by any LEO in Ohio he may be on a road he does not wish
to
...travel. Chukkee Sukkee makes a big blatting issue of the fact that
he
...was at the Toledo hamfest last year and that his truck and his
carcass
...emerged unscathed. Fact is, no one threatened either. It is Chukkee
...Sukkes's mentality, however, that most intriguingly emerged in the
...dust up over this situation last March... Why would anyone be
...concerned about their auto being damaged unless: A> They are in the
...habit of damaging autos and have that mid set, or B> They are
guilty
...of doing something bad and expect retribution?
...
...Laugh if you will folks, but Chukkee Sukkee is a sick puppy.

6478. FS: Garmin Rino 120

On 6 Dec 2002 07:28:55 -0800, chukkeedacriminal@yahoo.com (The truth
about ChukkeeSukkee) was blabbling:

...First things first...
...Happy Holidays to Keyclowns and Anti-Keyclowns alike.
...
...

You too Dougie

...There was a hamfest in the Detroit area which a few of us
...Anti-Keyclowns attended last Sunday. Who did we see, with about a 3
...day beard, homeless shelter type clothes and a glazed expression on
...his goofy face????? None other than Chukkee Sukkee herself!
...

Goofy face??? you ain't miss america either dude! yes, I have a
beard.. at least I can grow one...Homeless shelter???HAHAHA...what an
idiot.

...Chukkee was so goofed up in the head he didn't even recognize us
...Anti-Boys, although he had met one of us under very bad <for him>
...circumstances in September. He called one of us "Mike", a name
which
...none of us carry, and mumbled incoherently at our table of antique
...radios, variacs, antennas, modern transceivers, etc...and departed
the
...scene hastily.
...

I walked around twice....was looking for the guy I came with James
Keller W8WW....(whom I have a feeling might have authored this...)

and I might have called you Mike...sheesh...cut a guy some slack...

and for the record....you didn't do jack shit, Dougie...and you
fucking know it....

...Chukkee Sukkee can say things like "puff a root, dickhead", etc. ,
but
...has absolutely no power or credibility. This lying toad of a human
...being has said the following things on the NG's, all proven false:
...
...1. He works for Jeff Roush racing

Jeff Roush....???? I never said that...I worked for Jack Rouch...as in
Rouch Industries Inc. . a job I HATED...Because of the fucking MORONIC
management...you know Morons....like your dumb fucking ass?

...2. He has a concealed weapon permit<he ADMITTED THIS WAS A LIE IN
...SEPTEMBER>

I never admitted anything...

I know what I got, and who said it's registered?

...3. He is affiliated with a gang called the Latin Counts

Again, dougie...you TWIST the truth! I never said I was " affiliated"
with them! I said I know a few of them....and a few owe me a few
favors..

Can't you do anything more original????

...4. He is affilaited with a bike gang called the Iron Coffins

Again, dougie...you TWIST the truth! I never said I was " affiliated"
with them! I said I know a few of them....and a few owe me a few
favors.....

...5. He owns a .45 caliber pistol

Like I said...you don't know what I got...

...6. He owns a 9 MM pistol

see above.....

...7. He has faced down police officers over his pistol. <he calls
police
... officers "pigs" in his posts>

again.....you twist and make up shit....I never said this....period.

...8. When accused of selling illegal radio equipment Chukkee Sukkee
... vehemently denied doing so. That is, until an enterprising
amateur
... looked up his advertising for sale of illegal amplifiers on
...various
... amateur radio and CB forums. This documentation drove him back
... into the woodwork a while.
...

I never DENIED selling them in the past....I don't sell them now....

...Chukkee Sukkee says these things to make himself appear to be some
...sort of a formidable human being. When confronted in person he
wilts
...like a dandelion hit with weed killer. For example, Chukkee Sukkee
...threatened in rec.radio.cb to shoot people with a 9mm pistol at the
...Findlay, Ohio hamfest in September, 2002. The persons he threatened
...walked up to his table and asked him if he wanted "to settle the

hash
...now", and he could not have been faster to stretch out a hand to
shake
...if he had a spring loaded elbow.
...

Now this REALLY FUNNY!

Douglas Adair.....YOU NEVER EVEN FUCKING SPOKE A WORD TO ME...UNTIL I
MENTIONED THE THING TO KEITH KC8TCQ....YOU'RE SUCH A FUCKING LYING
ASS'ED BASTARD!

YOU AIN'T SHIT!

...In late 1999, he lost an ISP because he threatened another amateur
...with raping his wife and daughter, killing his dog, and doing a
drive
...by shooting on his home. The local police and the Toledo office of
the
...FBI became interested in Chukkee Sukkee recently because of his

...This exposed the lies, of course.
...

AFTER THE COPS WERE DONE WITH ME?!?!?!?
BAAAAAAAAAAAAAAAAAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAHAH!

NOT!

AGAIN! MORE BULLSHIT LIES!!!!!! ONE DETECTIVE COMES HERE...AND I
TALKED TO HIM....

SHEESH! DOUG YOUR LACKING ORIGINALITY...

...There is now an outstanding warrant for Chukkee Sukkee's arrest in
...Lucas county, Ohio for meancing as a result of his violent threats.
...The Anti-Keyclowns have a copy of the police report in our
posession.
...This will be made available to anyone who wants it, as it is public
...information. Email us for details.
...

I WANT TO SEE IT FOR MYSELF!!!!

...Chukkee Sukkee should be considered a fat mouthed idiot, and very
...desperate to belong to some group or organization. He has been
...rejected by most rational persons, and will continue to be until he
...moves somewhere that has a population that has never been exposed
to
...his moronic actions. <the planet Neptune, maybe?>
...

YEAH, FUCK YOU DOUGIE....MAYBE I'LL COME DOWN THERE THIS WEEKEND.

AND WE'LL "TALK"

...In summary, we have among us a lying idiot who has obvious
...psychological issues. He is prone to violent threats against
people,
...even women, children and pets. When confronted, though, he shows a
...spineless, yellow, cowardly nature.
...

YOU'RE A ONE TO TALK!

...If Chukkee Sukkee is smart he will stay in Michigan. If he gets
...confronted by any LEO in Ohio he may be on a road he does not wish
to
...travel. Chukkee Sukkee makes a big blatting issue of the fact that
he
...was at the Toledo hamfest last year and that his truck and his
carcass
...emerged unscathed. Fact is, no one threatened either. It is Chukkee
...Sukkes's mentality, however, that most intriguingly emerged in the
...dust up over this situation last March... Why would anyone be
...concerned about their auto being damaged unless: A> They are in the
...habit of damaging autos and have that mid set, or B> They are
guilty
...of doing something bad and expect retribution?
...

MORE BULLSHIT TO COVER THE FACT THAT YOU'RE AN IDIOT DOUG...

...Laugh if you will folks, but Chukkee Sukkee is a sick puppy.

SO IS DOUGIE AND A NO-CODE, 2 FUCKING METER PENCIL-NECKED GEEK!!!!
WITH NO CLASS, NO LIFE AND NO FUCKING JOB....AND HAS TO BUILD 2 METER
ANTENNAS FOR A LIVING...

TELL ME DOUG, WHY DID YOU CLOSE THE RENTAL SHIP IN COLDWATER? PROLLY
BECAUSE YOU WERE SELLING DRUGS OUT THE BACK DOOR AND COLDWATER SHUT
YOU DOWN! YOU SEE, i HAVE FAMILY THERE AND i HEARD ALL ABOUT
IT!!

AND THEN YOU COWARDLY RAN TO CHICAGO!

LATER DOUG...

P.S.....the shit never stops

6486. Kenwood TM2550A with DTMF mic and tone encoder/decoder on eBay for $56

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-06 22:58:34 UTC
From: Joe Mehaffey <joe@mehaffey.us>
Message-ID: <3DF12B9A.57D3D5CC@mehaffey.us>
Source record: 36397

I have a Kenwood TM-2550A on eBay for sale. This is part of the estate
of W3BZ and is in good condition with manual and DTMF mic and power
cable. Please take a look at:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1942671103

This is a 50watt output 2 meter FM transceiver.

Thanks
Joe Mehaffey

6490. Kenwood TS-440 ?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-07 00:17:31 UTC
From: Lou <tech@dp.net>
Message-ID: <asrqmcflk1@news.dp.net>
Source record: 36255

Question.....what types of lubricant are safe to use in the dial mechanism of the Kenwood TS-440 and the like. Mine is frozen solid. I had to fix this once before, but it's been a long time - about 6 years or so.
I can't recall what I used because I lost the note on that particular solution. Are any better than another in action or longevity? Please reply directly as sometimes my newsgroups don't work.... Thanks... Lou/Tech@DP.NET

I get that on all my 12v rig eventually due to slight corrosion, dirt,
etc, on the connectors, fuses, fuse holders, battery connectors, etc.
I have to clean them all every once in a while. Usually gain 10-15
watts every time I do it. The last time was a couple of weeks ago.
Even wiggling the power connector on the rig helps as it rubs and
refreshes the connection a bit. Voltage drops are a real problem on
high current 12v dc rigs. Thats why I use overkill fat jumper cable
wire, anderson power connectors, etc, to reduce the problem. But if
all that doesn't help, the ex-yaesu tech's idea about the solder joint
might pan out..Also every time I go into a radio, I tighten all the
grounding screws on the circuit boards. Icoms are notorious for these
loosening up with vibration.
Probably other rigs too... MK

I use Caig labs R-5 on all DC power connections, reduces contact resistance,
and inhibits corrosion. Pro-Gold, does much the same, also good for audio
cable conncetions too.
Take a look: http://www.caig.com

For those that don't seem to understand the concept...

Load = anything that is attached to your TX. Your antenna is (or should be) the PRIMARY load, but also a part of the total load are the coax (losses and VSWR), ground system, connectors, etc. All of these actually represent a fairly complex series/parallel load to the output of the TX.

Under steady-state conditions with a lossless transmission line,
generated power = power to the load = forward power - reflected power.
90W = 90W = 100W - 10W

Hi guys.

Can anyone give me the connection information on the Ten Tec Delta1 with relation to auxillary sockets, mic and speaker connections. I am looking to interface my pc soundcard to this rig, and have no detail on any of it's connectors.

Thanks in advance of any help

Regards,

Dave G3VFP

Dear Fello Hams;
If you must donate to a cause, pick another because this fellow has never ever made any disclosure to where the donations are going, cash, gear or otherwise in over 22-24 years of doing this scam.
I was promised a disclosure but never received any, hmmmm!
It goes into his pocket and anyone who thinks different should really investigate him with the NYC school system, IRS or Not for profit Government bureau.
Fellow Hams DO need your gifts but make sure that someone actually does benefit from it and does go to pay off car leases, collage tuitions and other ventures.
Be Smart, Ask for a disclosure first!
Let JKJ sell his copyrighted manuals and see how long he lasts(another illegal venture of his)!!
Happy Holidays!
Brian

6509. FS: Electro-Voice mic and Telex headphones

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100 watts HF + 6 Meters. It has a Auto tunner and the MC 100 Desk Mic. I also Have the 3 KW Roller Inductor Antenna Tuner. They are in good shape I will trade both for a FT 990 or a FT 1000.. I have been using the FT 920 as a backup rig.
If you have a FT 1000D I will add a Henry Radio 2KD-5 Amplifier to the deal. 100 watts in gets you about 1000 watts out. It has new caps and a pair of Emac 3-500. It is wired for Single Phase 240. The same voltage that runs your dryer and electric range. I am will to travel 100 miles from Athens GA. Drop me a email so we can work out the deal.
oris@dirtball.com
Happy Holidays

This is a very nice package that I am selling via auction at eBay.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1942287105
If it does not sell at a fair price with this attempt then I will be selling the items separately using local hamfests, auctions, newsletters, ads, bulletin boards...etc. I wanted to offer the items together before splitting them.

Some people volunteered price expectations for the IC-751 alone in response to my post at: rec.radio.swap dated Dec. 4. Sorry about the FA - FS confusion. I'll use "FA" for auctions in the future.

Hi Roger

I would but time is of the essence as I have to ship a unit next week to interface to the rig, and can't wait for prelonged verbal dialogue with the manufacturers. It's a pity they aren't more like Kenwood whom produce a great booklet outlining the connectors for all their radios.

Certainly Roger it would be easier for someone with a Ten Tec Delta II 560 I think it is rather than a Delta 1, to just type in a reply. That's what I have done for others in the past.

Cheers,

Dave G3VFP

Does your wife, girl friend, or person with similar relationship sew? I have three complete ICOM stations; each station consists of PS-55 power supply/AT-150 antenna tuner/SP-3 external speaker/IC-735. The power supply, tuner, and speaker are all same size, transceiver is larger. I had one set of vinyl dust covers that I purchased years ago, somewhere.

Asked my wife if she could sew up dust covers, same size, made of fabric. She looked at the vinyl covers, took a few measurements and said "No problem." I told her any color except pink. She did it -- took a whole day -- and now my equipment is all covered with some very nice woodland camouflage (!!!) dust covers.

I have for sale an Optoelectronics Optocom receiver. Specific details of the Optocom can be found at:

http://www.optoelectronics.com/optocom

This Optocom contains the latest firmware, version 1.5. It also has the Bitbanger addition. Unit is in excellent condition and has been used exclusively in an indoor environment.

Includes AC90 power adapter, telescoping whip antenna, serial cable, Trakkstar software disc and license, instruction manual, and Optoelectronics Utility disc.

Asking $400.00 shipped UPS ground US only. Payment via Paypal or PREPAID WITH US POSTAL MONEY ORDER ONLY!

Reason for selling: I have two of them, and this one is seeing very little use. Liquidating for purchase of other equipment.

Please E-Mail me at kc1ua@scancapecod.net if interested. Thanks for reading.

6530. FREE--ALPHA 78 FACE & COVER--FREE !!!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-08 06:04:26 UTC
From: rong@computer.net
Message-ID: <3df2e074.1172914@news.computer.net>
Source record: 36291
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi all,

I just put on a new face & top cover on my old Alpha 78. I thought I was going to have problems but everything went very smooth. I was advised by Glen at Crosslink that I might have to loosen the 2 meters to align them with the new face, but the face went right on like it was made for my unit. The new face & cover are high quality units with very nice paint & lettering just as you would expect from Crosslink (ALPHA).

Now I have a sticky face & cover to get rid of. I really do not want to throw them away, as I'm sure that SOMEONE out there can make use of them. There is a rumor that if you soak them in water overnight, the stickiness goes away, but I cannot confirm that.

Except for the stickiness, the face is in great shape with the exception of the top left screw hole--somebody had bad aim with their screwdriver and put a few scratch marks there. The cover has numerous scrapes and smudges, but there are no dents or deep scratches.

Now the best part---THEY ARE YOURS FOR FREE---All you have to do is pay me for the shipping which should run under $20, saving yourself almost $200 compared to buying new ones. E-mail or call me at 914 769 3114 M-F 7AM-5PM EST, or all weekend at 845 526 3221 .

Nah, IIRC the wheel fell off his ISP or was it his newsreader...something
like that.

This meant nobody could tell him how to fix it. Don't worry though, he's
using the Cb in his Land Rover instead :-(

From: tim english <te@usol.com>
Message-ID: <62n6vu0mb808fciikqorfgecd4si41o0hu@4ax.com>
Source record: 36201

Brand spanking new Yaesu FT-817 QRP rig. 1 week old, used for 1 hour. Buttons are too small for my fingers. Has just about every feature you can imagine. 4 power levels of .5, 1, 2.5 and 5 watts. Covers 160 meters through 432Mhz, all modes. Comes complete and MINT in box with all paperwork, Yaesu world map, shoulder strap, antennas for 144 and 432, power cord, hand mic (never out of bag) and alkaline battery holder. $525 and I'll pay priority insured shipping to your door. Satisfaction guaranteed !

Hey all, have some brand new aftermarket items for sale as follows:

4 GP300 Lapel Mic: $20ea.

2 Earbud w/collar mic for ear canal: $14ea

2 Earbud w/collar mic for over ear hanger: $15ea

2 GP68 Battery: $24ea

5 GP300 batt w/clip: $22ea.

4 SP50 tall battery: $23ea

All batteries are hi-cap (1100mAh or better) using Sanyo cells, all datecodes are 11/02 so they're only a few weeks old, guaranteed fresh! Accessories use GP300 radio connector so they will fit many models and brands.
All prices excluding freight, pix available and prefer to sell each lot complete (or entire lot with free CONUS shipping.)
Let me know if interested and thanks!

What planet are you from? They all have 6 meters...For the money, I like the 746 and 756....among those you listed 575 is not real competitive any more...Should be able to get a nice 746 or 756 (original style) for under 1000, probably 900 and some shipping..The JST is good to but lacks the dsp and is too much money...both pros maybe a little better but too much money for the difference...FT 847 so so on 6, TS 2000 probaby great but i dont know and doubt the difference would be worth it on 6 meters, 920 soso on 6 meters...thats my opinion, I obviously prefer the Icom, using a 746 pro and dont know any yaesu or kenwood that will beat it...many are close!! 73 Murray K5MDM

I seldom notice top posters. However, a METER is a measuring device. A
Metre is a unit of measurement, as in Kilometre, Metre, Centimetre,
Millimetre. Check the history of where and when it was derived from, you
will find I am correct.

Date: 2002-12-09 03:33:45 UTC
From: radiogib@bellsouth.net
Message-ID: <6a8bf53e.0212081933.2cc95caa@posting.google.com>
Source record: 36230

Hi,

I've a friend who has one of the original 520's with a power output problem. It seems that on transmit, it emits a full scale SLAM of the meter on plate voltage, and no power output. OK for the sake of keeping this story short, does anyone know the transmitter alignment proceedures for this rig including side controls for bias and ac voltage? I believe this unit was set way out of alignment (not by me) and needs just some TLC to get it going again. I've tried another set of finals (used but supposedly good 6146B's) yet according to the set's owner, the rig's doing the same thing. Isn't Ham Radio fun? Thanks for anyone's help in this matter. If you can, please EMAIL me with any possible solutions. garyb@citicom.com

Thanks, and 73 de,

Gary/WB4YQR

6572. RS HTX202 146.76 'birdie' partial fix

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-09 04:33:09 UTC
From: Jim Shorney <jshorney@inetnebr.spamblock.com>
Message-ID: <3DF41D05.503EF9F9@inetnebr.spamblock.com>
Source record: 36233
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Some years ago I came up with a partial fix for the much-discussed 146.76 birdie in the Radio Shack HTX-202. The cause is well documented, but apparenty my mod never made it into the system anywhere. It began when I noticed the signal strength of the birdie was reduced by pressing the 'Lamp' button on the side of the radio. As others have found, I then determined that the signal was radiating from the keypad circuits. The solution was to install a .002 uF chip capacitor directly across the terminals of the lamp pushbutton (other values should work, this is just what I happened to have on hand). While this did not completely eliminate the offending signal, it greatly attenuated it.

Here is the procedure:

1) Remove the four screws from the battery plate, and carefully remove the battery plate and spring.

2) Remove the four screws securing the back of the radio to the front.

3) Carefully pull the front away from the back, taking care not to damage the mylar ribbon cable between the radio halves on the right side of the radio.

4) Lay the radio on your bench and remove the two small screws securing the switch circuit board on the side of the radio.

5) Pull the switch PCB away from the side of the radio, taking care not to damage it's mylar ribbon cable.

6) Pull the rubber switch cover away from the circuit board. You will now have access to the switches.

7) Carefully solder your chip cap across the two terminals on the left-hand side of the Lamp switch (marked LIG on the PCB).

8) Re-assemble the radio and enjoy!

It is possible that other placements for bypass caps will result in more improvement; I was happy with my results, so I never persued it any further. YMMV. Standard dislcaimers apply.

Email comments directly (remove the spamblock), as I don't read this group much.

73,

Jim, NU0C

P.S.: A correction: the 'Zener' in the power/battery circuit that causes heat problems isn't a Zener, it is a Schottkey rectifier diode according to the Tandy service manual.

For Sale: MINT MFJ-9406 six meter transceiver. This rig is a blast! Hate to unload it, but I've got a new FT-847 with 6 meters. GREAT transmit audio! Worked locally and lots of DX using only a three element yagi. CW module installed. Comes with manual, original box, stock hand mic and DC cord. $169 and I will pay for shipping and insurance. If you're short on cash, we can run the transaction through my little Ham/SWL business using your "plastic". First e-mail or phone call gets it. 73 from Bill - WA8MEA, 1.517.563.2613 - http://qth.com/dwm

Sounds like something is open in the plate/screen/cathode circuit of the finals. Look for open choke coils or screen resistor. I used to have a 520, but sold it, and the schematics with it, so I can't troubleshoot further for you.

6575. CTCSS tone setting on the TR-7800

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-09 06:31:05 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <at1db9mou1@news.hawaii.edu>
Source record: 36236

Hi Gang,

Someone gave me a Kenwood TR-7800 sans the manual. Anyone know how to set the CTCSS tone freq'y? There's a push on/ push off switch on the front panel marked "Tone" so I assume that's for the PL tone. I checked under the top and bottom covers for a dip switch thinking that's how the freq'y would be set, but no joy. So the tone freq'y must somehow be set from the front panel keypad.

Thanks in advance, and Merry Christ-Mass to everyone!

Hi

What's confusing me is that I was always under the impression that
maximum power can only be transferred if the Zout from one stage was
equal to the Zin of the next. That being the case, then how could all
of the output power be transferred to the load in a mismatched
condition? What am I missing? Isn't reflected power just that, power
not absorbed by the load being reflected back to the source? Isn't
this what damages circuitry?

Unless I'm totally missing something, I have to answer the original
question this way:

The forward power measurement would be: TX power + Reflected power,
and the load would dissipate TX power - Reflected power, the reflected
power would be dissipated in the source or along the transmission
line, if it were imperfect.

Isn't this the case?

73, Steve

I've personally owned an Icom 706, Yaesu FT-100, Yaesu FT-920, Kenwood TS-60, Kenwood TS-850 with a DownEast Microwave 6 meter transverter, and (currently) an Icom 756 Pro. With a good directional antenna (much more important than the particular rig you use - I prefer a quad for low noise) any rig you have will work well- *if* the band is open. If not, none of them work very well... :>)

Source record: 36316

I have all the major components to build the ultimate BIG power HF amp. If you are in to amp building, you'll appreciate the parts I have here. It took a long time to collect it all.

RF deck....
4CX-5000A tube. Used but guaranteed good.
Eimac socket for the 4CX-5000A.
Filament transformer for the tube: 7.5 volts at 75 amps CCS.
C1 in the pi tank circuit: 0-460pf @ 35kv
L1 in the pi tank: new roller inductor from the Collins 208U 10kw HF amplifier (7500V).
C2 in the pi tank: 7-1000pf @ 5kv.

Power supply;
Plate transformer: 5600 VAC CT, at 1.1 amps CCS (very heavy, could probably handle twice the current).
Choke: Heavy duty swinging choke, 2-6 hy, 16kv breakdown.
Diodes for bridge, 4, solid state, 6KV at 3 amps.
Filter capacitors, (qty 2) 100 mfd @ 4000 volts (put in series gives you 50 mfd @ 8kv).
750 volt screen supply already installed in cabinet.

If interested in entire collection, I'll sell it all for $1100 or trade for a transceiver or another amp. If you have something I want of more value, I have cash to even things up. Mike, (979) 693-1461 eves and weekends.

If the transmitter is matched to the load presented to it at the tx end of the coax, all of the power reflected by the mismatched antenna will be re-reflected back towards the antenna when it reaches the Tx. All of the Tx power will eventually either be radiated by the antenna or disipated by the feed line loss. If the feedline loss is fairly low to begin with (as in a typical HF installation) then very little total power will be lost in the feed line - the vast majority of it will eventually be radiated by the antenna.

If the transmitter output circuitry is not properly matched to the load presented to it by the tx end of the feed line then all of the power generated by the tx will not couple into the feedline (and thus not be shown as forward power on the meter). This may cause excessive disipation in the final tx stage and may be what some are contributing to "power being reflected back into the transmitter" and causing damage. Most modern solid state output circuits now have a fold-back circuit to reduce the generated power and protect the output stage when the load is not correct. The old tube circuits had tune and load controls to permit the operator to match the output to a variety of load impedances.

What you are missing is that all the output power is transferred to the
load but the maximum available output power is not transferred to the load.
The "output power" is defined as whatever power is being output under
any conditions. The "maximum available output power" is the power output
under matched conditions. There's a big difference.

The rule you quote about matching is true only under a particular set of conditions. Unfortunately, it's often quoted as being a universal Truth, which it's not.

IF you have a source with a fixed impedance, AND adjust nothing but the load impedance, then the maximum load power dissipation will occur when the load impedance is the complex conjugate of the source impedance. If the source and load are purely resistive, this means that the load impedance equals the source impedance.

So let's look at a particular case: A 141.4 volt RMS voltage source in series with a 50 ohm resistor, connected to a load resistor whose value we can vary. We'll find that, sure enough, the maximum dissipation occurs when the load resistor is 50 ohms. Its dissipation will be 100 watts. The voltage source has to produce 200 watts, since another 100 is dissipated in the source resistor. If we consider the efficiency as the ratio of the power in the load to the power produced by the voltage source, it's 50% when matched. Note, though, that although this is a good circuit for explaining what's happening, it's not necessarily a good model of a transmitter. Many transmitters exceed 50% efficiency when producing their maximum power, and may or may not be matched under this condition.

Now, between the source (that is, voltage source + source resistor) and the 50 ohm load let's connect a half wavelength of lossless 450 ohm transmission line. The line's SWR is 9:1. The forward power on the line is 278 watts, and the reverse power is 178 watts. What's the power dissipated by the load? It's 100 watts, just as before. And the voltage source is still producing 200 watts, and the source resistor is dissipating 100 watts. This is a simple voltage divider circuit you can completely analyze in a couple of minutes. The forward and reverse power on the line are of no consequence at all -- all that counts is the impedance *seen by the source*. In this case, it's 50 ohms. For that matter, we can make the transmission line impedance anything we'd like, and get any amount of reverse power we'd like, from zero (when the line impedance is 50 ohms) to anything. Yet the voltage source, source resistor, and load resistor dissipations will remain unchanged.

But suppose we change the load to 450 ohms, leaving the line impedance at 450 ohms. The power in the load is now only 36 watts, the line's reverse power is zero, and the source resistor dissipation is 4 watts, and the voltage source is producing 40 watts. Hmm. The efficiency is now 90%! So the condition for maximum power transfer isn't the same condition as for maximum efficiency. Anyway, next put a tuner at the

source end of the line to transform the 450 ohms looking into the line, to 50 ohms. The load (and source resistor) dissipation will increase to 100 watts. On the line, the forward power is 100 watts and the reverse power is zero. Now move the tuner to the output end of the line, leaving the adjustment the same. You'll find that the load power is still 100 watts, the source resistor power still 100 watts, and the voltage source is still producing 200 watts. But the line's forward power is now 278 watts and reverse power 178 watts. You see, the only thing that's important is the impedance *seen by the source*. Reverse power has nothing to do with source or load dissipation.

One last thing to think about. Instead of fixing the source impedance at 50 ohms and varying the load impedance, try fixing the load impedance and varying the source impedance while leaving the voltage of the voltage source unchanged. What value of source impedance will produce the maximum power in the load? Hint: It's not 50 ohms.

Could it be zero ohms? :-) That's what the power companies do - go
for maximum efficiency instead of maximum power transfer. Way back
when, someone proved that power companies would probably never
exist because they would burn themselves up trying to achieve
maximum power transfer.

If you fix the load resistance at 50 ohms and vary the source
resistance, zero ohms provides both the best efficiency (100%) and the
maximum power dissipation in the load.

If the load is complex, Rl + jXl, the maximum load power will occur with
a source impedance of 0 - jXl. Maximum efficiency (100%) will occur with
a source resistance of zero, with any reactance.

It is the notion of reflected power itself which causes the confusion. Best to erase it from the imagination and return to square one. All can be clarified without resorting to black magic. KISS. There's no point in trying to solve problems which didn't exist before reflected power entered the vocabulary.

Here's another trap to avoid. If the generator impedance is Zg = R+jX and load impedance XL is also R+jX, ie., generator impedance is equal to load impedance, then maximum available power is NOT transferred.

It is essential not to use Z when only R is meant. That bad habit, which almost everybody in ham radio suffers from, causes much confusion, is the hidden root of many arguments and has lost friends.

Hi,

I have a mint condition Icom 746 for sale. It is in the original box (also perfect condition!) with all included accessories, manual and schematics. The HM-36 microphone, spare fuses and keyer plug are still in the original plastic. Also included is the Icom FL-52A CW filter (HRO price $179.95) which is installed in the radio. Everything works perfectly, of course. I purchased this new last year, but never use it as I have other rigs. $1,000 double boxed and shipped conus.

Thanks & 73,

Josh AD6XI

|(cw use mostly.)

Not necessarily by brand, but I would suggest a set of "hi-fi" phones
that are full frequency response and comfortable to wear. (I have an
old set of Realistic Nova 40s that aren't bad. I've also used Koss.)

The "communications" types are crap. I once bought a brand "H"
headphone/mike combination and listened for five minutes, boxed it up
and returned it for credit.

Audio distortion will wear you out over long listening periods and
actually mask weak signals. When I work phone, I use a David Clark
headset/mike combo. The audio on CW is not nearly as crisp and since
they are noise-reducing aircraft equipment, they really clamp your
head. I would not recommend them for listening to CW.

[snip]

Well... ahem, not exactly. I know it's not applicable to the typical
amateur radio HF transmitter,
but...

For the resistive case, reducing the source resistance to zero only
maximizes the load dissipation
when the source resistance is limited to positive values. In fact, the
maximum power dissipation
in the 50 Ohm load will be infinite and would occur when the variable source
resistance is adjusted
to be -50 Ohms [negative 50 Ohms], and in practice, this is just before "the
melt-down".

That said, there are indeed examples of real practical systems where
negative values of source
resistance are used and in these cases such use further increases power
transfer.

6604. Radio Works Ordering Problems

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-09 23:04:38 UTC
From: Caveat <caveat@poster.com>
Message-ID: <k37avu8ublppkgolk6otr9vrqqlml8fndt@4ax.com>
Source record: 36314

If you want to buy antenna equipment and accessories, you might want to reconsider dealing with The Radio Works. My recent experiences with them indicate that they have a problem or two in running their business in anything that resembles a competent way.

A couple of weeks ago I placed a phone order with them for $132 and gave them my Visa check card number. they called me back the next day saying that the charge was declined. Since I had more than enough in that account to cover the charge, I called Visa. They reported that Radio Works had attempted to charge $1320 to my account.

So I called RW back and told them that they had made a mistake in the keypad charge entry, only to be informed that the charge had gone through! Then a while later they called me back to say that they had entered the wrong account number on the charge that had gone through, and that my order was still awaiting payment.

So I said that I was tired of their errors with the keypad, and would send them a check. I was assured, by "Brad" that the order under my name was ready to go on his desk as soon as they received my check, and that it wasn't necessary to relist all the items ordered. So I mailed them a check.

Today, I received my check back from them with a note saying that I should resubmit the check with a list of the items I wanted.
Back to square one.

I give up. It is just too painful to try to do business with some people... (YMMV)

Customers seem to be A Real Inconvenience for far too many businesses.

Sign spotted at a business recently:

" New, convenient customer hours: "
" 1 P.M. to 3 P.M. "

Now I many not be the sharpest crayon in the box, but I
think I know just exactly who this is " *convenient* " for!!

sigh...

i agree
customer service has died
i have attempted to order pizza from pizza hut 4 times in the past month
and each time they either messed up the order or took an hour to hour
and half to deliver the order and keep in mind i live less than 2 miles
from the pizza joint
when i called down there all i get are excueses and so on
so needless to say i now deal with anyone other than pizza hut

Between catalogs, fundraising appeals, greeting cards, and people
getting mail order packages, the Postal Service and all the delivery
services are working all out right now.

Also, after the premium services, first class mail gets top priority
throughout the system. Magazines go via second or third class (don't
remember which).

Also, anyone sending out a mass mailing to 100,000 people or whatever
probably staggers the printing and mailing over a few days.

Happy trails,

There is apparently one benefit to living in Korea. It may have some problems, but they are still very customer oriented.. When you order food delivery here, it's very prompt. They deliver food in real dishes direct to your door, piping hot, and when you have had time to eat the meal, someone comes back and collects the dishes. I always do them the courtesy of washing the dishes for them, but they do not expect this. Nor do they expect a tip. (I give them one anyway). Even in restaurants here, tips are not expected, and, in some cases, actually frowned upon. People here still feel that service is a noble calling.

The same goes for other types of businesses. Furniture, televisions, etc. are delivered to your home and set up for you. If what you bought requires assembly, they assemble it for you. Repair persons do not charge extra to come to your home to repair your TV/washer/stove/what-have-you. They charge you only for the actual time and parts used in the repairs. Maybe if customer service were still this way in the US, folks wouldn't be going outside the country to buy things.

Just my -W-246 for the day.

6611. FS: AEA PK-900 Multi-mode TNC

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-10 02:59:09 UTC
From: WA5VHU <wa5vhu@attbi.com>
Message-ID: <1McJ9.184242$GR5.59352@rwcrnsc51.ops.asp.att.net>
Source record: 36322

This dual port multi-mode TNC is capable of many modes of operation plus it can be upgraded by hardware from Timewave plus software for even better performance and new modes. This unit is in good cosmetic and functional condition, as can be seen in the pictures at http://www.qsl.net/k5vx/ . It is a single owner unit that has been hardly used, very well cared for, kept in a non-smoking environment and has never needed any repair. Includes the manual and cables. Asking $180.00 which includes ground shipping CONUS. Contact Jonathan at k5vx_AT_arrl.net or 972 685 5169. Thanks & 73!

6612. FS: JPS NIR-10 DSP Unit

Date: 2002-12-10 03:00:19 UTC
From: WA5VHU <wa5vhu@attbi.com>
Message-ID: <7NcJ9.306963$P31.117490@rwcrnsc53>
Source record: 36325

FS: SCS Pactor II Controller

This is the famous SCS Pactor II Controller that supports 1200/2400 baud AFSK, 9600 baud FSK, HF modes such as Pactor 1 & 2, Amtor, CW, RTTY, SSTV, various forms of FAX, plus PSK31, and this unit is the most sought-after box for Winlink! This package includes the hard to find SCS Remote Control Unit. The controller and remote control units are single owner units that have been very well cared for and are in mint condition electrically and cosmetically. Hardly used, they have been kept in a non-smoking environment. They work great and have never needed any repair. See the pictures, which can be viewed at http://www.qsl.net/k5vx/ . Includes a soft copy of the very thorough manual, plus cables and software. Asking $600 which includes ground shipping (CONUS). Contact Jonathan at k5vx_AT_arrl.net or 972 685 5169. Thanks & 73!

6615. FS: Yaesu FT-990 HF Transceiver

Newsgroup: rec.radio.amateur.equipment

OK, I am not a newbie to amateur radio. Been working the radio for about 10 years but havn't did a lot of research into it. Just did what my dad did. Lately I have been seeing a lot of references to boat anchors. What is this relation to ham radio and boat anchors.

I am just curious.

hee hee hee heeee

Boat anchors only refers to old, useless, worthless equipment, that is said it be useful only as a boat anchor!!

For example-- old, old, military surplus gear, weighing 150 lbs.... no market value, good only for a boat anchor.

Get it ??

From: Robert Fanfant <fanfant1@attbi.com>
Message-ID: <UKfJ9.186074$GR5.61983@rwcrnsc51.ops.asp.att.net>
Source record: 36331

I've have 3 HF rigs that I'd like to use more often but I just hate having to unplug every connection to make that happen. So I just end up using 1 rig most of the time.

Looking for input from others running multiple rigs.

What hardware recommendations do you use that lets you quickly switch among the different rigs? I'd like to share the rigs (2 ICOM & 1 K2)with the following devices: amp(needs ALC/RELAY), external speaker, Timewave 599 DSP, CW paddle, ICOM microphone, computer for logging, coax antenna.

Thoughts?

-rob

Hell, I was IN a Pizza Hut one evening... A couple of my friends and I decided to have a chat there and catch a meal. It took 3 minutes to seat us, over 45 to deliver our meal after ordered. It doesn't take that long to make a damned pizza. And they weren't that busy. Yes we could have left.. But we were hungry and we kept figuring a couple more minutes it will be done. Not to mention time does pass when BSing. Needless to say we never went back. As of about 2 months ago or so, they closed that one up for business. I can only wonder why.... OH WELL! Ya snooze, ya lose. Tech@DP.NET

Meter, metre... WTF? How are we bloody foreigners supposed to understand anything anymore? ;-))

About the rigs: I've used the IC746 on six and two meters, and it's a pretty good rig - of course not as good as a single-band two or six m rig. It's especially deaf on two, but manages okay on six plus it has one hundred watts output, so we can save some money not having to buy a linear.

Beast regards, Kari, oh8mfh at kp34ug

6623. FS: CD-ROM: 240+ Military Radio Manuals for $5.00

Newsgroup: rec.radio.amateur.equipment

I have a pile of CD-ROMs on military radio gear, mostly modern equipment from the 1970s and newer. Over 240 manuals on this disk (I think its 241 to be exact). All files are scanned into Adobe .pdf format, and comes with a viewer on the disk. These CD-ROMS are great for the radio enthusiast, or for users of military radio equipment. I can sell the disks for $5.00 plus $2.50 shipping anywhere in USA. International shipments are more. I can Email you a listing of the manuals and the models covered by Emailing me at mdavids@erols.com. Thanks for your time!

Mike

RE: Post below

A very good directional coupler, correctly adjusted, can have upwards of 60dB directivity. If it is designed to correctly sample both the electric and magnetic fields in the transmission line on which it is mounted, its output sample will not change with the location of the coupler along the line, for a given forward power in the line.

Using such a coupler on a transmission line conducting X watts of power into a perfectly matched load Z will show a 60dB difference in output voltage when looking at the forward and reflected energy (by rotating the coupler 180 degrees and refitting it to the line).

Now remove the termination from the line. The coupler shows the same level of forward signal as it did before, but the reflected sample is equal to it. I have confirmed this for myself while doing RF pulse measurements of TV broadcast antennas.

Now, if reflected power is imaginary -- how is this reality explained?

Boatanchor is a jargon term for old Radio equipment. In the old days (before solid state) vacuum tubes required very heavy transformers and parts with metal chassis and cabinets -- so some weighed in at 100 pounds plus. Especially the Military Surplus gear that Hams converted to Amateur Radio work. But commercial gear of the day manufactured for Hams was also very heavy and bulky.

The origin of the term boatanchor has been lost in the mists of history -- but here are a coupla guesses.

ORIGINS OF BOATANCHOR

THREE VERSIONS -- Opinions From The Internet.

Version I -- During World War II, Military Radio Techs used the term BoatAnchor as they
struggled with the huge, heavy, electronic equipments of the day -- full of transformers, tubes etc.
Also the US Navy frequently marked electronic gear with an anchor. After the war -- tons of
the equipment appeared on the surplus market and was dubbed BoatAnchors due to the reasons
above - one or both.

Version II -- After WWII a national magazine editor answered a query "As what to do with an
outdated heavy, large, surplus electronic instrument?" and answered "Tie a line to it and use it
as a BoatAnchor"

Version III To all those who expressed interest in the CQ magazine reference to boatanchors,
I found it after only an hour or two of skimming. And I also found that some of my recollections
were a bit hazy after all those years.

The original letter to the editor (not to the "Surplus Editor" as I incorrectly recalled) appeared on
page 16 of the October 1956 issue of CQ and was as follows:

Gentlemen:

I recently acquired a "Signal Corps Wireless Set. No. 19 MK II Transceiver." Are there
schematics or conversion data for this rig? Any info will be appreciated.

David J. Wilke W3LSG Pottstown, Pennsylvania

The editor replied:

The only conversion we seem to have on the files here at CQ calls for 100 feet of 1" Manila line,
one end of which is to be tied securely around the MK II Transceiver. This then converts the unit
into a fine anchor for a small boat. If any readers have better conversions we will be glad to
hearabout them.

Ed.

This letter apparently generated a lot of interest and in the February 1957 issue of CQ there
was a follow-up from CQ's editor, another letter from W3LSG and several pictures. If I find
the time I will scan them and post links to them here.

The expression "boatanchor" may have originated earlier than 1956, as Doug Hensley pointed
out. I found no earlier references in amateur radio than these CQ's, but there may be some.
However, there was no reason to call amateur gear of that era "boatanchors" since almost
all of it fit thatdescription. It wasn't till later when smaller, lighter gear became popular that there
was reason to categorize some gear as boatanchors. And it is also interesting to me that a word
originally used to denote something of little value, useful only to anchor a small boat, has taken
on a more affectionate meaning. We love our "boatanchors".

News Flash!!!!! At least on our local news, they recently reported of a
store contemplating doing just that!!!!!! My question is, is how many will
"forget" to scan or ring up a few items. Somehow, this is going to be a bad
idea from the get go unless they can tag "everything" with a code to set off
an alarm that would be disabled by the scanner or register thereby having to
be scanned or registered. Tech@DP.NET

Boatanchors. The best description of a boatanchor is: Older radios,
transmitters, receivers and related equipment, that uses tubes, weigh
more than you want them to, usually from 80 to400 pounds. Thus the
nickname boatanchors. If you want to see how much boatanchors are
worth on the market today there are 2 good places to visit.
1, rec.radios.amateur.boatanchors
2, As much as I hate it, E-bay. When going to e-bay use Johnson, B&W,
Heathkit, Hallicrafters, Globe or Collins as search words.

Far from being useless and worthless, boatanchor equipment shows the
history of amateur radio. Anyone that claims they are worth nothing
or next to nothing is either ill informed or trying to cheat you out
of what may be very valuable equipment! Boat anchor prices, as you
will see if you check, range from $50.00 to well over $5,000.00
depending on the manufacturer and condition.

There is much to be said for sitting in front of equipment you could
not afford as a kid and watching the tubes glow and hearing the relays
clack upon keyup. Yes, it can be called nostalgia. They are fun to
restore and operate, although I don't think anyone likes to carry them
around as the shack on a belt crowd does with their equipment.

If you are really interested in finding out about boatanchors check out the 2 source and ask questions. If you are fairly close to one of us boatanchor owners you may get invited over to view and maybe operate some of the old equipment :<}

About 20 years ago, when living in Memphis, TN. I was with friends at a Shoney's (like a Big Boy) restaurant. It took so long, one of the party went to the phone, ordered a pizza. The pizza was delivered to the restaurant and eaten by us. The manager came over and asked what was going on. He was told that we had waited for an hour to even be waited on, and we were hungry.

Some local supermarkets have offered selfserve checkouts for a couple
of years now. Besides having a staff person in the area of these
checkouts, you also have to place each item on the conveyor belt after
scanning, which verifies the weight. I would guess they have a hidden
video setup as well.

Home Depot recently introduced the self serve espress checkouts.
Certain items, and more than a certain quantity of items, still need
to go through the regular checkouts. They sometimes spot check your
receipt against what you have in the cart on the way out.

It is possible to slip something by this system, but just as easy to
get caught as "low tech" shoplifting.

Happy trails,

Going back to the pizza example from an other post, we just
got a new pizza joint in town. I called up there the other night
and ask what their specials were. They told me and ask if I knew
how they operated their business. When I told them no, they said
what they do is assemble the pizza for you and you come and pick
it up and take it home and cook it yourself. If you want them to
cook it that's an extra $2 per pizza. I told them ok and I'd find out
what everyone wanted and call them back, yaknow I never did
find out what my family wanted on their pizzas.

And I don't think I ever will either!

That would have been more difficult than it sounds because I could not now replicate what the order eventually ended up being. And even if I did have such a list, I sure as hell wouldn't now send it to them now because of the high likelihood of continuing screw-ups.

Bear in mind that this was a telephone order for lots of little parts. The original conversation with the order taker included:

"Gee, we're out of those; how about this instead?"

"OK"

"What do you have that will do this other function?"

"I suggest 6 of these items..."

"OK"

(etc.)

I didn't write all this stuff down as the order was being taken because I had a phone in one hand and a QST ad in the other. I sorta figured that they had the order and would handle it competently.

Silly me...

6650. FT 920 For Trade and More

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-10 22:51:37 UTC
From: Oris <orisnospam@dirtball.com>
Message-ID: <3DF66EA7.2040807@dirtball.com>
Source record: 36161

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100
watts HF + 6 Meters. It has a Auto tuner and the MC 100 Desk Mic. I
also Have the 3 KW Roller Inductor Antenna Tuner. They are in good shape
I will trade both for a FT 990 or a FT 1000.. I have been using the FT 920 as a backup rig.
If you have a FT 1000D I will add a Henry Radio 2KD-5 Amplifier to
the deal. 100 watts in gets you about 1000 watts out. I will trade this 2KD 5 Henry amp for a FT 990 or a FT 1000. It has new caps
and a pair of Emac 3-500. It is wired for Single Phase 240. The same
voltage that runs your dryer and electric range.
I also have a Icom AT 500 auto tuner. This tuner will handle 500 watts. It works fine and I have no use for ICOM equipment. My station is all Yaesu at this time. I will trade this tuner for a Kenwood TS 50, or other small HF Gen. coverage rig, or a good Short wave receiver. I also have a Pentium III 500 Mhz computer for trade. It has 128Mb ram, CD burner 52X CD rom S3 Virge video card, 1Gb hard drive, 10/100 Mb network card, Motorola SM 56 modem, Yamaha sound card in a ATX tower. Of corse keyboard and mouse included. I will trade this computer for 350 bucs plus shiping or a good HF moblie rig.
I am will to travel 100 miles from Athens GA. Drop me a email so we can work out the deal.
oris@dirtball.com
Happy Holidays
73 and thanks for reading

6652. Ham Tower....where is the best place to find a buyer for an item like this?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-10 23:30:42 UTC
From: joevintage@metacrawler.com
Message-ID: <b13f3728.0212101530.2f9ee96a@posting.google.com>
Source record: 36163

The reason I am posting this thread is because I have a tower I was considering selling and I thought you all may be experts in the field.

A brief description of it would be a 70' tubular, tilt teloscopic and ROTATABLE unit ! It rotates in it's base on brass bearings, and has a guy ring assembly that would allow it to be guyed and still rotate at the guy ring !! Not that you would ever need to guy it, because it is literally orders of magnitude stronger than any tower of its type...mil spec and engineered to take a blast. A true "emergency ready" unit since it can be raised, lowered and rotated without power BY HAND if need be !

The rotate feature can be bypassed and the unit locked in place at it's base with the turn of a socket as can the guy ring be fixed solid if need be.

It has a BRADEN 25,000 pound winch (may be a 50,000 lb.) on a worm drive assembly powered by a GE electric motor for raising and lowering. Industrial motor reverse electric bus box and all related components are available. It has 2 bases if you should ever need to move it, and hundreds of other features that are just mind boggling including aircraft countersunk capscrew fasteners in its construction.

The cost to duplicate this thing would be huge....raw materials alone would exceed $10,000 bucks.

I was wondering if you may know of a way to market this thing, or know of someone who may be interested in it themselves.

I am in St. Louis....I also have a Mosely tri bander I would consider letting go too. I do need a fair amount for the thing due to the sheer nature of the item, and the fact that there will never be another like it available unless it is custom built.

Thanks in advance for the replies and for your time folks, and let me hear something !!

6656. SWR Bridge component values-Henry 2K4

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-11 03:02:21 UTC
From: Crazy George <munschNO@attglobal.net.SPAM>
Message-ID: <3df6b0dc_2@news1.prserv.net>
Source record: 36167
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,sci.electronics.repair

The used 2K4 I bought suffered some kind of disaster inside the little aluminum box containing the bridge. Someone probably tried to put a kilowatt into an open circuit. The inside of the box is blackened, and spotted with fine particles of molten metal. As a repair, some previous owner simply removed most of what was in there, leaving the toroid around the center conductor, and the two .01 caps on the RCA jacks. I have a corrected copy of the schematic, and would like to obtain a few pieces of additional data before I tackle rebuilding it.

The drawing (SWR Bridge, December 1970, By: WCK) shows a unterminated winding (L80) grounded on one end, and apparently wrapped around the center conductor. There was a short piece of magnet wire still stuck inside the insulator in the center of the toroid, and I suspect this must have been a simple Faraday shield. How many turns, and what spacing was it? And, how many turns in the main coupling winding around the toroid (L81)? I count 64 remaining on this one, which may be close to the original number.

Second, some component values. The trimmers (C80 & 87) connected to the center conductor were probably in the range of 7 pf. Is that correct?

Are the RF chokes (incorrectly shown as C82 & 84) 0.5 or 1 mH, or something else?

The SWR bridge shown in many ARRL Antenna Handbooks looks very similar to what is shown on the Henry schematic, so I am using it for some guidance. Has anyone else compared the two?

All constructive comments appreciated, and yes, Reg, I know measuring SWR doesn't tell you much. I just want it for a relative output indicator.

One can set their newsreader to ignore all that FA stuff
(if I want to know what is available on eBay, I GO THERE).

But when some folks ignore the simple and polite way
of posting links to their auctions here, I find it a bit
annoying, and will in fact make a point of never bidding
on anything they list on eBay.

Hmm, you can't filter on the keyword EBay, E-Bay, ebay, etc etc??? Have not met the net god that determined that only a standard phrase can be used to indicate an auction. Or do I get to pick one??? OK from now on, all you auction types put *t$&$%s in your header so I can filter you :-)

If that were the standard way of indicating something for auction,
then I would filter on it. The standard way is to use FS: or FA:.

If you were unaware of that standard, your ignorance has now been corrected :-)
Say "Thank you".

I have for sale a Radio Shack DX-398 Shortwave Receiver with original box, carry case, and manual. This radio is in mint condition and has only been turned on about four times. I thought I would have use for it but have not. This receiver has full shortwave coverage and includes separate upper and lower sidebands, as well as FM Stereo (through headphones not included).
Asking $120.00 shipped USPS Priority Mail U.S. only on receipt of U.S. POSTAL MONEY ORDER ONLY! Paypal is also accepted, please add $5 if using credit card for total of $125.00 to cover my PayPal credit card charge.

Thanks for reading. Please reply via e-mail if interested.

Quick and simple is the 'SLIM JIM'. It is made from 300 Ohm feeder. I have build several for portable operation over the years.

The design appeared in a publication called 'Out of thin air'.

The total cost was about GBP2 - that was for the plastic tube to house the aerial in.

And don't forget.... the VSWR will change depending on where you are in the band. Make a measurement just inside one end of the band then somewhere in the middle then near the other and and look at the results.

OK, let me see if I understand now...

Using the I Smac hypothetical:

Initially, the 100 watt transmitter attempts to deliver it's full output to the load, since it has no clue that the load is not matched to the source. When the energy hits the mismatch, a portion of it, 10 watts, is reflected back to the source, 180 degrees out of phase. This signal, being out of phase with the source, opposes 10 watts worth of source energy from subsequent waves, so the source only puts out 90 watts once the reflected waves reach it. Further, once the reflected wave reaches the source, it is re-reflected back toward the load after undergoing another phase inversion, so, the wattmeter will now read 100 watts forward, since the re-reflected signal is now 360 degrees out of phase... Meanwhile, the source is only supplying 90 watts and the load is dissipating 90 watts, so 10 watts is "standing" in the line... If I'm correct, that would be the "standing wave".....?

Be very careful there. Energy is a scalar and doesn't have phase.
Energy is a scalar as is water. What's the phase of water flow?

The voltage and current from the source are in phase. The reflected
voltage and current are 180 degrees out of phase. If the voltages
add, the currents subtract and vice versa.

Be even more careful. Power is a function of time. In a steady-state sinusoidal system, its waveshape is that of a sine wave plus a DC term, with the sine wave frequency being twice the frequency of the voltage or current. Energy is the time integral of this quantity, so it's also a function of time. The energy waveform will be another sine wave of the same frequency as the power waveform but shifted 90 degrees, superimposed on a ramp.

The DC value of the power waveform is the average power. If the voltage and current are in phase, the entire power waveform is greater than zero, indicating that power is flowing only in one direction for the entire cycle, although its magnitude is going up and down sinusoidally, two cycles for every voltage or current cycle. If the voltage and current are 90 degrees out of phase, the power waveform will be centered around zero watts, meaning that power is flowing in one direction for half the time, and back the other way for the other half, resulting in no net power flow. The average in that case is zero, and the slope of the energy waveform ramp will be zero. That is, energy will flow back and forth in equal amounts each half cycle just like the power, but 90 degrees out of phase with it.

This is high school trigonometry, not rocket science, from a simple multiplication of v(t) times i(t), where both are sinusoids of the same frequency. (The integration for the energy waveform does require high school or freshman college calculus, or a little time spent with some graph paper.)

But this doen't make power and energy phasors, because phasors assume a particular frequency (that of the voltage and current), and the sinusoids involved with power and energy aren't at that frequency. But you could, if you had any reason to do so (and I can't think of one right off the bat), describe power completely as a DC term plus a sine wave of a particular amplitude and phase. But these waveforms are neither scalar nor phasor quantities as those terms are used in AC phasor analysis, and can't be mixed in with scalar and phasor quantities for analysis. (Unless, of course, you need to "prove" something that isn't so, in which case it's often useful -- essential, even -- to mix incompatible quantities and perform invalid operations.)

People often mean "average power" when they say "power", and you sometimes even see power "defined" as V*I*cos(theta), where theta is the phase angle between V and I. It's not. That's the *average* power. Power is v(t) times i(t), period. Average power is the DC term you get from the multiplication(*), and it's a constant in a steady state system. But

when you start talking about energy sloshing around in a transmission line, you have to deal with how energy and power vary with time. And you can bet your family joules that they do.

Roy Lewallen, W7EL

(*) The definition of average for any repetitive waveform is 1/T * Integral from t to t+T of W(t) dt, where W(t) is the waveform and T is the period. For power, W(t) = v(t)*i(t). This holds for any repetitive waveform of any shape. But for sinusoids, when you multiply v(t) and i(t) you get two terms, one a constant (DC) and the other a sine wave (of twice the V and I frequency). The average value of a zero-centered sine wave is zero, leaving the DC term as the average value by inspection. You'll get exactly the same result if you calculate it from the definition of average.

Kenwood TS570SD/G HF/6M transceiver w/2.4KHz SSB filter, 400HZ International CW filter, PS31 Matching Speaker, PS 40 Switching Power Supply for sale. (90M serial #)
Modified by the Kenwood factory for Six Meter operation in July 1998 at a cost of $130.00.
Radio comes with all manuals, hand mike, power cord.
This radio has low hours and is in excellent shape. Never mobile or field operated.

Radio will be shipped in the original Kenwood box. Power supply and speaker shipped individually. (Double boxed for maximum protection)

Asking $800.00 for the complete package. Buyer pays packing, shipping, and insurance costs.

Rich, W6VX in Sherman Oaks CA (Los Angeles area)

w6vx@arrl.net

Hi Steve,

Odd this simple fact was overlooked by all - even with all the "take care" being taken.

The reflection at the plane of discontinuity enforces a phase shift, BUT that phase shift is not what appears at the source because the transmission line then imposes its own phase transform equal to the number of degrees long (electrical length) that the line is from the plane of reflection back to the plane of measurement (the source).

This has been a point our other Steve (VE9SRB) has been repeating to no end in terms of adding currents and voltages, not power. Powers add only at the most specific of conditions (yours is not one of those occasions).

> Further, once the
>reflected wave reaches the source, it is re-reflected back toward the
>load after undergoing another phase inversion
This is sheer speculation (that the source is not matched) and again ignores the line's contribution of reflected power back to the source, now a complex load (if not matched to the line). Even IF the source is mismatched, I dare say few here are competent to determine its actual value (although I've seen considerable speculation to force fit the arguments presented in too many threads through the years).

When both ends are mismatched (your and other's assumption) and the line length is not known, there is no way to accurately measure how much power is being developed in the system. This is known to Metrologists as Mismatch Uncertainty and equals ï¿½25% of the actual power for the simple expectation you portray (which, of course, is easily twice the power you think is in the reflected component).

Thought experiments of an unmatched source supporting complex power scenarios through unspecified transmission line lengths to another, remote mismatch are dead on arrival.

We don't have to worry about that in transmission lines. Forward power
has the voltage and current in phase and reflected power has the voltage
and current 180 degrees out of phase so V*I = power (no vars) because
cos(angle) is always +1 or -1 depending upon whether it is forward or
reflected power. Forward waves and reflected waves are transparent to
each other and pass unmolested until they both encounter an impedance
discontinuity where their wave components can cause interference.

My point exactly, Roy. Do you agree that a forward wave of 61.24V at 1.225A has an associated average power of V*I=75 joules/sec? Do you agree that a forward wave of 20.41V at 0.408A has an associated average power of V*I=8.33 joules/sec? Do you agree with Steve that these two (and only two) waves can be added to get 81.65V at 1.63A with an associated power of V*I=133.33 joules/sec? Do you agree that 75 joules/sec + 8.33 joules/sec = 133.33 joules/sec?

Steve says the average power contained in a wave in a transmission line is V*I = V^2/Z0 = I^2*Z0. I am basing my discussion of power on his equation. It is obviously average power.

No, when V and I are in phase, the power is V * I * (1 + sin(omega *
t)). The *average* power is V * I. (where V and I are RMS values)

Sure.

Do you agree with Steve that these two (and only two) waves
> can be added to get 81.65V at 1.63A with an associated power of V*I=133.33
> joules/sec? Do you agree that 75 joules/sec + 8.33 joules/sec = 133.33
> joules/sec?

Maybe. Depends. If I have two one volt voltage sources and a one ohm
resistor all in series, I can turn on one source and get 1 volt at 1 amp
for one watt in the resistor. I can turn that source off and turn the
other source on and get one watt in the resistor. Then I can turn both
on and get two volts and two amps for 4 watts in the resistor. So I've
added two "one watt" sources to get 4 watts. Pretty cool, huh?

Fortunately, your sources are capable of variable power outputs. Unfortunately,
a wave in a transmission line with a fixed voltage, a fixed current, and
a fixed ratio (V/I=Z0) doesn't have the luxury of varying its associated power.
V*I is all the power there is. There ain't no more (and no less). Conservation
of energy rules. A battery adjusts its current to its load. An EM wave in a
transmission line cannot do that. The energy, along with Z0, dictates the
magnitude of the voltage and current. The energy cannot increase without
another energy source. A 75W wave cannot add to an 8.33W wave to get a
133.33W wave. An additional wave, in this case in the form of constructive
interference, must exist to supply the additional 50W. It's all explained
on my web page at: http://www.qsl.net/w5dxp/waves2.htm
I can see how someone who hasn't read Dr. Best's article would be at a
disadvantage in understanding the subject matter.

Steve's two and only two waves are constant power, constant voltage, and
constant current (all averages). He says that's all there is, two and only
two waves. His two and only two powers add up to more power than is available
in those two and only two waves.

Hi Cecil,

By forward waves and reflected waves, I presume you mean two
independent waves from independent sources.

This is certainly the tenor of past discussion.

By transparent I presume you mean to express that the two waves
are insensible to each other as are the two independent sources.

No one would expect anything other in a linear medium.

By impedance discontinuity, I presume you to mean a change in the
V/I as a function of medium change.

For waves in a transmission line, splicing a 75 Ohm cable to a 50 Ohm
cable should do the trick. For waves in the ï¿½ther, penetrating into
soil, water, trees, what-have-you is all around us.

By interference, I presume you to mean to express that the two
waves are capable of mixing and producing new frequency products.

No way. Or:

By interference, I presume you to mean to express that the two
waves are sensible to each other and no longer independent.

Just what this interpretation actually means escapes me (if I allow
myself to neglect all the other extraneous business you find necessary
to create the interference).

If I see the projection of the sun through a double slit against a
screen, I will see light and dark bars due to "interference." There
is absolutely nothing here that requires an impedance discontinuity.
There is no causal effect enforced on either of the two slits, one on
the other (they remain independent sources). The two waves are wholly
independent of each other before they fall on the screen, and after
they reflect (there is no magic zero time at the screen to change
anything going on here).

So, just what kind of "interference" were you thinking of?

Hi Cecil,

Odd how you can fault Roy for his sources' variability and then deny
them their variability through a transmission line. What you describe
(the inability) is simply a function of time before the Steady State
is settled in (shorten your transmission lines if the time haunts
you). You could have as easily said the batteries were incapable for
their first few microseconds too.

Nope, they are from the one and only source in the system and are coherent.

Being "sensible" to each other is what allows destructive interference
between components of two different coherent waves traveling in the same
direction.

The basic question is: What happens to the energy in two waves that
engage in destructive interference such that the total voltage goes
to zero and the total current goes to zero? In the example presented,
the energy traveling toward the source obviously goes to zero along
with the voltage and current. But since energy cannot be destroyed,
where does that energy go?

> If I see the projection of the sun through a double slit against a
> screen, I will see light and dark bars due to "interference." There
> is absolutely nothing here that requires an impedance discontinuity.

There are certainly other kinds of interference rather than two out-of-
phase waves traveling in the same direction in a transmision line. What
is your point?

> There is no causal effect enforced on either of the two slits, one on
> the other (they remain independent sources). The two waves are wholly
> independent of each other before they fall on the screen, and after

This is obviously not the kind of interference being discussed here.
The kind of interference being discussed here results in the loss
of identity of the two superposed waves thus creating a new wave. We

are talking in particular about destructive interference of two coherent reflected waves traveling in the same direction, the same thing that happens with non-glare picture glass.

> So, just what kind of "interference" were you thinking of?

The interference established by two coherent waves traveling in the same direction in a transmission line. Please reference: http://www.qsl.net/w5dxp/light.gif

In Dr. Best's analysis, his two sources are coherent waves, not transmitters
and not batteries. Dr. Best's asserts that the power in his source waves is
fixed at V^2/Z0 = I^2*Z0 = V*I? Do you agree with Dr. Best?

I used carry out for two pizza from the local hut, always check inside but since
I was there to order and thought it was ok did not look inside the box.

anyway, get home and no toppings on pizza ! call manager and young lady there
tells me that sometimes the toppings fall off the pizza during transit to the customer
house.

I told her that was strange, no toppings were in the pizza box !

Told her that as a penalty for poor service I would use her competitors for the
next year for all my pizza orders. She was shocked and had nothing else to say.

Please check with your bank, most of the time these Check cards do not
give
the consumer the same protection as a credit card.

Case in point, it can take days to get a debit reversed and the funds put
back into
the check account or as in your case, the wrong amount was keyed in and
could have resulted in your account going overdrawn or bills not getting
paid on time.
many have overdraft protection and this would cover you but you may not
know the wrong amount was taken from the check account until days later.

That is probably their wise ass reaction to a belief that customers
are trying to scam them out of free toppings. Kind of an adversarial
way to deal with your customers (the customer is always WRONG or a
crook). You could pursue this with the actual store manager (you
probably spoke with an assistant) or a regional manager. No excuse for
that type of treatment.

Oddly enough, when you paid them, all of the money got from your hand
to the register.

Happy trails,
Gary (net.yogi.bear)

Hi Cecil,

I don't see how that answers your choice to limit Roy's sources in
transmission lines. That is two for two where you simply ignore the
question and steamroller your agenda. No dialog in that.

Yes, I'm aware of that, but others here may not be. Good point to make. Normally I use either my Amex or Discover credit cards (almost always with the single-use CC number option), but Radio Works doesn't accept those two cards.

I had a special check/debit card account set up at the credit union last year to handle these odd situations, and I control the amount of money in that account (normally no more than $25) so that ISPs and the like can't overcharge the account. Simple electronic transfers from home between my savings and checking accounts make this possible.

Plus, the credit union has agreed to waive overdrawn charges in cases where someone improperly tries to do overcharge. In this case the huge charge attempt was simply declined by Visa. Without that precaution, Radio Works would now have a lot of my money...

If that's a problem, let me correct it. Please reference

http://www.qsl.net/w5dxp/fig2.gif

The transmitter source is somewhere out to the left, out of the
picture. The load is somewhere out to the right, out of the
picture. The energy inputs into the illustrated system are the
Pfwd1 and Pref2 coherent waves. The energy output from the system
is the Pfwd2 wave. This is what has been being discussed. So to
alleviate any confusion, I will differentiate between the "transmitter
source" and the "source wave(s)" from now on. I thought it was self-
evident up until now.

> You certainly missed the curve on that one. As I said, I would only
> consider it if I were to ignore all the other business that is wholly

Please consider anything you want but please use Occam's Razor to
distill this discussion down to something managable. That is what
I am trying to do. Introduction of an infinite number of irrelevant
concepts is a well known diversionary tactic. Why on earth would
you not "ignore all the other business that is wholly unnecessary"?
What does the price of eggs in China have to do with this discussion?

> Certain kinds? Do I have to ask you what kinds? It is all too tiring
> to have to engage in 6 or 7 rounds to complete one simple answer.
> Again you had a choice to talk around it or simply name ONE.

I did name one, Richard. The particular kind of interference that I
am talking about is the interference between two coherent waves traveling
in the same direction in a transmission line. Any other kind of interference
is irrelevant to the discussion and I hope you agree we should avoid
irrelevant diversions.

> Interference of two waves are not being discussed? Well, then there
> is no point in further discussion.

Hmmmmm, exactly what Dr. Best says as we get closer to a truth that he
doesn't care for.

Why must you introduce reams of irrelevant material. Are you interested
in getting to the truth or interested in diversions? Would you please
answer the question that Steve has refused to answer?

In a transmission line containing a match point and reflections,
the reflected energy:
1. Flows into the transmitter
2. Stands still
3. Disappears from the system
4. Flows toward the load
5. Other, please explain _____

This discussion is limited to "source waves", Richard. Any deviation
from that topic is just another logical diversion. One wonders why
logical diversions are needed.

If you have forgotten, the topic is how Dr. Best takes two and only two
source waves and combines them to obtain more than the sum of the energy
in those two waves. Batteries and transmitter sources are irrelevant to
the discussion.

> That is two for two where you simply ignore the
> question and steamroller your agenda. No dialog in that.

The topic is NOT batteries or transmitter sources. The topic is source
waves. You seem afraid to discuss this topic. One wonders why.

Hi Cecil,

That was explicit in my statement. You fail Occam's Razor with an
answer such as:
>> Certain kinds? Do I have to ask you what kinds? It is all too tiring
>> to have to engage in 6 or 7 rounds to complete one simple answer.
>> Again you had a choice to talk around it or simply name ONE.
>
>I did name one, Richard. The particular kind of interference that I

Particular kind? Substitution of your Particular for my Certain is
meaningless. You do nothing more than repeat an assertion and
introduce yet more argument (called steamrollering). Your rambling
requires me to buy into the incredible complexity and inspecifics you
have built into this. Like I said, I have no interest in pursuing
this 6 or 7 rounds. You have not distinguished between your
"Particular kind" of interference and these supposed others. Failing
that, there is no point in addressing even more complexity.

Tell us the history of the word "metre. Is it either French, or British (affectatious)? Lot of affectation in the Brit language. How do you pronounce Cirencester and Worcestershire? Could be misleading to people who don't speak British. In Texas they speak Texan and American. Never heard british or English when I was there.

From: Qarf <234@234.234>
Message-ID: <dd7K9.844$io.38887@iad-read.news.verio.net>
Source record: 36133

I'm considering getting a couple of FRS units (cheaper than another cell phone) to facilitate transportation/communications issues with my daughter. My wife & I are both hams, but my daughter isn't (and even if she were, two of the cheapo FRS units are cheaper than a 2m HT).

Are any of the FRS units any good? Any brands/models to stay away from? CostCo has two different pairs of Motorolas, cheap ones for $40, and not-as-cheap ones for $100.

The 500mw units claim to have a range of 2 miles, while the stronger units claim a range of 5 miles. Obviously, a lot depends upon terrain, buildings & QRM, but does anybody here have any experience with these things? If I were parked in front of a large high school, for example, and my daughter were inside, would a pair of the 500mw units be up to the challenge?

TIA for any info...

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100
watts HF + 6 Meters. It has a Auto tuner and the MC 100 Desk Mic. I
also Have the 3 KW Roller Inductor Antenna Tuner. They are in good shape
I will trade both for a FT 990 or a FT 1000.. I have been using the FT 920 as a backup rig.
If you have a FT 1000D I will add a Henry Radio 2KD-5 Amplifier to
the deal. 100 watts in gets you about 1000 watts out. I will trade this 2KD 5 Henry amp for a FT 990 or a FT 1000. It has new caps
and a pair of Emac 3-500. It is wired for Single Phase 240. The same
voltage that runs your dryer and electric range.
I also have a Icom AT 500 auto tuner. This tuner will handle 500 watts. It works fine and I have no use for ICOM equipment. My station is all Yaesu at this time. I will trade this tuner for a Kenwood TS 50, or other small HF Gen. coverage rig, or a good Short wave receiver. I also have a Pentium III 500 Mhz computer for trade. It has 128Mb ram, CD burner 52X CD rom S3 Virge video card, 1Gb hard drive, 10/100 Mb network card, Motorola SM 56 modem, Yamaha sound card in a ATX tower. Of corse keyboard and mouse included. I will trade this computer for 350 bucs plus shiping or a good HF moblie rig.
I am will to travel 100 miles from Athens GA. Drop me a email so we can work out the deal.
oris@dirtball.com
Happy Holidays
73 and thanks for reading

FRS is 5mw. Anything stronger is GMRS which requires the license.

> . Obviously, a lot depends upon terrain, buildings &
> QRM, but does anybody here have any experience with these things? If I were
> parked in front of a large high school, for example, and my daughter were

Maybe. If she were deep in the bowels of the school, it probably would be
difficult. Outside they work much better. Malls are a crapshoot. Car to car is
okay over short distances. I have used mine very successfully when I picked up
the inlaws at a cruise ship-my wife walked around looking for them(outside) and
I parked the car and looked in the other direction. Buildings are a definite
problem. It's tough at Disneyworld if someone is inside. It just depends on the
construction. They are great if you need to be in contact around the yard, or
shopping downtown, or out at the barn. JMO.

someone said.....

FRS is 5mw. Anything stronger is GMRS which requires the license.

This is not correct. FRS has a max power of 500mw, which is 1/2 watt.
Many of the very cheap units only run 50mw, which is 1/20th of a watt.
The power rating makes a big difference. I would not buy any model that
did not have at least the max power (500 milliwatts).

I have the Cobra Microtalks. They are more expensive, but have many
features, including paging, tone encoding, weather band reception, etc etc.

The 1/2 watt ones are FRS, and the two mile range can be somewhat
optimistic in the real world with trees, hills, buildings etc. 1/2 to
1 mile is more realistic. Think line of sight, and remember that metal
building frames can really degrade the distance. They are very
practical for ski area/mall/amusement park types of uses, or for
keeping a group together.

The 2 watts ones are GMRS, and again figure the real world range a
good bit shorter, maybe two miles. These require a no-test license
from the FCC, IIRC $85 per household for ten years. The manufacturers
mention this in the tiniest print possible.

Of the 14 FRS frequencies, and the 15 GMRS ones, 7 overlap.

Keep in mind that many others use these, so the use of the tones is
helpful to reduce hearing others.

Rechargable batteries and a locking keypad are very useful features.

Happy trails,
Gary (net.yogi.bear)

You have gotten several responses to choose from but no one has mentioned the charger.

I have found that anything that has to remove the batteries to charge is doomed to failure for lack of charging. I bought a pair of Audiovox units a couple years ago for use around the property(2.5 acres). The main reason I chose them was that the package came with a drop in charger. I haven't regretted it! Just pick them up out of the charger and you're ready to go...for sure your kids are not going to go thru removing batteries, charging, replacing batteries...Too much hassle, Dad!

Do yourself a favor...get something with a drop in charger.

Great radio, with one minor problem. The digital display goes out when switch detents for each band. It takes a little tweaking and the display comes on fine. I was just curious what spray cleaners if any would work and what particular wafer or section of the switch is the likely culprit.

Actually, the root cause probably is the detented position has grown a bit sloppy, with the resultant "wink" in each of the detented positions. So it may be a mechanical problem and someone in the newsgroup can save me some problem rediscovery to remove the "slop."

Yes,

Interesting thing- It reverberates between the Van Allen Belt and the
Ionisphere at 10Hz

10Hz is also the freq your Brain's Alpha Waves measure out at.

I presume those caps bridge the connectors and offer part of the
low-pass output.

>
>The drawing (SWR Bridge, December 1970, By: WCK) shows a unterminated

Sounds like a candidate for failure if you attempt to follow through
on that thought.

>There was a short piece of magnet wire still stuck inside the
>insulator in the center of the toroid, and I suspect this must have been a
>simple Faraday shield.

A piece of wire would be hard pressed to serve that function. Stuck
in the insulator? Descriptive, but not very informing.

>How many turns, and what spacing was it? And, how
>many turns in the main coupling winding around the toroid (L81)? I count 64
>remaining on this one, which may be close to the original number.

Well, at least that offers some place to start. It also suggests a
good amount of isolation, but simultaneously brings the prospects of
becoming tuned at an inappropriate frequency through stray
capacitance, perhaps this is justifies your assumption of there being
a faraday shield.

>
>Second, some component values. The trimmers (C80 & 87) connected to the
>center conductor were probably in the range of 7 pf. Is that correct?

Seems reasonable, but I doubt both are the same value as they form a
divider that will offer roughly the same ratio as the two resistors or

other coupling ratio this circuit uses.

>
>Are the RF chokes (incorrectly shown as C82 & 84) 0.5 or 1 mH, or something
>else?

Again, this and the 0.01 caps serve to filter the products of both
rectified outputs in the design.

>

>Has anyone else compared the two?
>
>All constructive comments appreciated, and yes, Reg, I know measuring SWR
>doesn't tell you much. I just want it for a relative output indicator.

Hi George,

Seems like the handbook would offer enough clues (I can't see either
your schematic nor the one you cite from the handbook). There must be
about a dozen passive components here: one transformer with three
(some are two) connections, two caps coupling from it, two resistors
terminating the secondary, two diodes, two diode loads (probably
variable to calibrate forward and reverse scales and perhaps more
resistors simply to limit range of adjustment), two chokes and two
caps to filter the metering current derived from the loads. There are
variations to this design that all go towards the same goal and their
size and connections vary accordingly, but generally show a symmetry.

The only mystery that remains is the winding ratio, 1:64, and the
shielding. The ratio seems OK. If you add a shield, it can only be
terminated at one end, otherwise you short out the induced signal (and
would probably blow the wire like a fuse). Skip the shield and test
the ratio by building the Handbook circuit. If the forward to back is
out of whack, the turns ratio is off, or the capacitive divider is.
Choose one and vary it (the ratio of the caps or the turns). Examine
the two caps or their values in the schematics and determine what
range of ratios they would support.

That's because they can't seem to ship it to the right address. Out of
the last two items they sent me, both times it was shipped to my OLD
address, which I moved from in April, even though I clearly entered my
CURRENT address in the order form online.

The first time, they resent the item to the right address and asked
UPS to recover the misdelivered one. The second time I told them to
cancel the order.

The only way I buy anything from HRO anymore is if I know someone
going there, so I can ask them to pick it up for me. I'll stick with
AES.

From: Heck <heck@zoominternet.net>
Message-ID: <3df95a96$1_2@corp.newsgroups.com>
Source record: 36002

Hello,
I just installed the YK-88A AM filter that I purchased on e-bay.
It seems to work good on AM...good audio and good signals...but now after installing it, I am
having a problem on side band...no signal strength deflection on the meter.
I can hear a signal here and there...very weak.
On AM and CW modes things seem to be normal.

I was wondering if anyone else has run into this problem after installing the YK-88A filter . Or if this is a problem I caused somehow. I rechecked my work several times to be sure I did it right.

Would appreciate any comments.

Thanks, Ed WB3LKO

You don't see any difference between waves that emerge from
interference identical to the way they were before the
interference and waves that don't emerge at all because they
are canceled by the interference????

Hint: One set of waves doesn't get canceled and one set does.
I'm not interested in diversionary detours into discussions
of waves that don't cancel. This discussion is about waves
that cancel.

> Failing that, there is no point in addressing even more
> complexity.

Seems to me you are the one trying to make the subject so
complex that nobody can understand it. One wonders why.
Nothing can be more simple than my simple example at:
http://www.qsl.net/w5dxp/fig2.gif Why are you so afraid
to discuss that simple example?

Rich

The above URL is an American site, sorry to p**s on your fireworks, but check the following...

Extract from www.straightdope.com/mailbag/mmetric.html

"After a six-year survey ending in 1795, this unit was determined to be 39.37008 inches in length. The name "metre" was chosen for this unit based on metron, the Greek word for "measure." Yes, my fellow Americans, the correct, official, internationally-approved spelling is "metre," not "meter." Technically speaking, a "meter" is not a unit of measurement but a device that measures stuff, like a parking meter. But seeing as how "meter" is pretty much the way all of us Americans spell it, that's the way I'm spelling it from here on in."

Consult www.nsc.gov.au/PDF_WORD/Info/L06.pdf for further (non American) information.

Order from HRO Phoenix. I have never had any problems with them. And HRO shipping is free over $100. AES shipping isn't free until $1,500, but they are a dollar cheaper than HRO under $100. I buy from both HRO Phoenix and AES Las Vegas, and find them both to be very good dealers.

Hi Cecil,

This is not an answer for specifics on your "Particular kind" of
interference and nor does it explain what makes it different from what
you percieve to be other kinds.

> waves that emerge ... identical to the way they were before
> waves that don't emerge at all
>Hint: One set of waves doesn't get canceled and one set does.
makes no sense at all. The statement violates the conservation of
energy (where did the canceled energy go?). You have less energy at
the end than you do at the begining and you haven't explained where
the balance is.

Show me the balance and how it correlates to this "Particular kind" of
interference.

From: gil <gilpi@mindspring.com>
Message-ID: <atcdmo$d9c$1@slb6.atl.mindspring.net>
Source record: 36009

Just got a nice Triton IV 540 works well but the tuning seems to be a bit on the "loose" side and towards the end of the scale actually feels like it slips. Is there a way to get a more "positive" feel to the tuning? Maybe tightening the tuning cord a bit?
I also read about "greasing the PTO" ?

Really like this rig and maybe one of you Ten Tec veterans can guide me in the right direction.

Thanks for the read

Merry Christmas

Gil

> wrong you are.
>

Rich,

All that proves is that Americans can't spell, officially. Can you
find a reputable European site that gets the spelling wrong? The Systeme
International d'Unites definitely gives the spelling 'metre'. It
is you and that NIST site that are wrong. Stick to feet and inches or
embrace the European spelling. The metre was defined here and the
responsible standards authority spell it 'metre'

Check
http://www.npl.co.uk/npl/reference/background_info.html
if you still feel that there is a unit of length called
the 'meter' in Europe. This is a .UK group!
Or try a google search on "metre spelling SI unit"

The U.S. has the same problem with litres.

'Look, mommy, every one of the soldiers is
out of step except Uncle Sam!"

great stuff. if you really want to know about schumann resonance and
related elf/vlf activity try these rather more scientific sites...
http://www.oulu.fi/~spaceweb/textbook/schumann.html
http://quake.geo.berkeley.edu/ncedc/em.intro.html
http://www-star.stanford.edu/~scr/Research.html
http://www-star.stanford.edu/~vlf/

it is amazing how much is attributed to the schumann resonance phenomenon if
you search on google, seems like everything from the end of the earth to
links to telekenesis and the driving force of all life is attributed to it.

> you percieve to be other kinds.

I can't say it any plainer, Richard. Perhaps my vocabulary is
failing me. There exists interference where the two waves flow
through each other unmolested. This happens when there is
no change in characteristic impedance of the medium, e.g. forward
and reflected waves meeting in a 50 ohm transmission line. There
exists interference where the two waves undergo destructive
interference such that their separate identies are lost.

> makes no sense at all. The statement violates the conservation of
> energy (where did the canceled energy go?).

In a transmission line, the energy reverses direction, i.e. it is
reflected. Waves can be canceled but the energy in the wave cannot
be canceled even though Dr. Best says it can.

> Show me the balance and how it correlates to this "Particular kind" of
> interference.

Discuss the simple example at http://www.qsl.net/w5dxp/fig2.gif and
all will become clear to you.

Hi group..

On my way to finding a new 50MHz beam antenna, there are soo many choices - I will need some help with opinions.

So far I've had a 5el NBS yagi from M E T in UK (shud have been marketed as "indoor use only", R I P after 2 years), and a Tonna 5 el (still up after 10 years).

I live in a high-wind coastal location, and do NOT have the budget to buy a new M2.

Looking for a 6 el yagi or a quad with equal performance.

Issues: Wind load, ice load, if purchased new it MUST be from inside EU (VAT, customs fees apply if from US).
My budget is limited to, say, 250USD=250Eu. Performance has to be a lot better than the Tonna 5 el :-)

I'd like to hear from you guys, re the following:

a) Any good/bad/hands-on experience stuff abt ZX-yagis, Trident yagis and DX Systems yagis (all inside budget, all available in EU) that u might have
b) alternatives that I missed, such as quads or other yagi brands. Tips appreciated - just don't say M2, I simply cannot consider it, and saving up for one is not an option, as I need the beam now. :-)

Can you help? Thanks for your time!

Cheers /Rick, SM7SCJ

FS: Harris RF-102A very heavy duty HF linear amplifier. 2-30 mhz continuous. Uses a single 3-1000 tube. This amplifier is very well (commercial) built and will put out well over the maximum legal limit. I have been using it with my Yaesu FT-920 and it really puts out the power. $1000 or trades considered. Includes manual. This thing is a brute if you want brute power. I traded one off 3 weeks ago and after I sell this one I'll have one left for myself. They are great and extremely reliable.

Hi Cecil,

This has run on too long without an answer except for the perennial
unveiling of the steamroller.

Blame it on poor language if you will, but even that defense fails to
strip away the unnecessary complexity that attends your discussion.
Occam's Razor insists that the simpler understanding we have of
interference does not require this additional baggage. As this added
complexity appears to be necessary for your logic, I see no purpose in
pursuing baroque theories that only you seem to be able to understand.

Name one other correspondent here on this board (or better yet, let
them identify themself) that can serve as a surrogate to your
discussion and let me see if I can get an answer to
>If I see the projection of the sun through a double slit against a

6764. Drake Manuals in PDF form

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-13 19:20:07 UTC
From: Pete KE9OA <n.gianakopoulos@worldnet.att.net>
Message-ID: <HpqK9.59993$hK4.4984752@bgtnsc05-news.ops.worldnet.att.net>
Source record: 36024

Hello folks,
I have manuals for Drake equipment in PDF form. These
would be for the 1A, 2B, 2C, R4A, R4B,R4C,
SPR-4, SW4 FS4, R7, R8, TR3, TR4, TR4C, T4X, TR6,TR7, UV3, MN2000, and other
tuners. Also, I have the '7 series owners and service manuals, along with
manuals for the RR-1, MSR-2, etc.
Price, including shipping in the USA will be $20.00 for each manual. In
cases such as with the TR7, I will include both the Owners Manual and the
Service manual for that price. With overseas customers, we will need to
discuss shipping first.
Any interested parties can e-mail me directly.

Pete Gianakopoulos
Mount Prospect, Illinois
USA

The cutoff in between positions is normal. Same as in the "blank" 6
oclock position. But the wiggling needed to get a good contact once
seated is not normal. That can either be dirty wafer switches, or the
plastic coupler on the shaft is getting a crack, and getting loose.
Mine has a very small crack in it that I've never fixed yet. It works
fine, but it puts extra stress on the plastic coupler if I turn
counter clockwise. So to avoid extra stress, I always turn clockwise
only. Any good cleaner should work. IE: tuner cleaner, pro gold, etc,
etc. MK

There is no added complexity, Richard, which tells me that you may
be ignorant of the details. See below.

Wave cancellation requires an impedance discontinuity, Richard. Your
two slit example is an irrelevant diversion. Here is an example of
wave cancellation: Two coherent waves traveling in the same direction
have been created at an impedance discontinuity. They are reflected
energy waves 1 and 2:

Wave1: 100V at 0 degrees with 2A at 180 degrees

Wave2: 100V at 180 degrees with 2A at 0 degrees

What happens when you add those two waves?

Hi Cecil,

With no surrogate either offered by you, or having stepped up in
several hours to offer an explanation that conforms to your
understanding - a closing synopsis:

We began with several premises:
>>>We don't have to worry about that in transmission lines.
So that we are on the same page, all waves are CONFINED to a
transmission line.
>>>that's all there is, two and only two waves
Ditto on being on the same page. TWO waves are CONFINED to the same
transmission line.
>>>they are from the one and only source in the system and are coherent.
Ditto on being on the same page. TWO waves are CONFINED to the same
transmission line driven by ONE SOURCE and they are COHERENT (even if
one is inverted with respect to the other).

That is sufficiently simple to not warrant a call on Occam's Razor
(barring someone's dispute). Then we enter into a nebulous region:

>>>they both encounter an impedance discontinuity
which is fine, but how did we get the two waves, from a single source,
BEFORE this discontinuity? Either something has not been revealed, or
this statement is in error.

This drives more complexity into the discussion with the odd notion
that:
>>>Being "sensible" to each other is what allows destructive interference
>>>between components of two different coherent waves traveling in the same
>>>direction.
Components? This dilutes the original TWO wave understanding (and
does not respond to where the second of the two came from, a problem
that is beginning to compound into even more complex explanations).
However, that is trivial in comparison to the basic mis-application
found in this quote above that denies the same operation of
interference in BOTH directions which is a fundamental property of TWO
COHERENT waves in a CONFINED line irrespective of all other
embellishments offered or to be added in the future.

The problems of this logic you offer is now doubly compounded and we
suddenly find a novel proposal for a "Particular" style of
interference that requires yet more explanation:

On Thu, 12 Dec 2002 22:17:09 -0600, OC_CAM's Razor
<Cecil.A.Moore@ieee.org> wrote:

> waves that emerge ... identical to the way they were before
> waves that don't emerge at all
>Hint: One set of waves doesn't get canceled and one set does.
makes no sense at all. The statement violates the conservation of
energy (where did the canceled energy go?). This compounds error to
the third degree. You have less energy at the end than you do at the
beginning and you till haven't explained where the balance is. You
haven't explained how two waves that exist in a closed system with
only one source; that are coherent (allowing for one wave's inversion
where appropriate); and that DO combine destructively in only one
direction and that DO NOT combine at all in the other (not even
constructively!) can exist as a physical reality. There is nothing in
physics that supports this odd relationship.

My stripped down discussion of classic interference:
>
>If I see the projection of the sun through a double slit against a
>screen, I will see light and dark bars due to "interference." There
>is absolutely nothing here that requires an impedance discontinuity.
>There is no causal effect enforced on either of the two slits, one on
>the other (they remain independent sources). The two waves are wholly
>independent of each other before they fall on the screen, and after
>they reflect (there is no magic zero time at the screen to change
>anything going on here).
was met by the steamroller and obvious indifference to the contrast
your argument makes with classical physics. This simple observational
evidence (Occam at his best) encompassed all the baggage of your
unnecessary embellishments and complexity of a crafted solution to
show they were false assertions across the board.

I've got a SignalCrafter model 30 SWR Power meter and would like to find another in working condition, or another SWR/Power meter with similar features.

The SignalCrafter Model 30 has two meters. The lefthand one displays Power in three ranges, 20W, 200W, and 2000W. The righthand meter displays SWR, and under the SWR scale is something they called reflection coefficient. It also provides the ability to switch between three antennas and a dummy load. I don't care about the switching for antennas, as I only use mine for a SWR/Power meter, and use a different custom switching array for my antenna switches.

The SignalCrafter Model 30 was made in the early 80's and is an ACTIVE SWR meter. There is no "set" knob or need to mess around with anything other than the switches that select the power level. It's operation is very similar to the dual panel meters that are built into the JW Miller AT2500 Antenna Tuner of similar vintage.

Does anyone know of the availability of a SignalCrafter Model 30 or similar unit, or have a schematic that could be used to modify (add circuitry) to the existing cross needle swr meters in my MFJ Differential T Tuners? I really dislike the cross needle meters that require you to interpret the swr by reading a red line where the needles cross. I can pretty easily make a new dial scale if I can get a schematic to build the active circuitry to drive the meters.

Thanks

Richard Clark wrote:
> which is fine, but how did we get the two waves, from a single source,
> BEFORE this discontinuity? Either something has not been revealed, or
> this statement is in error.

You are mixing gasoline and water. The two separate topics are:

1. What happens to two and only two coherent waves traveling in same
direction in a transmission line. There's no impedance discontinuity
to worry about.

2. What happens when two coherent waves, traveling in opposite
directions, encounter the same lossless impedance discontinuity.

Pick one and let's discuss it. Then we can discuss the other.

> Components? This dilutes the original TWO wave understanding (and
> does not respond to where the second of the two came from, a problem
> that is beginning to compound into even more complex explanations).

Again, you are mixing two completely different topics. We can discuss
each separately but we cannot discuss both in the same breath.

> However, that is trivial in comparison to the basic mis-application
> found in this quote above that denies the same operation of
> interference in BOTH directions which is a fundamental property of TWO
> COHERENT waves in a CONFINED line irrespective of all other
> embellishments offered or to be added in the future.

I have NEVER denied interference in both directions. Waves traveling in
opposite directions don't cancel. Waves traveling in the same direction
can cancel. What is it about "don't cancel" Vs "can cancel" that you don't
understand?

> The statement violates the conservation of
> energy (where did the canceled energy go?).

You don't understand. When I say the wave is canceled, I mean that the
voltage and current goes to zero. But energy CANNOT be canceled. The
cancellation of two coherent waves traveling in the same direction in
a transmission line causes an energy reflection in the opposite
direction, i.e. destructive interference causes a reflected wave of
constructive interference in the opposite direction.

We have TWO separate topics? This is becoming more bizarre and
neither topic responds to the question quoted above. And this was the
trivial error.

Cecil, you have already admitted that this may be a failure of
your/our communications and as you have yet to offer a substitute for
yourself that is equally versed in your view - I am stepping out as
your layers of complexity are becoming absolutely Byzantine.

Write again, later, when you find a collaborator who understands you.

yea whatever dipshit....you just money away from my kids
Christmas,,,,,the only reason I was selling this as a package and
cheap I might add so it would sell fast and I could have that cash for
Christmas.....Happy Now asshole.....let me guess now your gonna call
the FBI....we went from Narcing on eBay to Adelphia......wow aren't
you just to special.....please refrain from sending me anymore
email as you are doing nothing but pissing me off more and
more.....and you might think that's funny but you know what it
really isn't....now I'm gonna have to figure out how to sell that
somewhere else quickly to get my damn money for Christmas for my kids
stuff.....this is how the not so rich live....pretty isn't
it...someone like you comes along playing God and they fuck it all
up.....thank you so much ,it really is appreciated

My usual type of totally accurate and completely moral reply"

Hey,
Have fun yourself. You can tell anyone and everyone...They already
know...Anti-Boys been rattin out scumbags like you a long time.
You were just another notch on my holster. As far as being an asshole
goes, I consider it a compliment to see you call me that. If a
criminal hates me I am likely doing something right.

You are really stupid. You think I CARE if you TELL ABOUT ME? On the
contrary. If I did I would not have emailed you to letya know.

Do your worst, buttlick...

I think I will report your illegal business transaction to adelphia.
Since you like to call names so much you can go there and call them
names after your access gets pulled.

You are an impotent shitball and a little boy in a man's world. Take a
hike, sonny.

If you would only discuss the simple matched example at
http://www.qsl.net/w5dxp/fig2.gif
all of your questions would be answered.

According to Dr. Best, we get the two and only two waves AFTER the
discontinuity. Have you read Dr. Best's QEX article? Have you read
my web pages?

You would understand it, Richard, if you would stop the diversions
and simply discuss the example I present on my web page.

Well, I don't use "metre" for the same reason I never go to the "theatre".

British spelling is fine for Brits -- there's other countries in the world, you know, with different spellings -- hell, even different languages.

I was just thinking of something else...If you do have a loose plastic coupler, that is usually the RF switches up near the final section that get out of whack. Most likely would not effect the readout. What happens is you get "loose" connections to where your output fluctuates or drops out when you wiggle the knob. The couplers crack because of the way they were overtightened at the factory usually. MK

This is an ICOM IC-751 HF Transceiver with Shure 444D Desk Microphone and Computer Audio Interface. All items are in very good to excellent condition and ready for plug-n-play operation.

This had been on eBay with an automatic antenna tuner. The antenna tuner has sold. I am selling this package w/o the antenna tuner and will list it on eBay very soon if not sold. See my website for details.

Pacific Coast Parts has the couplers. They're $9.50 each plus $8.50 to ship. I forget the part number. The name of the part is "universal coupler". They're over priced and shipping is outrageous. But when you need one, you need one. Nobody else has them. Unless you can find someone to fabricate them.

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100
watts HF + 6 Meters.
It has a Auto tuner and the MC 100 Desk Mic. In the deal you will get
the technical supplement too (AKA Service manual), as well as the owners
manual . I also Have the 3 KW Roller Inductor Antenna Tuner. They are in
good shape I will trade both for a FT 990 or a FT 1000.. I have been
using the FT 920 as a backup rig. Drop me a line so we can work out a deal.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.shortwave,uk.radio.amateur

The ionospheric D-region reflects VLF signals as does the earth's surface. These two reflectors make a spherical cavity with the first resonance at about 8 Hz. A very good antenna system and VLF spectrum analyzer will show a slight peak in the background noise at this frequency. There is nothing mysterious about the Schumann Resonance.

The manual of our first Sony Color TV also came in Dutch.
Never had such a good laugh.
Even orse than the English version.
Still wonder why such large manufacturers save on a few bucks to have
their manuals corrected by a "local".

As a technical writer who desperately needs a job, I, too, have long been angry with the Japanese for their miserable documentation. * (The manuals with German products can be even worse, believe it or not.) I have repeatedly asked Sony to hire me to oversee English-language documentation, but have been repeatedly rebuffed.

In the early years of the Japanese consumer-electronics invasion, manuals were of much-higher quality. Whether this was because writing jobs were farmed out to the limited number of Japanese who spoke idiomatic English, or because the manuals were written/edited by the importer, I don't know. But I do remember buying a Nikon Photomic FTn body in 1970, with a manual written in clear, simple English -- probably by someone at EPOI. It was the first and last really good "Japanese" manual I ever saw / have seen. **

I once asked Ken what's-his-name at Denon about the problem. He told me Denon would send the manuals to him for review only a few weeks before shipping the product -- and would invariably ignore his corrections and suggestions.

There are several reasons why the manuals for Japanese and German products are so poor.

1. The most-fundamental is that the writers DON'T KNOW what constitutes a good manual! The Japanese are notorious for "tree" manuals -- where all the details are explained in excruciating (and sometimes pointless) detail -- without presenting the "forest" -- an overview of what's going on.

In general, the best way to explain anything is to start with the "general" and work down to the "particular." The Japanese don't understand this.

2. The Japanese worry about "losing face." They refuse to acknowledge they don't know how to write good manuals in good English. Accepting corrections or enhancements from foreigners is an even worse loss of face.

3. There is such a overwhelming flood of new products that there's no time to do good manuals -- even if they wanted to.

4. They don't understand that good documentation helps your company's image and, in the long run, reduces the money spent on customer support.

* About 10 years ago Mitsubishi tried to produce "good" English-language docs for their VCRs. The resulting manual was nearly 100 pages and hopelessly "overwritten." Whoever wrote it never read Thoreau.

** The manuals for my Yaesu amateur-radio equipment are written by the importer. There's room for improvement, but they're not at all bad. I hate to think what

they'd be like if the Japanese had written them.

I've heard that the Japanese school system is "broken" when it comes to
teaching English. That the textbooks have basic flaws and teachers trained
with these flaws. And that this produces students that are reasonably
consistent in producing similar screwed up English when they write
about the same things. And that nobody in the Japanese education
system wants to "lose face" by owning up to this.

A friend owns an advertising company, and he and his people need to
fix and filter the copy from his Japanese clients. But his clients have
already made the first step in realizing that they need help with that.
The ones that don't produce ads that make little sense to Americans.
American companies screw up in this as well, did you know that
the name of the Chevy Nova car means "no go" in Spanish. Thus bad
sales results in Latin America.

> 4. They don't understand that good documentation helps your company's image and,
> in the long run, reduces the money spent on customer support.

Good design of a consumer product would result in a product that can
be figured out without having to read a manual. Or at least good on screen
comments to walk the user thru the process of programming the VCR.
Including error messages saying "The programmed amount of time is
not gonna fit on the tape at 2 hour speed, should I 1) record the first
2 hours of the program, 2) change the record speed on the tape, or
3) have you change the program length?

My 2 cents, for what it is worth.

When traveling in Japan, I found that very few Japanese could speak English, even though it was a required second language in their schools. Our tour guide, who had been a middle-school teacher, explained this by saying that the schools teach reading and translating, but virtually no conversational English.

Compare this to the Chinese system, where all the young students strive to perfect their English. On the Bund in Shanghai, I was surrounded by young people who just wanted the opportunity of speaking English with a Westerner.

To get back to the manuals question, let me begin by saying that I spent 40 years in the technical writing business. Too often, an acceptable manual written in a foreign language is converted to English by a *translator*. (You will note my emphasis.) To translate anything technical into another language requires a technical writer or editor who is *fluent* in both languages and familiar with the discipline involved. Otherwise you get "Engrish."

When Sony introduced their CV-format 1/2" video recorders in the 1960s, Sony of America did its own instruction books for them -- complete with photos -- and the difference between those and an instruction book from the 1980s (or later) is like night and day.

I think I've posted this here before, but here it goes again. When I worked in sales in a store that also held an importer's repair service in the late '60s-early '70s, one piece of equipment we had still sticks in my mind.

A VOM with "HIOKI ERECTRIC COMPANY" carefully reverse silk-screened on a brass plate on the front.

Wish I'd have bought it.

I have a home brew CT-17 "like" level converter cable that will let your Icom radio talk to the PC and vice versa. Requires icom compatible software. Plenty out there. Been in use at the club station for couple years with no problem on the IC-736. Not needed any more. No DOA or money back (less shipping).

1/8 inch mono plug on one end (for the rig's data jack) and DB-25 connector on the other end (for computer serial port).

Asking $10 plus shipping. Great xmas accessory buy.

I have the manual to my dad's F2S somewhere around here. Well written,
but a bit overentusiastic - "Hold the camera. Feel it's strength and
promise." "Nikon also makes binoculars - they're made from the same
excellent optics as your camera lens" But overall a great manual -
"Even if you're a professional, it's always good to review some
'basics', as yuou might have forgetten them over time"

I remember reading a Panasonic VCR manul that sugessted 'editing' a tape
by recording a dead TV channel over the parts you wanted to 'edit' out.
I somehow seem to think that by 'editing', they meant erasing the dirty
parts of the recording. Or they thought we were a nation of Nixons...

Ah, so (ahso?) that explains why some {most} of those manuals are written ass backwards! I never could make sense out of their manuals or their "language".

Actually, a friend of mine was living in Japan a few years ago. Yaesu's manual writer was retiring and suggested he - my friend - apply for the job. He did. He got it. He told me they use a computer program with most of the lay out already in format... it was only a matter of plugging in steps and so on. I'm not sure if he still works for them or not, as I have found out he is no longer in Japan, but on the west coast. But I did quiz him one day about why those manuals are so damned goofy.....When I get a new rig, I look to see what the buttons do and throw the manual in a corner. I waste more time doing it by the manual. I hate the way they bounce you back and forth in the pages like a ping pong ball to figure out a command or two.

An old Panasonic cassette deck service manual describing their new
"Relay Logic Controls" stated: Check reray one. If not reray one check
reray two.

If not reray one WHAT? :) I told the boss and he told not to make fun
of the japanese, that they don't really talk that way. I had to go get
the manual and show him before he would listen. Then he sat there
scratching his head trying to figure out what they meant.

Well, you can't come down too hard on the Japanese..At least they are trying. WE are the ones failing.
Our language is starting to suck more each day with some of the newer words or expressions coming about. And my pet peeve is, it seems "most" everyone can learn our language EXCEPT those who speak Spanish.. WHY is OUR country catering to them...You live here, you damned well ought to be able to speak and read HERE. If I went to their country, I would have to learn Spanish. I see our Social Security, Welfare and other agencies catering to them... If I'm not mistaken the last time I called the Social Security office I was met with Spanish "FIRST"...WHAT THE HELL? THIS IS AMERICA - an ENGLISH speaking country..... If the Germans, Chinese, Japanese, Russians and so on can speak English - broken as some of it may be, why the hell can't these people? Is it something in their system that prevents it:? Best part is, "WE" are allowing it to happen. Or it 's being shoved up our ass, one of the two.

In my earlier post, I did make a crack about the Japanese manuals being backward,.but then again if my memory serves me correct, they do read and write right to left. So, aside from me being a smart ass, I was not totally wrong (if my memory is correct) in how they do communicate in writing.....

To comment on the recent posts. I have a Japanese friend, who is here trying to get into UCLA's film preservation graduate program. He sent me his application essay for comments and corrections.

It was and is a well written and interesting essay about the differences between Japanese American culture verses other Asian American cultures, based on his observations as well as the research of the World War II internment.

He was somewhat surprised that I did not change all that much, and frankly, so was I. His written English is quite a bit better than his spoken English. Part of the problem is with simple articulation. He's much easier to understand in person than on the telephone, for example.

Most of my corrections involved verb usage and substitution of nouns that I thought were more precise for the context. And of course, as Truman Capote said in "Murder by Death", PRONOUNS! In a few instances, I rearranged sentences, but for the most part, I tried to refrain from that in order to preserve his words whenever possible.

A few things struck me. One was that the errors tended to be consistent. Another was that while he would often use a word that technically appeared correct, there was another word that would work better. Perhaps it is just the case that English has five words for the same thing sometimes, and the subtle differences between them in actual usage is very much an acquired thing.

This was an essay, not a technical instruction manual. It was about the equivalent of 3 typed pages, single spaced. It took me about an hour to do my "magic". Of course, part of my job is writing letter to clients about somewhat sophisticated financial instruments, and me and my boss often edit each other's work, so I am used to the task.

Still, I wonder, considering my lowly salary, how much could it cost for Sony or Nikon to run their manual by a technically competent native English speaker for editing? I'd do it for them. $500 a pop.

Regards,

DAve

Hi, Lou,

I wondered about that also, while living in California for a number of years. One day I went on a rant very similar to yours, and my boss at the time (and *NOT* a Hispanic American) pointed out that California originally belonged to Mexico, and was annexed by the US - and that therefore, Spanish was California's first language.

We have a similar situation here in Canada, and it's not unusual to hear tirades very similar to yours. However, there again it was merely due to the accident of history that the English-speaking army conquered the French-speaking army at the Plains of Abraham. I'm glad that the Quebecois had the strength and sheer stubborness to insist on equal treatment of their language and culture -- even at the "expense" of "having to put up with" French-language text on our cereal boxes. Canada is a better place for it. I think that the United States of America gains from the Hispanic, African, and European influences also.

Cheers,
Fred

Sometimes you get a dictionary translation. From the directions for assembling a stand for the Yamaha DX-7 synthesizer: "Fuck the left assembly to the base"

Guess the dictionary had slang equivalents for the word "screw"

If the unit's bandspread will allow it to tune there without
degradation, then I may be able to program it for you (need to check and
see if I have the right cable).

You -really- don't want to go chasing copies of Motorola RSS
without buying it. Their licensing agreement is positively Draconian (I
know... I had to sign it to get my stuff started!), and their legal
eagles can and will make an example of anyone who they think is
trafficking in pirated RSS.

Anyway... http://www.bluefeathertech.com/rf.html -- Let me know via
E-mail if you want me to try programming that beastie.

Keep the peace(es).

Seems that in the Chinese language, the English pronouns "he"
and "she" map to the same Chinese word. Which can make for
some funny errors. A Chinese friend was telling me about his
girlfriend: "My girlfriend, he likes to dance...". "he"? I knew that
he wasn't gay or something like that, I recognized it as a translation
error.

>

I have heard that English has a very large vocabulary compare to most
other languages. Many words have been pirated from other languages.
Some Chinese guys I have worked with said that that large vocabulary
drove them nuts learning English. But each word has its own precise
and "flavor" and nuance. The SAT test uses an analogy format to
test your knowledge of this (but I've heard they recently dropped that).

As much Spanish language influence we have in the United States, I
find it interesting that most products designed for the North American
market have instruction manuals in English and French. To my
knowledge, Canada is primarily an English speaking country with the
exception of Quebec. Yet the instruction manuals for my TV, VCR, DVD
player, etc are bi-lingual in English and French with nary a word in
Spanish.

Hm.. curiouser and curiouser. But, come to think of it, it's probably
because bilingual instruction manuals are legislated in Canada. It
follows that it's cheaper to supply the same manuals to the USA, saving
the cost of a separate English-only manual.

I remember a time not-all-that-long-ago when manuals were routinely
supplied with English, French, German, Italian and Spanish sections,
sometimes additionally with Hebrew, Arabic and Greek.

Cheers,
Fred

Not even the francophones I know care much about that -- what they seem to want is their heritage and language protected at home and that sentiment is more consistent with a unilingual (sp?) policy, i.e. no English in French speaking communities (esp. Quebec); they fear that as more immigrants arrive in their communities, the immigrants will not adopt the French language and assilimate into the French heritage. Whether or not one can buy stamps in Alberta speaking only French seems irrelevant.

Bob, I totally agree with you on this.

I occasionally "translate" technical manuals from English to French
and vice-versa. My advantage is that I am fully familiar with the
discipline (HF communication systems and equipment). We used to farm-
out some of these and the results were simply horrible.

Richard Clark wrote:
> We have TWO separate topics?

Yes, we do, Richard. The two topics are:

1. Wave interference between two coherent waves traveling in opposite directions in a transmission line, i.e. between a forward wave and a reflected wave.

2. Wave interference between two coherent waves traveling in the same direction in a transmission line, i.e. between two forward waves or two reflected waves.

Wave interference between a forward wave and a reflected wave is relatively easy to understand. When the voltages add, the currents subtract, and vice versa. That means when we have destructive interference between the two voltages, we have a corresponding constructive interference between the two currents. When we have constructive interference between the two voltages, we have a corresponding destructive interference between the two currents. The opposite direction of movement between total voltage and total current automatically keeps the energy equation balanced.

The difficulty that you and others seem to be having is in understanding what happens between two waves traveling in the same direction in a transmission line. The voltages have the same phase and the currents have the same phase so vectorially adding them results in an overall increase or decrease in energy in the resultant wave (except when the two waves are orthogonal to each other).

An increase in energy when two waves are vectorially added must be accompanied by a decrease in energy elsewhere. A decrease in energy when two waves are vectorially added must be accompanied by an increase in energy elsewhere. The conservation of energy principle will not allow anything else to happen.

If the angle between two phasor voltages/currents is less than 90 degrees, their vectorial addition will result in constructive interference. That constructive interference must be accompanied by an equal magnitude of destructive interference. In a transmission line system with an impedance discontinuity, if constructive interference occurs on one side of the discontinuity, an equal magnitude of destructive interference must occur on the other side of the discontinuity.

If the angle between two phasor voltages/currents is 90-180 degrees, their vectorial addition will result in destructive interference which must be accompanied by an equal magnitude of constructive interference on the other side of the impedance discontinuity.

> Write again, later, when you find a collaborator who understands you.

I'm working on that, Richard.

But by not learning and becoming proficient in the language that dominates the rest of the country, the people cut themselves off from the options that are accessible to the rest of the population. While being bi-lingual would be a great asset, the high paying jobs in this country require you to be proficient in English as that is the language in which you will need to conduct business negotiations. It is the language that the lawyer will need when he presents his case in court. Even in "ordinary" positions, it is essential. Receptionists even in areas that are dominated by Spanish in the US need to be good at English.

Thus is essential that people in the US learn and use English well. Otherwise they are limited in opportunities by language. The country does them no service by having them in elementary schools, etc that use Spanish for teaching.

The United States has benefited immensely from its melting pot culture. People can preserve their culture and languages in their homes and communities but also need to participate fully in the overall culture and

language to benefit from the immense diversity and opportunities of this country.

The only manuals I've ever seen that "routinely" included instructions in multiple languages are those from Polaroid. The manual for the Macro 5 SLR is in English, French, German, Italian, Spanish, Japanese, and Russian. And that's _not_ very many languages for Polaroid -- some manuals include Arabic and Chinese.

6854. FS: Yaesu FT-1500M 2 meter transceiver, Perfect

I have for sale the Yaesu FT-1500M transceiver in like new condition and works perfectly. 50 watts out, very sensitive receiver, scanning, etc, etc. Comes with original mike, mounting bracket and hardware, manual and box. Will be carefully double-boxed. I would like to get $100 plus shipping. Have the chance to get an Icom 706G so I won't be needing this excellent rig. Thanks for looking.

When I took the SATs over 37 years ago, I wondered why I got "only" a 750 on the English part. The reason, of course, was the analogies.

I have a superb vocabulary and understanding of the subtle differences in meanings among words, but the analogies drove me crazy. They require making subtle distinctions in a very short time. I don't think they reveal much about anyone's vocabulary or ability to think.

I know this is all in good humour; eh?
But at this point, as a Canadian cousin, and since we are making
fun of 'Japanese English', I have to comment as follows.

1) If so; why do we buy so much Japanese electronic equipment?
Because it works well? Maybe?
I don't think we can plead 'slave labour rates'. Japanese
salaries/wages and living standards have been, at least until
recently, some of the highest in the world!

Have to agree that US technical documentation such as that
provided for equipment surplus, available publicly after W.W.II,
was/is among the best in the world. Usually well written and more
than likely well illustrated; in one language only, ENGLISH!
And despite the tremendous co-operation and help between the
Allies of those times there were jokes about it.
For example British Techs. had to be warned NOT to say something
was 'US' i.e. Unserviceable (or something less polite in
colloquial use!) and, in the interest of co-operation to use some
other more tactful terminology!

These days North American products, with exception of some
produced in Canada with French language on an equal basis, not
usually accompanied 'at all' by brochures/technical info. in
other languages! So we'd better be careful before pointing any
fingers?
BTW one can visualize a Japanese comment such as; "They don't
understand our technical manuals but they still buy our products.
Big time! Must be doing something right?".

2) Educationally similar criticism might be made of our 'North
American' school system in regard to subjects such as world
history, world geography and lack of knowledge of other countries
and cultures! In other countries it is sometimes perceived as a
sort of "If it ain't Amurican it don't matter", attitude. (The

poor grammar and spelling is deliberate btw!).
On other hand I have friends in Europe, which is very small, who do not realize that North America is 4800 miles wide; and think that you can hop over from say Boston on the east coast to Vancouver on the west in a few hours drive! they also confuse Canada with the United States!

3) Japanese make good motor vehicles too. Although my last (new) Toyota partially made/assembled in USA was not as good as my other Toyotas made in Japan itself. We now drive Nissans. I can't recall what percentage of the North American car market is now made by Japanese based companies? It is high in spite of tariffs and trade barriers! Documentation is OK. Some good maintenance and repair documentation for our Japanese vehicles has been available, in English, from Britain!

And just to put the shoe on the sole of the other foot; ever see an unpractised 'westerner' (say myself) try to use chopsticks? Pathetic! Please may I have a fork?

Cheers. Terry. Newfoundland, Eastern Canada; settled by the Vikings at 'Lanse Aux Meduse' around 900AD!

Also a few miles from where Marconi (An Italian btw) received the first Transatlantic wireless telegraph signal from Cornwall, England in 1901.

Bob: Excellent explanation IMHO. And I recall a story (apocryphal
maybe?) about attempts to translate a Russian technical treatise
about a hydro electric project, into English using a computer.
Right in the middle of the text appeared the words "Water sheep".
Puzzled they ran it through the computer again. Same result!
So they got hold of a technical expert (like yourself) who really
could understand Russian. "Oh that's simple" it was explained.
The translation is really "Hydraulic ram". Yep. Makes a lot more
sense doesn't it?
Now don't go 'crackers' laughing at this. Terry.
PS. BTW Bob, I tend to use the 'English' rather than the
'American English' speller-check on this computer. You should see
some of words it doesn't like!

Hi Lou: (You are probably named after the kings of France? e.g.
Louis 14th.)
Alternatively an English/Welsh version of your name could be
"Lewis" or "Lew".
In Spanish; "Luis"?

Quote: {WHAT THE HELL? THIS IS AMERICA - an ENGLISH speaking
country......} ?????

Some people would dispute that! :-)
However the beauty and flexibility of the 'English language' has
been it's ability to adapt, change, and take in new words from
other languages and cultures! And it survives as, at the moment
anyway, lucky for us Anglophiles, the predominant business
language of the world. 'American English' is one version; a very
important one.
If we heard the 'English' of Shakespeare or Chaucer as originally
written we would not understand it.
More recently; for example the word "Bungalow" is from India.
Other words, such as "Quota", "Forum", "Constitution", "Voter",
"Senate", "President", etc. are derived from Latin, Greek etc.
French words very little changed have entered the language; quite
apart from the newly invented ones of the electronics and
computer eras.
We might as well get used to it! Welcome to the rest of this
multicultural world!

Bonne Chance. (Good Luck).
PS. "Bonne Chance" is also the name of a hostelry in New Orleans,
btw.

Which is why cultural background can have such an influence on
results. Imagine trying to explain 'reaping' or 'making hay'
(literally) to a person of the Innu (Esquimaux/Eskimo)
culture/background who has never seen grass or a cornfield. Or
the concept of a snow machine to someone in the Sahara desert,
say, who has never encountered snow! The Innu have as many words
for different types of snow as we have for different types of
cheese!
Imagine trying to explain 'radio antenna', 'transistor',
'battery' etc., to someone living in the Amazon jungle.
Another example: Some words/expressions are culturally taboo.
The term 'Knocking up' has entirely different meanings between
North America and Britain, for example.
In Britain it refers to waking people up on a workday morning by
knocking on the bedroom window! The other (North American) usage
will leave to reader's imagination.
But thank goodness we are NOT all the same. Even those of us who
all think we speak 'correct' English!
Have fun chaps! Terry.

Service announcements on the NYC subway can easily be nine languages,
depending on the line. Also, advertising can run through a few. I've
even seen cyrillic billboards in parts of NYC.

The #7 subway line has something like 120 ethinc groups along it's
route. It's supposedly the most diverse part of the world...

Many people in the NYC area are bilingual, or even trilingual. I work
right next to the NYC border and there's at least 4 different languages
spoken in our shop.

Well, the pronunciation is the same, although there are separate written forms for "he", "she" (but I got the impression that it is of recent origin), "it" (inanimate object), "it" (animal), and deity.

What is your opinion of the Quebec language laws that make it a crime to speak English in the workplace, Illegal to have an English language sign in the window of your business, and illegal to have an English language internet site even if all the business done by your company is in English. Unless a person can prove that their parents had English as their mother tongue their children must be educated in a French school.
French in Quebec is much more than the language on your cereal box. Being an English speaking person in Quebec is almost a criminal offence.

I recall a letter in one of the L.A. newspapers many years ago from a Japanese-American who had come here as a child speaking only Japanese. He strongly protested the concept of bilingual education if it meant that one could graduate from high school without a decent knowledge of written and spoken English.

My wife came to the US from the Netherlands when she was 9 years old, which was still early enough to acquire a perfect English ("American English," anyway) accent, although some odd Dutch idioms translated word-for-word into English pop out sometimes. There was no "bilingual education," but there was a Dutch-speaking teacher around who was able to help her.

I am a great supporter of bilingual education in the form of "immersion programs," no matter what specific language is used. We know one man whose daughter (Anglo) was in a Spanish immersion program in Oregon and had all her science and math taught in Spanish all through high school. Our school district is now proposing a similar move (language not yet decided -- depends on who is available), but there is much opposition despite the rich variety of languages spoken here (Long Island, NY). I say that it should have been done long ago, and I don't care whether the second language is French, Spanish, Chinese, Japanese, Korean, Hebrew, Greek, Hindi, Swahili, or....

Q. What do you call a person who speaks three languages?
A. Trilingual.

Q. What do you call a person who speaks two languages?
A. Bilingual.

Q. What do you call a person who speaks only one language?
A. American. ("British" is another acceptable answer.)

There is alot of truth to this. Our firm did a stint for Subaru as a
Consultant
once. Cost them big $$$ for our servicers. They took the reports
and suggestions (three volumes worth, each the thickness of a Manhattan
telephone directory..) and sent them off to Japan. That was the last
we saw of them. They paid us but it's tad frustrating to think that a Year's
worth
of work is sitting collecting dust on some shelf at Subaru (Fuji Heavy
Industries) HQ in Tokyo. (I just hope they don't "reverse-Jinglish" it -
mabey
that's why it's taking so long? - grin)

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100
watts HF + 6 Meters.
It has a Auto tuner and the MC 100 Desk Mic. In the deal you will get
the technical supplement too (AKA Service manual), as well as the owners
manual . I also Have the 3 KW Roller Inductor Antenna Tuner. They are in
good shape I will trade both for a FT 990 or a FT 1000.. I have been
using the FT 920 as a backup rig. Drop me a line so we can work out a deal.
oris@dirtball.com
I have a Icom ICR71A Shortwave receiver that I will trade for a working
Viking Valant and SX 300 or Hamuland HQ 110. I'm looking for a good AM Han station
with at least 200 watts out. I hope to find something to work with my Audio rack.
I also have a Henry Amp 2 KD 5 Desktop,(It needs a new Plate amp meter) two 3-500s 100 in
will give you 1250 out, New Caps,
that I will trade for a Globe King or full legal output Ham band AM transmitter.
this is a pickup trade only. I will be willing to travel 100 miles from Athens GA.
Happy Holidays
73 and thanks for reading

In my opinion that's ludicrous, of course. Even thinking francophones
are appalled by such reactionary policies.

I spent a summer working in Ottawa a number of years ago. On several
occasions I made little day trips into Quebec. The hostility would
sometimes be palpable when I'd ask for something in English at a
convenience store -- until I explained in my broken French that I was
just a dumb westerner, or pointed to my BC license plates. Then all was
well, we'd share a laugh, and magically my new-found Quebecois friend
would demonstrate a workable command of English.

The point of the story is that in situations where there has been a
long-standing conflict, everything is perceived in terms of that

conflict, and anyone walking into a francophone convenience store and speaks English "must be" a jerk by definition. But when the realization hits that this is an outsider to the conflict, suddenly the conflict loses its hold on the situation.

Cheers,
Fred

6872. FT290R - Slight Fault

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-15 18:55:20 UTC
From: "Neil (G1TZC / M3TZC)" <g1tzc@cheesefamily.plus.com>
Message-ID: <sf4L9.1534$4k6.191024@wards>
Source record: 35983

Hi All,

I have got a slight fault on the FT290R, in that the radio operates fine BUT tunes in 1K / 0.1K steps even on FM.

The unit has been modified to give selectable bands 143.5 to 148.5, 144 to 146 etc..., but worked fine for ages after the mod.

As I say it is more of a pain than anything, as the radio works fine.

Yes, several years ago, visiting my grandparents in their apartment
near Brighton Beach in Brooklyn, we were talking with one of their
neighbors.

She mentioned that besides English, she could speak at least somewhat
in Italian (her heritage), Spanish, and Yiddish, and figured she could
get by in most parts of the city.

In a diverse environment, it's not a bad idea to learn a few basics in
the other languages. You don't have to able to write poetry in the
other language, just be able to order a meal.

Happy trails,

Generally it has become accepted practice on Rec.Swap NG's for auction ads to be listed with an "FA" in the header so that those who don't want to look there won't, and those who can actually figure out how to set up a filter can avoid them altogether. Of course, based solely upon your grammar, punctuation and spelling, that may be expecting a little much in your case. This guy probably didn't know about the "FA" understanding, but does now. There are, however, a lot more tactful, polite, and civil ways to inform him of the error than the way you showed your ass.

No disrepect, but if you had said you were from Ontario, you would not
have been sharing a laugh. And there's nothing about Ontario that makes
it any different than BC, except it's closer to the Quebec border.

Our son is studying French ("standard" French, not Quebec French) in
school (Grade 8) so we thought of taking part of our last summer
vacation in Quebec and give him an opportunity (and me -- but it's been
a looooong time) to practice -- until we ran into a native French
speaker (of "standard" French), who told us that the speakers of Quebec
French hate speakers of standard French almost as much as they hate
speakers of English. So we settled for a vacation in New England instead.

The only one I can find with a digital readout was the SW-7800. I
believe it was the last general coverage receiver produced by
Heathkit.

It's because Canada is officially bilingual, no matter what the
demographics say in practice. It is illegal to sell stuff without
bilingual labelling. It's cheaper for manufacturers to make one
set of docs, in compliance with necessary law, than two just to
make things practically better for their customers. The only way
for the spanish to be catered for is for the US to be officially
bilingual. (I wouldn't hold my breath).

Similar to the problem in many latin languages, where the
adjectives like "his" or "her" agree in gender with the
noun, not with the possessor. So common slips might be
to say something like "his shoes" referring to a woman.

The legislation (I recall it as being Bill 101?) is actually that
signs displayed in English must also have a french equivalent, and
the english may not have larger font or brighter colours.

>and "flavor" and nuance.

It's very true. You can see the roots of this in things like
Dutch [and Afrikaans] which I find have far fewer words with
the fine distinctions, and that most words have obvious roots
in simpler combinations ["shell-frog" is a turtle?].

It's not that English has pirated the other languages, but that
it evolved (very recently, i.e. last 500 yrs) from a lot of inputs
thanks to all the invaders. (Roman, Norse, Saxons, Normans each
giving their input). Consider that the coarse, "animal" terms are
Saxon while the fine, "cuisine" terms are (conqueror, "lingua
franca") Norman, for example.. (cow vs beef). It's all a matter
of development and how many ingredients went into the soup pot.
Anyway, I think it's far more exciting to have a surfeit of words
than an excess of rules. [e.g. 16 verb tenses in Finnish?]

Seems to me, it shouldn't be too much trouble for anyone to clearly indicate in the subject line what the post is about. If it's for sale, auction, trade, need help or whatever it should say so in the subject. That's what subject lines are for! Then everyone read what they want and ignore all else. Anything else is akin to trolling... Seems to me.

Japanese lacks a future tense, but has no particular difficulty
conceptualizing the future. You just throw in a postpositional phrase
describing the time frame, and then the verb is interpreted relative to
that frame rather than the present.

The HR1680 (RX) and HTX-1681 had red analog dials- although last month's QST reported the RX had digital display- I can find no confirmation of this. The RX was 100% solid state. Ever since the QST article, EBay prices for this pair have shot up noticeably.

I'm surprised you didn't throw a future conditional into that one...
"... I shall have been in California". ;-)

(Not sure if I could even still rattle them off. Future conditional was
just so weird I remembered it all these years.)

Cheers,
Fred

How does one say McDonald's or Pizza Hut, or Radio Shack in French?

The tunnel connecting Britain and France across the English Channel
was in controversy not long ago from what I remember. Seems on the
French side, signs said, "Le Tube." This was apparently looked upon
as bastardized English rather than French.

I do admire the French for being so protective of their language and
culture. To do so here in the United States we would be labled as
racist. Then again, the United States doesn't exactly have a dominant
culture.

Those would remain the same, since they're trademarks. However, if you
were to try to advertise "Order a pizza straight from the comfort of
your radio shack" (meaning your shop) you'd have to call it "chalet de
radio" or something to that effect. ;-)

Cheers,
Fred

6919. ICOM IC-U400 Mobile UHF Transceiver - New in Box !

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-16 17:31:10 UTC
From: p34901@hotmail.com
Message-ID: <694df9e0.0212160931.7cceee1@posting.google.com>
Source record: 35929

ICOM IC-U400 Mobile UHF Transceiver - Commercial grade

I have two brand new (never been used) ICOM IC-U400 mobile prgrammable transceivers in original boxes. These radios are commercial UHF FM for business band (450-480 mHz 16 channel but can be easily modified/reprogrammed to include Amateur band, scan, split freq. for repeater operation, priority, PL Encode/Decode)- 35 Watts brand new in box with all accessories (external speaker, hand-mic, mobile bracket, DC power cable, etc). I am also including the EX-494 Programmer kit so you can program any UHF frequency. This is a nice sturdy trasceiver built to meet higher specifications than typical Ham gear. You will notice that it is almost intermod-free anywhere.

Asking $325 + shipping for both radios and EX-494 Programmer Kit.
Or I will sell $150 + shipping for each IC-U400 (I can program the frequencies you want since I have EX-494)

here in town we haveonly english signs and only english bilboards. But all
depends where. Kamloops have alot of native languages for STOP on the sign.

> They don't even bother with Arret in France.

Those signs, in the UK, back in the 1940s and 50s, used to be
labelled "HALT".
Again only four letters to convey the intent.
Much more commanding I thought than a wishy-washy sort of "please
'STOP' here"!
Wonder what they say today?
And in France they don't seem to be so preoccupied with
protecting 'La langue'!
So you get 'Le Rost Bif' and 'Le footbal' etc. Meanwhile we enjoy
'Crepes' and 'Pie a la mode' etc.
Cross cultural stuff like that!
BTW I never knew why British castle gates were protected by a
'Port Cullis'; until I saw a sign in French Canada warning about
sliding doors 'Porte Coullissant'. (Don't trust my spelling btw
in either language!).

6923. Trade a Heil CC-1 Mic Cable for Kenwoods for a CC- 1 that will work on my Yaesu 1000D.

My favourite is the one that crossed the channel twice - "boeuf" became
"beef" going one way, then returned as "beefsteak" becoming "biftek."

Cheers,
Fred

One of my wife's oldest friends is a lady who came from Italy at third-
grade age. This lady claims not to speak Italian (though her parents
speak no English, and she visits them frequently). I can't resist playing
tricks on her; I'll start a conversation, and at some point I'll say
something in Italian, she'll answer in perfect Italian without a thought,
and when my wife and I point out that she did so she'll deny it, believing
firmly that she spoke nothing but English.

One question. On a recent trip to Ottawa, I noticed of course the bilingual treatment of most everything. I though "Okay, there you have it". But then one day we made a side trip to Hull, right across the river. The English dissapeared at the border, and French language was the only thing we saw after that. What is with that? Does the bilingual treatment only go one way?

If I lived in an area that the main language was (whatever) you can be darn sure I would learn the language. My kids would know the language too.

His: de él
Hers: de ella

Where it has no gender is in "suyo"or "su" as in "su sombrero" or "el
sombrero suyo."

Very difficult. The US has no official language, by design to protect
freedom of speech.

You're right, of course. I guess it depends when you start counting.
California had of course been invaded... er.. "colonized" by the Spanish
long before the Anglos appeared, thus the Spanish language was by that
time already well entrenched.

It does in Hull. ;-)

I suspect that this is one of those knee-jerk reaction things. Ottawa
being the seat of government of a predominantly English country, in a
heavily English-speaking province, I guess the Hullians (Hullites?
Hullois?) feel they have to make a point.

> If I lived in an area that the main language was (whatever) you can

Yes, but the gender agreement is with the person, not the object.

Actually in that case, the the gender is determined by the object in question, not the person it belongs to: for example "la cartera" (the purse) is "La cartera suya" but it's gender neutral when you say "su cartera"

Both mean "your purse"

Ah, but when us Brits rule the world (again!!) we can teach you all to speak

PROPA INGLISH, LIKE WOT I DOES!!!

Of course you have the Welsh situation here where, for some strange reason,
English people go to Wales on holiday and wonder why the locals are speaking
Welsh (oh yes and when the English go to France on the shopping day trips,
why the French shop assistants are not speaking english.

Still when the revolution comes.... we will all speak..... ENGRISH!!!

Hi, this is true. Maybe the guy is new to this and did not understand.
There are too many guys that are damn nasty about it when they need not
be.

take care

I think the U.S. government advisors in Vietnam in the pre-war days
ran into this problem in trying to communicate technical terms that
didn't exist in the Vietnamese language to their native assistants, so
they got around it by teaching them the English word.
Mike.

This is quite different from the methods that were used to teach English names of objects in certain Native American languages. A number of tribes came up with their own words for the "modern" objects they became familiar with through contact with European settlers. These objects were often described by using agglutinations of already-familiar words and terms in their own languages.

Oftentimes, this would make for a relatively large phrase to signify something that could described in English by using a small word or phrase. For instance, the Ojibwe word for "blueberry pie", which was something that wasn't familar to these folks in pre-European-settlement days, became this:

Miinibaashkiminasiganibiitooyingwesijiganibakwezhigan

Which, when translated from the Ojibwe, means this: berries smashed together between layers of bread.

Please don't ask me to pronounce it. I'll have terrible flashbacks to a couple of exams that I had to complete by giving spoken word translations of several Ojibwe phrases.

When I was living in Taiwan and learning Chinese (Mandarin), I bought some of the local computer magazines and started looking up phrases in the dictionary, but when I used some of these terms in talking to my teacher, she often looked quite puzzled. It turned out that she was accustomed to using the English word (e.g., "printer") instead of the Chinese term (which translates literally as "print form machine").

> culture.

True. Speaking of different cultures...

...what might be interesting (maybe) to some of you, as long as we are on the off-topic but quite engaging subject of languages, is the fact that American Sign Language (which is also used as the primary communication of the Deaf in Canada) and French Sign Language are intimately linked.

The first teachers in 19th century American schools for the Deaf were from France, namely Abbe Charles de l'Eppe and Laurent Clerc. Much of the sign language in the US (and later Canada) that developed amongst the students who were educated in the American schools for the Deaf was a strong amalgam between their own, native sign usage and French Sign Language. Even today, more than 1/3 of the signs and phrases in American Sign Language are direct offshoots of those from French Sign Language.

If a native ASL user were to go to Britain or Australia, they would find themselves lost- since those nations use an entirely different forms of sign language from ASL (actually, Australian SL is related to British SL- which is entirely different and unrelated to American SL).

Hi All;
I thought I listed this the other day?
Maybe someone deleted it, I wonder why, its very useful on the ham bands!
Anyway, its an AST Ascentia 800N 4/50 CS9 model.
I got it with an AOR scanner but have never used it with the AOR & I don't really need it.
I am not a computer head so please excuse my descriptions :D
It has Windows 95 with 4megs Ram, its a DX2 with 50 mhz speed, has a 9.5" dia color screen & a built in trackball, comes with the charger shown.
I only tested it quickly using the paint program shown in the pictures. The keys seem fine & the trackball is great, no need for a mouse.
Also has a modem built in for the WWW & a 3-1/2" floppy , 250+ or so Meg HD, thats wat it shows.
The price is $75.00ppd.
Here are some pics, its in Great shape>>

We do?

I wish someone would tell that to the CRTC! (For you non-Canadians that's the government agency which controls the music our radio stations can play and dictates that if I watch a TV program on a U.S. network which is also on a Canadian one the U.S. one will be replaced with the Canadian one for the duration of the program; so that I cannot be seduced by U.S. advertising.)

Oh yes, and then there is the religious nonsense when something like the memorial service for the victims of the Swissair disaster is ordered not to make any reference to Christ.

But, other than that sort of stuff we can listen to what we want, and if we don't like what we hear a simple call to the CRTC and the offender will be punished - thank God (oops sorry can't use that word) for Short Wave Radio.

Dave

Are you sure? I always thought that the cable companies did
this unilaterally (perhaps receiving payoffs from Canadian
networks).

The 1970s Jap manuals still rule.....

From a Honda motorcycle repair manual:

"You must work diligently to ensure that the gearing assemblies come
together in a harmonious fashion".

Translation: Make sure the gears mesh.

From a TEAC reel-to-reel tape recorder owner's manual:

"Do not attempt to perform a repair function on the subject mechanisms
unless you are technically minded well"

Translation: Don't mess with the innards of this thing unless you know
your s__t.

And just so the Germans don't feel left out....A quote from a beer keg
tap instruction sheet:

"Please make doubly certain that the containing vessel is chilled to a
precision temperature prior to utilizing the tap, and thus we will
have a royal beer!"

Translation (As if one is needed): Make sure your beer is cold!

Actually, we were taught in school here in Southern California that the
treaty which deeded California to the United States stipulated that
California would have two languages, English and Spanish.

Keep in mind that immigrants, particularly women who did not work
outside the home often did not learn English before the advent of radio.
After radio, there was not much excuse!

I don't remember what the signs said when I was in Britain in 1977,
but I do remember my mom doing something really stupid while driving
her rented English Ford, and getting stopped by a cop. The cop pulled
in front of her to get her to stop, and the cop car had a top sign on
the roof which alternately said STOP and HALT in big flashing letters.

He let her off with a warning, BTW.

As far as Vietnam goes, the government had a list, explained in my slang dictionary, of "counter culture" terms that had come into popular usage during the 1960s. Soldiers returning to the US after having been overseas for a tour of duty were having trouble with the language of the country they grew up in because so many new words, or more properly, new meanings for old words had come into being. The army recognized the problem and made up a list for returning servicemen.

Just listen to how people speak, in normal, informal conversation, on old radio programs or movies and compare it to how language is used today. English, at least, is a living and evolving language.

Bill, been there, done that. Worked for 5 1/2 years at Mitsubishi
Consumer Electronics editing user and service manuals from the
"Jenglish" originals to finished English manuals included with the
product. Did same job at JVC from 82-85.

>There are several reasons why the manuals for Japanese and German products are

Bill, that is because, at least with Mitsubishi and JVC the manuals
are written by engineers, NOT by technical writers.

>
>In general, the best way to explain anything is to start with the "general" and

>enhancements from foreigners is an even worse loss of face.

Yes, that was a LONG battle to get the Engineering Group in Japan to
accept the idea that a lowely American could actually produce an
English language manual that was better than what the Japanese could
produce, but once we got that hurdle scaled the other overseas
locations (including Canada) started using our English language
manuals as a base for their manuals.
>
>3. There is such a overwhelming flood of new products that there's no time to do

Ahhhhhh, THANK YOU so very much for vindicating what I told the
Marketing Manager for VCR Products in 1991: THE worst one of the bunch
was the HS-U82 VCR Manual. You could damn build the VCR from the
Instruction Manual!! Hell, the User Manual was bigger than the
Service Manual (which I did). Just for the record, the Marketing Dept.
had those manuals done by an outside MARCOM firm whose name escaped
me.
>

In most cases, yes.

However, to make your mind reel even more, sometimes
the typically "masculine" article "el" is used instead of the more
femenine "la":

Here are two examples: EL agua (the water), EL ala (the wing). To say "la
agua" would be incorrect.

In "grammar" school, (60's) we spent tons of time on grammatical trivia.
"Past-future perfect". "Split infinitives" "subjunctive" None of
which I can remember what they were. Also there were terms
for words what have the ending "ing" tacked on. "I am repairing the
antique radio". And "used to" is a kind of tense of verb IIRC.
Like: "I used to replace tubes before checking anything else".
And we made schematic diagrams of sentences. Say
"I repaired the radio" would look like:

```
I | repaired | radio
--------------------------
\ the
```

At the time I was trying to figure out if I could get a job
diagramming sentences when I was grown up, and who would
pay me to do that......

Though "Give Way" seems a bit less so than "Yield" (perhaps
it's appropriate to use a more polite term there). As for
"Way Out" as opposed to "Exit", maybe it helps avoid the
imperative and be more explantory. Or it's just fun.

Yes, the constitution (although Quebec has not signed it..hmmm...)
provides for protection of a "distinct society" by having, in effect,
positive discrimination in ways. Obviously it's not all that popular
amongst some.

I would love to learn Xhosa, but doubt I can ever get my tongue
around the clicks. I also doubt I'd be bothered to learn to speak
Afrikaans, but I suppose if we were here forever it might be
somewhat practical..

A Lafayette portable AM/FM radio from 1969 had a set of instructions
that actually were quite understandable. " Tuning in an AM or FM
station, always tune the radio to point of maximum output and least
noise." This English only needs a bit of polishing to be good English.
Like "When tuning in an AM or FM station, always tune the radio
to a point of maximum clear sound and the least amount of noise."
...Well, better English.... :-)

I second the suggestion about the Kenwood TM-261A. I own two
of them, and they are excellent performers. They have the best
receiver that I've ever encountered in a broadband-coverage 2m
rig. If you live in an area where intermod from high-powered
pager and commercial FM two-way transmitters is a problem, it
won't be with a '261A. There are cheaper 2m rigs on the market
but you get what you pay for!

Try section 30 of the BROADCASTING DISTRIBUTION REGULATIONS, pretty lengthy legalese specifying: "Programming Service Deletion and Substitution". It doesn't even have to be the same program, just comparable? Section 30.(2)(a)(i).

I would much prefer some requirment to improve the technical quality of the signal, instead of regulating the content I am allowed to see/hear.

Dave

That one's a simple present participle. But there are also gerunds,
i.e., verbs that act like nouns; "Repairing is fun."

> And "used to" is a kind of tense of verb IIRC.
> Like: "I used to replace tubes before checking anything else".

Hm... don't know that one, but it makes sense.

You too? I loved diagramming sentences. I'd look for the longest
hairiest sentences I could find (Hemingway comes to mind) and see if I
could diagram them.

I'm glad I didn't take it up as a career though. I think burnout rate is
pretty high amongst sentence diagrammers. ;-)

Cheers,
Fred

Hi, I have an Astro 150 C Transceiver with a PSU-7 A Power Supply. As far asI have found out delivers 13,6 V from 110 V. Anyone who can confirm this? In the manual they refer to a unit called PSU-5B which operates on 110/220 at 50/60 Hz.

At home we uses 220 V, any suggestions on how to solve this problem? Part from buying a new power supply?

Dag

Good deals abound at the dealers. From the posts I have seen you, the present owners trying to sell their used gear are too much over priced. I have always used the formula of 66% of the retail price is fair for a piece of used equipment, if it is mint and still in production.

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100 watts HF + 6 Meters.
It has a Auto tuner and the MC 100 Desk Mic. In the deal you will get the technical supplement too (AKA Service manual), as well as the owners manual . I also Have the 3 KW Roller Inductor Antenna Tuner. They are in good shape I will trade both for a FT 990 or a FT 1000.. I have been using the FT 920 as a backup rig. Drop me a line so we can work out a deal.
oris@dirtball.com
I have a Icom ICR71A Shortwave receiver that I will trade for a working Viking Valant and SX 300 or Hamuland HQ 110. I'm looking for a good AM Ham station with at least 200 watts out. I hope to find something to work with my Audio rack.
I also have a Henry Amp 2 KD 5 Desktop,(It needs a new Plate amp meter) two 3-500s 100 in will give you 1250 out, New Caps, that I will trade for a Globe King or full legal output Ham band AM transmitter.
this is a pickup trade only. I will be willing to travel 100 miles from Athens GA.
Happy Holidays
73 and thanks for reading

>Part from buying a new power supply?

You have two problems....a transformer will handle the 220 to 110 v no problem (make sure KVA is good enough to handle max power output of PS plus 15% or so)...but in Europe, power is 50hz instead of 60 hz. US. There may be some loading changes, esp. on peak power out. Derate at around 10% and try it.

Could be that's her honest belief.
I was once fluent in Latin, but believed I'd forgotten it long ago. A
few months ago I was reading a book in English when I came upon a Papal
Bull in Latin. My mind shifted gears automatically, read the page of
Latin, then several more pages of English before I realised it! Trouble
is, when I went back to the Bull I could no longer read it even tho I
remembered what it had said! Truly our subconscious minds are wonderful
things!!

Such a congressman would be at a great disadvantage. In the early days of
this country, there was a vote on what was to be the official language.
English won out over German by a hair. There were a lot of German
immigrants then.

>[snip]
>

While people in the US are short sighted in not learning additional
languages, it does not offset the need to speak English for those who have
emigrated to this country. There is a need to interact with the overall
culture. If you look at countries like India or China, each of which has
dozens of languages/dialects, you will find that each established ONE
language in which to conduct all official business rather than trying to
cater to all these different languages. In China, Mandarin was chosen. In
India, they chose English as they could not agree on one of the native
languages. There is a need in a country for a basic language to be used for
communications across the entire country regardless of one's roots.

Depends on what part of the country you are in. Immigrants that choose to move out into the general population don't suffer from these problems. However, human nature is such that immigrants tend to settle in areas with people from the same background for the comfort of a familiar culture and language. But they don't have to. Some immigrants move on by choice and are quite successful when they do so.

I believe that is incorrect. I've read somewhere that in the very early
days of the US, the government voted on whether English or German would be
the official language.

Urban legend. There was some minor discussion due to the German colony in
Pennsylvania at the time,b ut there was never a vote.

I believe Prof. Long can detail this better than I can, however.

Here is some additional information:

"Subject: Return of the US Language UL
Date: 12 Jul 92 16:43:24 GMT

Those of you who have been around here for longer than you care to admit
(like me) may remember the time someone brought up a legend about German
having narrowly missed becoming the official language of the United States.
This is a common story, and the usual cap to it is that Congress voted - by
a majority of one vote - to make English the official language of the US,
this significantly altering the course of development in the US textbook
publishing industry.

The story is false. Matter of fact, the US at present does not have an
"official" language in the sense of a language declared by law to have
special status; English is merely the de facto standard. There _was_ indeed
some discussion about which language to adapt, with some strong separatists
arguing that English was the language of the "enemy". However, there were no
cliff-hangers as suggested by the legend mentioned above; the strong
separatists were a minority group, and it was pretty clear from the start
that most people considered changing from English to be too much trouble.
All this junk was discussed the last time around, but I wanted to summarize
it for those who weren't with us then.

The reason for bringing this up is that I have found an incident that may be
the source of this UL. (Drum roll.) My source is the _Cambridge Encyclopedia
of Language_, by David Crystal, published by the Cambridge University Press,

(c)1987. In the interest of completeness, ISBN 0 521 26438 3.

from page 365:

A planning myth

Probably the best-known myth in the history of language planning is the story that German nearly became the national language of the US in the 18th century, losing to English by only one vote in the legislature (the "Muhlenberg" legend). In fact, all that was involved was a request, made by a group of Virginia Germans, to have certain laws issued in German _as well as_ in Englih. The proposal was rejected by one vote, apparently cast by a German-speaking Lutheran clergyman, Frederick Muhlenberg (1750-1801). But the general status of English as the majority language was never in doubt. (After S.B. Heath and F. Mandabach, 1983.)

[End quote]

Just to show that i did my homework, the paper referred to is: Heath, S.B., and Mandabach, F. 1983. Language status decisions and the law in the United States. In J. Cobarrubias and J.A. Fishman (eds.), _Progress in language planning: international perspectives_ (Berlin: Mouton), 87-105.

It is so ingrained in American folklore, I never gave it much thought
that it wasn't true. It seems nearly everyone knows the story (as far
as missing by one vote in Congress) and believes that we might have
become a German speaking nation. I have even heard of studies trying
to predict what might have become if our common language were German.

Ah well, as Paul Harvey says, Now you know the rest of the story.

I know you can use a SGC coupler/tuner with just about any radio, but can the SGC237 be made to work by using the tune button on the FT-847? Does anyone know why, or why not? What about the FC-20, is it as bad as people say it is, or is it as good as it is supposed to be, just not good enough?

I would like to hear from people who have first hand experience with these products before I buy one or the other.

Well then. You have an opportunity you may not have realized you have -
obviously the replies to this thread shows there might be a market for this
idea as well...

Since you have the skills, and need the money, why not rewrite the manuals
in plain english and SELL them yourself?

I'd pay a few bucks extra for a manual that made sense! I'm actually one of
the few people who has learned the value of taking the time to read one
before playing with something new.

It's a thought... if you don't do it, someone else will I'm sure.

Because the time and effort it takes to do a proper rewrite would never be recouped by the sales.

7021. solid state amp output filter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-18 21:17:06 UTC
From: Ludo <nospam@nospam.com>
Message-ID: <mB5M9.58109$Ti2.8921@afrodite.telenet-ops.be>

Hi,

I recently bought a second hand 1kW solid state amp. The output filters are damaged, the transistors are still ok. First, the idea was to repair the filter, but after inspection, it seemed that it might be better to replace the entire filter-board. It consists of 6 low pass filters , each switched by relays. Any ideas where i can find these filters (rated at 1kW) ?

Best regards,

Ludo

7022. Re: FT-847 Can it work with an SGC 237 coupler/tuner?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-18 21:29:42 UTC
From: "Alan P. Biddle" <APBIDDLE@ATT.NET>
Message-ID: <mln10vgi89k1ojfrc3vs22v4cs187qrb9q@4ax.com>
Source record: 35783

Joe,

I have the FT-847 with FC-20, and also an LDG tuner, similar to the SGC in operation.

The TUNE button is just an input to the FT-847 logic buss. When you press it, the rig CPU does lots of stuff internally, and over the signal connection to the FC-20 tuner to make it do its magic. So to use the TUNE button, you would need to build an interface to connected to the rig which mimicked an FC-20 to the FT-847 CPU. Other than the hardware pin out, Yaesu has not released the protocols. As you can see, not a trivial problem.

Using the FC-20 does have a complication when used with most* FT-847s. The FT-847 has an RS-232 interface which can be used to control the rig. However, the FT-847 uses some of the same hardware for both, apparently, since the FC-20 line is basically a serial port, and if you use the FC-20, it locks up the RS-232 port. This may, or may not, be a problem, depending on how your operate.

*There is a work around for this which works on some systems. It probably depends on the particular firmware revision, but so far a I know, body has figured out the exact relationship.

The LDG and the SGC couplers are wide range matching units, up to 10:1 or so, and can be remote mounted at the antenna, giving you a flat SWR on the coax into the shack. You need to supply some RF for them to work with, either by switching to a mode which generates a carrier such as AM/FM/CW, or whistling into the mic. (horrors!)

The FC-20 is a line leveler, with a range of approximately 3:1 max on the antenna line. It does integrate well with the FT-847, and you can sometimes trick it to match a wider range. Pushing the tune button does it all automagically, no matter what mode you are in, and it can memorize a large number of different frequencies and the matching required.

Opinion mode ON: If you are matching a 10:1 SWR in the shack, you probably need to move the tuner to the antenna, or use a real balanced tuner with balanced line. Especially above 40, you are just heating the coax, or balun. Opinion mode OFF.

Bottom line. The FC-20 works very well indeed, when used as designed. The SGC and LDG are designed for a somewhat different application, and also work very well, though the integration is not seamless.

You should take a look at the unofficial FT-847 forum found at:

http://f16.parsimony.net/forum28107/index.htm

and the excellent FT-847 FAQ found at:

http://www.supercontrol.de/cat/ft847faq/ft847faq.htm

hi all,

i have a 5200 dual band mobile radio that has a "minor" problem.
it works ok exept for when i turn it off. when i press the power on button the radio powers up and the display is fully on and no buttons work and the radio is non functional.if i then disconect the power and reconnect it works ok again untill the power button is pressed off.
has any one else had any problems like this or any sudgestions on a cure or a fix.
many thanks

adrian 2e1bts

I have a Santec ST-144 2 meter HT in excellent condition. It comes with the leather case, but do not have the flap with it and also the desk top drop in charger. It does have the Communications Specialists PL board in it....I do not have the manual and the nicad pack does not hold the charge to long....So I would replace it with a new pack...I will take $50 plus shipping....If interested email or call (508) 821-2993.....WZ1U Steve / Lakeville, Ma.

True, but if you substantially rewrote it, you couldn't be accused of plagiarism.

Now, if you copied the drawings, that would be a different matter...

for sale on eBay # 1946564789

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1946564789

Sinclair Radio Laboratories RES-LOK C4220B Duplexer

High-quality unit in great condition.

Perfect for UHF repeater.

Can be tuned by an experienced ham/engineer,
but I'm not sure if it can be tuned to cover the entire 902-928 ISM band.

From: Beowulf <beowulf@middlearth.net>
Message-ID: <dov20vksvq1klgjc06hq128cvlmskcoivk@4ax.com>
Source record: 35656

I am not a amateur radio operator but I do have a lot of low power devices that I run off of a box full of wall warts.

Anyway, a 40 buck Radio Shack power supply that runs the CB radio and my SW radio went south on me. I was thinking that what I needed was at least one good well regulated well filtered bench supply that could run any one of my devices on it in a pinch and would have a long service life.

I was thinking of getting a Astron VS-20M linear power supply-variable from 2-15 volts with a continuous rating of 16 amps. I know it would be over-kill as far as my power requirements but that wouldn't be all bad either.

What do you think?

Sounds like a nice supply, and one thing you could do is keep it at 13.8 volts, and buy yourself some 78xx regulators for your low power stuff.. mount them to a nice sized aluminum heatsink, and run the works off the supply.. you can buy these for 5, 6, 8 and 9 volts for less than a buck, and they handle about an amp heatsinked.. you can buy or build a nice terminal block to make your connections to.

Since Japanese is difficult to learn to read, most people overestimate the importance of reading in the process of translating Japanese to English. Reading skill sufficient to puzzle out the meaning with a dictionary on your lap suffices. While this isn't exactly easy to learn, it's far short of fluency.

English is taught in Japanese schools and is also widely used in advertising in Japan. English language instruction in Japanese grade schools is not high in quality, but Japanese students still achieve a higher level of capability in English than Americans commonly achieve in their own foreign language studies. The Japanese are well aware of this.

I think these facts have a tendency to cause some Japanese to overestimate their prowess at translation. If you're a Japanese engineer with the best English skills in your department, the boss may mistakenly think he can save money by having you translate things. It is very un-Japanese to consciously do shoddy work, but without critical feedback how would you know? Feedback from the USA doesn't count: many Japanese think Americans are self-centered crybabies (with some justification).

Literal translation is problematic anyway: Japanese has a wildly different grammar from English. Japanese verb tenses don't map well to English tenses. Adjectives have tenses. A verb relates three nouns to each other, not two. Word order is completely different. The result is that a Japanese writer will build up to a concept from a very different path than an English writer will.

Engineering and science are especially difficult, as the languages often use different metaphors. A Japanese translator might know to use the English word for a collection of cannon in place of "denchi" (literally "lightning pond"): after all, "batteri" is also a modern Japanese word. On the other hand, I never got a satisfactory translation of "yomikomi" until I figured it out myself: my Kodansha dictionary translates "yomi" as "judgment" and "komi" as "included". I had to look hard at context and go back to the roots "yo(mu)" (read) and "ko(mu)" (load) to get "operand fetch"! You have to *really* understand the subject matter to do a decent job of translation.

Inductors can be made with silver plated wire - Scientific Wire Co
or Hobbycraft. Capacitors from the usual suspects. High voltage
relays are harder to source, can you re-use what you already have
or find them from the original source?

It has to be a "high tech" language? It's not enough to be able to
communicate with your neighbors or understand what you hear on the radio?
I certainly would find Spanish useful sometimes, but I don't know it.

I have found French quite useful professionally. I think most US schools
still teach that. My town's public school system certainly does.

I have the mobile model by the same company.

Sounds like your amplifier has seen a high VSWR and smoked some of the
capacitors.

These are high voltage ceramics and are easily replaced.

I do not have a schematic of your amplifier but I imagine the chebychev
filter network is very similar to my amp.

Let me know if I can be of further help.

Source record: 35664

I picked up a used IC 746 recently and am very impressed with it. I
also have a Kenwood TS 850 and Yaesu FT 1000MP in the shack. The basic
receive performance of the IC 746 compares favorably. If you don not plan on
working satellites or need UHF then the IC 746 is the way to go - better
receiver, no constant fan noise, easier to use - I like the band buttons and
big tuning knob, internal antenna tuner, and 100 watts on two meters. ---

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100
watts HF + 6 Meters.
It has a Auto tuner and the MC 100 Desk Mic. In the deal you will get
the technical supplement too (AKA Service manual), as well as the owners
manual . I also Have the 3 KW Roller Inductor Antenna Tuner. They are in
good shape I will trade both for a FT 990 or a FT 1000.. I have been
using the FT 920 as a backup rig. Drop me a line so we can work out a deal.
oris@dirtball.com
I have a Icom ICR71A Shortwave receiver that I will trade for a working
Viking Valant and SX 300 or Hamuland HQ 110. I'm looking for a good AM
Han station
with at least 200 watts out. I hope to find something to work with my
Audio rack.
I also have a Henry Amp 2 KD 5 Desktop,(It needs a new Plate amp meter)
two 3-500s 100 in will give you 1250 out, New Caps, that I will trade
for a Globe King or full legal output Ham band AM transmitter. this is a
pickup trade only. I will be willing to travel 100 miles from Athens
GA.
Happy Holidays
73 and thanks for reading

Okay, which language do you learn when you already know English?
There is no obvious choice unlike in Japan or China or Europe or
elsewhere (English). They tried to teach me Spanish in high school.
Waste of time; Spanish is not a high tech language. They didn't
offer Japanese or Chinese, which might have been more useful.

Your suggestion is intriguing. It's been over 30 years since I have
built anything-Heathkit tube stuff. So I looked up the pin out of the
78xx regulators.

They have three pins-ground, in and out. Are you saying that all I
would have to do, electrically, is to feed in 13.8 volts dc from the
PS into the In and Ground pin and I would get, say, 6 volts dc out of
a 7806 from ground and the out pin without any additional components
or wiring? If it's that simple I will definitely give it a try.

Thanks for you response,
Beowulf

The most you would need to add would be a small capacitor (10 F) across the output of each regulator.

I'm sorry you find my posting of a useful piece of radio equipment to
ham equipment and swap newsgroups to be crap. At your warm and
friendly suggestion I have looked up the meaning of FA and will use it
in future postings of this nature. If I may offer some unsolicited
advice, I think you'll find that people respond better to help and
guidance than judgement and negativity. This has worked for me for
many years in many different types of discussion forums, on usenet and
bulletin board systems, since before the web.
Best,
Nicholas

Regardless who does the translating, it just seems stupid
that the manufacturer doesn't test the manual out on a
sample of people from the target audience. Why is it so
hard for many firms to understand this? It's probably also
not a good idea to have engineers write the (users) manual
either (I know, this last remark is flame bait).

>Actually the core material is burned, the capacitors seem to be ok.

SMOKING

I've just checked my 'Metron' amp manual and the part numbers or
description of the filter inductors do not in any way tell you what
brand or type of ferrite core is used.

IMHO Type 43 offers the best overall performance from 160-10m.

However I've just found the business card from my last point of contact
at Datron who it seems are now part of Titan Systems Corp.

You may wish to contact David Bradley who's e-mail is;

dbradley@titan.com

You'll receive my consultancy invoice at the end of the month:-)

Happy Christmas.

Because it costs time and money. When I worked full-time at The Evil Empire, we user-tested the QuickBasic 4.0 docs. It was a botch, because we had a bad sample group ("professional" software testers interested mostly in getting free samples), and no one wanted to commit the project to the extended testing that would have been needed to really learn something.

I might add that a good, experienced technical writer can "get it right" (most of the time) without testing the docs on a live audience. Honest.

> It's probably also not a good idea to have engineers write
> the (user's) manual either (I know, this last remark is flame bait).

Most "professional" technical writers are incompetent; I'm sure there are engineers who could do a better job.

The problem with having the engineers write the documents is that they are "too close" to the product and don't (usually) know how to look at it from the users' point of view.

Except for the fact that the meters are reversed, and there is
no Reflection Coefficient scale, I believe the Autek Research
WM1 Deluxe Computing SWR/Wattmeter would fit your bill. I have
one and like it, and an added bonus is that it can read Avg Pwr
or PEP:

I agree with this. It also seems to me that writing is not necessarily
their forte -- though this varies from individual to individual.

Hold it! Hold it! Hold it!

There is no assurance that the reflected WAVE is 180 degrees out of phase!! A low impedance, relative to Zo, produces a negative phase shift in the reflected voltage wave and NO phase shift in the reflected current wave. A high impedance, relative to Zo, produce a negative phase shift in the current wave. The magnitude of the phase shift depends upon the complex impedance of the load.

A reflection coefficient is a complex value and can have any phase relationship depending on the resistance and reactance in the load. A Smith chart shows all possible reflection coefficients.

The reflected current and voltage can have any load factor, cosine theta, between zero and one. So, the reflected WAVES can have any power factor and must be treated as both POWER and Reactive Volt*Amperes [VARS].

7091. Fix for IFR FM/AM1000 CRT Display?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-20 19:39:50 UTC
From: mike <spamme0@juno.com>
Message-ID: <3E037206.CA28A464@juno.com>
Source record: 35702

I have a very early IFR FM/AM1000 Service monitor.
The CRT monitor was dead. I replaced the diodes
in the
filament supply of the CRT and that fixed it.
Put it on the shelf for six months and now the CRT
is dead again.

IFR did a mod to run the filament from AC.
Removed the diodes, but
requires a new transformer that I don't have. The
start circuit for
the CRT power supply is very flakey.

Anybody successfully redesigned the CRT supply to
work reliably
and willing to share?

Thanks, mike

could send you the schematic for NYE VIKING power meter (believe it is
part of a tuner), it uses 5 op-amps (an LM324 and an LM358) - it is
not too expensive to make, don't know about the accuracy, but the

problem is to find a frequency independent probe which works - to many amateur constructions aren't too easy to copy with the promissed performance.

Contrary to Lou's rants, it behooves anybody in the US to pick up on a
bit of Spanish if you want to get your order right if that has become
the norm in your community.
My OM, 74 this year, can do it (since his $150k Charlotte neighborhood
has gone almost totally Hispanic). And he loves the fun (and irony) in
it as do the people he now has to deal with.
Its all smiles and broken jokes...while the next guy just goes on an
angry rant and will probably get cheated on his change.
Those who categorically refuse to play the game might as well be left
behind...as they rightly should be...and will be.
There's no We vs. Them battle that needs to be fought. I'd rather hear
a Spanish accent at McDonalds than some marble-mouthed suburban Anglo
kid who I have paid for his education.

These are the same folks who go to a non-English speaking country and
think that if they YELL loudly enough at the natives, they will
somehow understand the English.

You got it right! They came here to WORK and get ahead - just like my ancestors did. There are ins and outs as to HOW we ought to manage the situation, but I'll never fault someone who is here looking to get ahead in a legal fashion. I try to treat people with respect and almost invariably get the same in return. I'd bet I am a good deal more difficult for them to put up with than vice versa.

Besides, Spanish is a very easy language to learn, very easy. It's logical, easy to pronounce, and very easy to read and write. I've learned four languages beyond English, and Spanish was the easiest of the four to learn, by far. If you start to study Spanish, you realize how much Latin grammar has found its way into English. Spanish was also influenced by the Greeks (and English has quite a bit of Greek in it, too).

Jackie

Talented people usually know how it works but can't seem to get it across to people who would little care. If YOU know how it works, it's just a matter of deciphering the usage of all the doohickey buttons on it, 65% of which are probably generic concepts. Push 'em till you figure it out!

Steven, not on all 39000 posts yet...(it's 4:20 am, give me a break)

This Triband HT has extremely minor use.. less than an hour, I would say. No scratches or marks. I still have the warranty card.

Take a look... Reserve is only 180 so.... a very good deal

Especially the English in boarding schools...

English and Spanish have basically the same sentence structure, but Spanish (like all Romance languages) is more highly inflected than English. Learning how to decline verbs is a real pain in the toches.

Nope. In both continents there is only one nation that uses America in it's
name and only one country whose denizens call themselves Americans. You
will never find a Mexican who says he is "American". Ditto Canadians.

You have confused continent names with nations names

Steve

In Japanese, the usage closely follows American English usage: "Amerika" means USA unless qualified by "north", "south", or "latin".

I vaguely recall that the formal name of Brasil includes the
Portuguese equivalent of "United States" as well.

But in common usage, "American" is understood to mean relating to the
United States of America.

We were using the current name before Mexico and Brasil decolonized.

Happy trails,
Gary (net.yogi.bear)

It may be a waste of time and trivial from your perspective Steve, but when someone is plowing thru possibly a couple hundred posts it make sense to filter out the stuff you have no interest in.

It takes NO effort to identify the post as FA, FS, FT, WTB, etc. as most of us do. Failure to do so amounts to a troll.

And further more...Rock on yerself!

Current market price is about $700 for "mint" unit.
New, they were about $1500.

I think the country is just called "Estados Unidos de Mexico" (Mexican United States). The Mexican provinces are also called states, just like here.

"Estados Unidos Mexicanos"- "United States of Mexico".

Mexico has states too, just the like USA does.

Jackie

Rrrrrp. Wrong.

The name of Mexico is Los Estados Unidos Mexicanos. The United Mexican States.

Brazil is Estados Unidos do Brasil. The United States of Brazil.

"America" is not in the name of any other country in the Western Hemispnhere except for the USA.

All Latinos in the Hemisphere, however, consider themselves "of the Americas" or American. South Americans are "Sudamericanos" and Central Americans are "Centroamericanos." The group of Latin American nations are members of the Organization of American States, or the "OAS" (Organizaci&#65533;n de Estados Americanos."

In English, in North America, maybe. Elsewhere, and in any other language,
would require specification of origin.

I posted ONE SHORT message on a public forum. Look at all the bandwidth and work you guys took telling me to do something that you did not even explain. (Don't bother, I understand.. Some of you guys have too much time on your hands.)

I have never even heard of a group that was so overworked that it needed "codes" so you could filter your mail better. Maybe you concerned folks should start a FS newsgroup and a FA newsgroup so you would not have to exercise your mail filters too much! :)

Actually, I appreciate the extra publicity you gave my small "plug".

7173. Converting Amplifier to 6M use

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-22 04:22:09 UTC
From: Keith Beckmann <Kbeckmann.spankme@wi.rr.com>
Message-ID: <R5bN9.12423$Zt4.145868@twister.rdc-kc.rr.com>
Source record: 35834
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I've got an old amplifier that I'd like to convert to 6 Meter use.

It's a sweep tube amp, with 3-6KD6's, in a grounded grid arrangement, with an untuned input (.01 disc into Cathode, and an RF choke to ground) and a PI network for output. The PI output circuit currently has about a 30pf variable for tune, 6 turns #14 @ 1", and what looks like a 140pf variable for load.

I cut the coil in half, and pumped 10 watts @ 50 MHz into it, but only got 10 watts output into my dummy load.

What am I doing wrong, besides trying to make a silk purse out of a sows ear?

If you look at a reliable reference,s uch as the CIA guidebook, you see that
the usage in English and Spanish is:

conventional long form: United Mexican States
conventional short form: Mexico
local short form: Mexico
local long form: Estados Unidos Mexicanos

The term, "Republica Mexicana" is used in official documents as the legal
name for the Estados Unidos Mexicanos together as a collective body.

Ever notice that many of the old communist dictatorships had long names
like
"Democratic Republic of Korea" "Democratic People's Republic of
East Germany" or such. And then compare that to a country that really
has democracy "United States of America".

Where did the name "America" come from anyway? Heard some
urban legend that "America" was the name of some mapmaker the
king of Spain's staff hired to compile the discoveries of the New World
into a map. He drew the map, and signed it with his name at the
bottom. The King said something like "Oh, we're going to call the
new world 'America'. Okay." when he saw the name on the
bottom. So the most feared and dreaded nation of the world
today is named after some guy who drew a map.... :-)

"Interesting. Somehow, I suspect though that cable companies petitioned for the adoption of this regulation to the CRTC."

I can't think of a reason why cable companies would *want* to go to the trouble. In any case, simultaneous substitution is easier than the previous CRTC requirement that all commercials in *any* program on a U.S. station be deleted and replaced by public service announcements (so that, for example, GM of Canada would not benefit from Canadian cable viewers seeing U.S. commercials for GM cars, and therefore would be likely to spend more money on TV advertising in Canada).

"I expect they don't have Pizza Hut or Radio Shack, and McDonald's is just a name so not really English."

At one point there was a big stink over the Eaton's department store chain; the Quebec authorities demanded that they remove the apostrophe from their signs, since the mark is used in English but not in French. (When I looked a few months ago, Eatons no longer uses the apostrophe...but no longer has stores in Quebec.) McDonald's apparently was exempt because it was a foreign company that was just using its own name.

Amerigo Vespucci made some of the first maps of the New World.
Remember, Columbus thought he was in or near India.

We could easily be in the United States of Vespucci.

Made in Europe, sometimes means one of the former Sovjet states, another country in the Eastern part of Europe or maybe Turkey. It does not imply the equipment was made in a country in the European Community. This, of course, is a new development not seen 10 years ago.

Actually, Vespucci's claim to fame was that he was the first explorer to recognize that the new lands found were not Asia, as Columbus and others had believed. About the same time his friend Columbus was sailing around, Vespucci was exploring and mapping for the first time the Northern and Eastern coasts of South America.
His mapmaker friend Martin Waldseemuller is credited with 'inventing' the name which he did to honor the explorer. Waldseemuller's name only referred to South America at the time but the name caught on to describe all of the New World.

It's hard to draw any conclusion based on the limited info you gave.

You will probably need to use a matching circuit between the exciter and the input to the amp to get proper drive to the amp.

You did not mention anything about the plate current or being able to find a resonance with the 30 pF tuning cap. Even with low drive into the input, you should be able to tell if the output network is in the ballpark.

You might also want to check the specs for the 6KD6 tubes and see how close you are to their upper operating limits. If their unity gain occurs at too low a frequency, you will get undesirable results regardless of the other conditions.

Keith,

The 6KD6 has an output capacitance of 16 PF. So you have 48 PF in parallel with the output tuning capacitor. The output pi network is going to be very high Q. You will need an inductor of about 0.2 uH. To get any efficiency at all, this should be made of very thick wire, like #8, or 1/4 inch copper tubing. Without test eq it going to take trial and error to get resonance. Try it at 50.0 and 54.0 MHz to get a feel as to whether the frequency is too low or too high. My guess is you are going to end up with an inductor that has 1 or 2 turns. You can change the inductance somewhat by stretching/compressing the length of the inductor. If you have a bandswitch, get rid of it.

Starting with what you have now, try it with 1 or 2 tubes plugged in. See if it will resonate that way. Every time you add a tube, you add 16 PF.

The input RF choke need to be changed to somewhere around 1 - 5 uH. Or, put some kind of tuning in there. See what people have used by looking an an ARRL handbook.

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100 watts HF + 6 Meters. It has a Auto tuner and the MC 100 Desk Mic. In the deal you will get the technical supplement too (AKA Service manual), as well as the owners manual. I also Have the 3 kW Roller Inductor Antenna Tuner. They are in good shape I will trade both for a FT 990 or a FT 1000. I have been using the FT 920 as a backup rig. Drop me a line so we can work out a deal.
oris@dirtball.com
I have a Icom ICR71A Shortwave receiver that I will trade for a working DX 100 and SX 300 or Hamuland HQ 110. I'm looking for a good AM Ham station. I will trade this Receiver for a good working AM station. I want both transmitter and receiver. I want the transmitter to have at least 100 watts out. I hope to find something to work with my Audio rack. I also have a Henry Amp 2 KD 5 Desktop, (It needs a new Plate amp meter) two 3-500s 100 in will give you 1250 out, New Caps, that I will trade for a Globe King or full legal output Ham band AM transmitter. this is a pickup trade only. I will be willing to travel 100 miles from Athens GA. I also have a Hallicrafters S 38 C Shortwave receiver. Its in great shape. It works but I have no idea what its worth. It is a old old receiver. (Make Offer) I have a MFJ Versa Tuner II and a Roadtalker 40-channel sideband CB radio that somebody converted to 10 meters. It works quite well. I talked to a guy in South America on it. (Make Offer) I also have a CBS 1000 transceiver. 25 MHz to 29.795 MHz. In 10 kHz steps. I got it at a hamfest in Georgia. I'll trade it for a SX 300 or NC 300 HQ 110 HQ 170 HQ 200 or similar HF receiver.
Happy Holidays

Keith,

Here is something else you can try. Right now you have the plates of the 3 tubes in parallel, with a wire going to the pi network input. Replace the wire with a .1 uH inductor to tune out some of the capacitance. That would be 2 - 3 turns of #12 wire wound at 8 turns/inch, 1/2 inch inside diameter. This is what is done with tuned transistor amplifiers, where you have even more capacitance.

I presume you don't want to do this, but the whole other way is to change the pi network to a series tuned circuit with link coupling.

BTW, I have built four 6 meter amplifiers, 2 tube and 2 transistor.

In Spanish, it should be called "Estados Unidos de Norteam&#65533;rica." But no one
gets upset over it.
>
> The translation would more-correctly be "The United Mexican States of
America."

No, it wouldn't. The translation is "United Mexican States." "America"
appears nowhere. Nor is it ever used in conjunction withthe name.

And Mexicans in proper discourse refer to "Americans" as "norteamericanos"
or "North Americans" since in Spanish an American is anyone form North,
Central or South America.

However, more and more people in Latin America now refer to those form the
USA as, simply, "americanos." It depends on the context. In fact, famous
singer Piero form Argentina did a parody of tourists from the US in 1969 and
called it, "Los americanos."

I was looking in some older ARRL books, and noticed that almost all of them use some sort of matching for the input, but many manufactures simply use an untuned coupler.

The tune capacitor is fully disengaged at full output. I didn't measure the plate current, but I will.

I tried 3 turns of #8 (all I had was stranded wire), and this worked slightly better, but still not right. The 30pf tuning capacitor is fully disengaged at full output.

> Without test eq it going to take trial and error to get resonance.

I have a signal generator to send a signal thru the Pi network, and a commercial spectrum analyzer to view it's output, but I don't know how to use it in this application. How do I account for the input and output loads?

I've also got an oscilliscope, plus a grid dip meter

This was a mono-band amp, so there was no band switch.

> Starting with what you have now, try it with 1 or 2 tubes plugged in. See
if

That's an excelent idea, thanks.

> The input RF choke need to be changed to somewhere around 1 - 5 uH. Or,
put
> some kind of tuning in there.

I did change the RF choke to a smaller one. I don't know the it's value, as it's a junkbox RFC. It's about 10 turns wrapped around a core the size of a 1/2 watt resistor. Is there an EZ way to figure out an RF chokes value?

> See what people have used by looking an an ARRL handbook.

I was looking at the ARRL handbook (I've got 1967, 1969, 1978, 2001), but most of the tuned input stages are for biased tubes, where they are inputing the signal in the screen. I kinda wanted to leave it as grounded grid for it's stability

I thank you for your response, you given me some excellent ideas.

Amerigo Vespucci
1454-1512

Explorer

Italy: Florence
Iberia

Raised and educated in Florence, Amerigo (also Americus) Vespucci was a merchant and navigator who sailed to the new world on two (perhaps even three) occasions, sailing for Spain and for Portugal. He made his most significant scientific contribution to the Age of Discovery when, through astronomical observations off the coast of South America, he confirmed that the lands Columbus had encountered were not Asia but were in fact an entirely separate continent. The letters he wrote describing his travels were published and widely distributed in Europe.

Vespucci owes the use of his name for two continents to the German clergyman and scholar Martin Waldseem&#65533;ller, who had read of Amerigo's travels and chose to call the new lands "America" in his honor when printing a wood-block map.

Well, if our politicians keep kissing their butts, in another generation, it will be The United Mexican States of America or is it "Mexico"? They'll have enough voting power to change the name too.

We cater to them more than anyone else coming into this country and a majority of our downfall from drugs comes right from there, or through there.

If THEY don't like US referring to ourselves as the UNITED STATES OF AMERICA, then why the hell don't they stay where they belong. No one asked most of them to come here. I live in a very quiet respectable neighborhood. WE recently had 10 of them who were imported here for "slave" labor you may as well say.. A landscaper bought a house here in town without telling anyone his plans, to put them in rent free while they worked for him on a work visa. They weren't here 2 months and a stabbing took place as a result of them. Our people were up in arms of them being here to start with and that incident only served to underline their concerns. They are "reportedly" coming back in spring. Our zoning doesn't stop it from happening. I can only imagine what this next round will be like. Between them and one family - recently evicted, our crime rate rose 75% in one year..... They are gone and our town is back to normal.... Speaks for itself. I'm not saying they are all bad.... But I sure don't like the precedent I'm seeing played out.

The 6KD6 was designed for old TV sweep amplifiers, which operated at about
15Khz.

Anybody know anything about the Aircastle 16F1H receiver? I just picked one up in a thrift store. Looks like it is from the 1960s. The rabbit ears are snapped off, and the pots need a good shot of something to clean them up. Unsure whether I should try to restore it to like new condition, or to just get it functional for mine own needs. I've been wanting a portable SW receiver, and this may do the trick.

I have heard that many products (particularly clothing) labeled "Made in the USA" are in fact made on some Pacific island (Saipan, perhaps others too) that is controlled by the USA -- and made by workers who are imported from Mainland China and kept in horrible conditions with few of the rights that inhabitants of the 50 States enjoy.

More than half the prescription drugs sold in the Continental US, and
labeled "Made in the USA" are manufactured in Puerto Rico.

Hi John,
No.. I really do not understand. Seems reasonable to me (as one who is not familiar with the culture of this NG) that if you were interested in "recreational radio swapping" you might well be interested in both equipment for sale HERE and ELSEWHERE. Now that you call my attention to it, I see some folks are using FA and FS prefixes and I see nothing wrong with this. In fact, I did notice the FS on some entries and put it on my listing which happened to be offered on eBay.

As a result of posting my message, I received one really nasty message from one individual who did not know how to express himself without cursing. Another fine fellow from this NG (you know who you are) came over to eBay and put in a ficticious bid on my equipment for sale. Here I am, trying to help the widow of a fellow ham dispose of his equipment and I am met with hostility and uncivil behaviour by SOME FELLOW HAMS! I am sure that MOST of the follows on this NG are people of good will. But some of you need to consider that a) some folks like me who do not use this NG daily may not be aware of your FA/FS "rule" and b) even if we don't know, we deserve a civil behaviour from our fellows.

I have been a ham for almost 50 years. I have found HAMS to be about the most honest and most civil and most friendly group of people there are. I brag to others about how tolerent and easy going we are to each other regardless of WHO the other HAM is. I think a few folks on this NG need to rethink their approach to helping newcomers to the NG without being the bearers of hostility and ill will.

Then there's the "Assembled in ..." scam. Most recently, I got some
generic CD-R's that say on the liner "Assembled in Canada." Like, what's
there to "assemble"? A machine that sticks the liner and the CD into the
jewel case?

Cheers,
Fred

Keith,

Your new RF choke seems about right. Use the grid dip oscillator to find resonance when the capacitor is fully open. From what you say, your coil is still too big. Don't worry too much about loading at this point, but set the loading cap to different values when you check for resonance. What band did it used to cover?

If this was an 80 or 40 meter amp, it just may not work at 6.

Tam/WB2TT

Ultimately, this is the ONLY rational course of action on ANY news group
when you run across a topic you don't agree with.

Trying to control the postings in a news groups is like trying to teach
a pig
to sing. You only waste your time and annoy the pig.

Hi,

I hope I am posting this correctly, and to the correct newsgroup. I am new to newsgroups and using them. However, I could use some help with a radio I am trying to get working.

I have inherited a used Kenwood TH-79A and have downloaded the manual from Kenwood's web site. but for the life of me, I cannot get it to work with a friend's repeater.

His repeater is at 427.620 and has a tone of 127.3 for the input only. The transmit shift is down 5 MHz.

I have tried several times to program this. I put in 427.620, minus shift, and tone=127.3 and when I key the mike, speak, and release, it powers up the repeater (it shows on the level display on the HT) but I hear nothing. The static goes very low for a few seconds and then comes back up with the level display drops.

My friend says he can hear my voice when I transmit, but I hear nothing after I release the PTT button. My friend says I need to turn decode off for receive, but I can't figure out how to.

I've also tried programming it with split frequencies, i.e. receive on 422.620 with no tone and transmit on 427.620 with tone on. This displays a funny +/- on the display and doesn't seem to work either.

I would appreciate any help anyone can provide on this. The manual is no help. Any web pages giving hints or someone who knows what to do in this instance would earn my utmost admiration!

Also, I would appreciate a direct email response also as I am not sure I can find this site again very easily!

thanks in advance,

Don E.

Jeff,

Already went googling last night and found the reference you mention. That's why I approached the list as a last resort. I was *hoping* someone would know a little more background on this unit and maybe even have a manual they could copy for me. :-)

As to the Columbia River gorge, it's incredibally beautiful in the spring and summer, but right now it's a cold, foggy, rainy, windy, muddy mess. Who can deny the beauty of the Multnomah Falls, though? It's just a 15 minute drive from my house. Great place to live and raise kids.

Rob

Pull out the sweep tubes...if good sell them to some CB goof.
Replace with 6146B tubes. Build a regulated screen supply. The 6146B will handle a thousand if necessary, but is happier with about 850 max un loaded. The screen is happy about 200 or so for AB1/2. Check old ARRL handbook for specs on various modes.

Works fine on six. At least the one I built did.

You will need to replace the RFC's in there with Ohmite Z-50 or equivilant.

Dan/W4NTI

I'll tell you what, LOU, when you find people already here in this country who will DO the kind of work they do, show up every day, not scurry off after the paycheck is passed out on Friday and then not show back up when they've blown the cash (usually by Tuesday or Wednesday) with a lame excuse, who will work without an incessant litany of complaints as to how they are treated and not getting any respect; you let us know! You do that; okay, LOU?

This was a *cough* 10M amp.

I tried using a single tube, and got almost no output.

Does anyone know if the 6KD6 will even work at 50 MHz?

Keith

7254. Icom IC-207H starts transmitting on it's own

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-23 03:13:09 UTC
From: frerichs@ro-dot-.com
Message-ID: <3e076e30.96995491@news.hiwaay.net>
Source record: 35565

I have a Icom IC-207H mounted in a 2001 Dodge truck using the remote control head mounted on the lower dash panel with the radio mounted under the front seat. The antenna is mounted on the roof. The VSWR is 1.2:1 or less. The radio power is wired to the Ignition key accessory position so that the radio comes on when the truck ignition is on. I have found that if it is below 20 F over night I have about a one in twenty chance that the radio will go into a random transmit mode on itï¿½s own. It will transmit for a few seconds then quit then transmit for a few seconds. It will repeat this cycle with somewhat random timing until you either key the mic, push the power button on the control head or turn the ignition off. I have caught the radio doing this three times so far. I am not sure how many times it has done this before I started to keep a careful watch. There is no clicks, no noise or other indication other than the tiny icon on the radio display that the radio is transmitting. The first time I thought that it was the PTT switch sticking and I added a extra leaf spring to the wimpy factory original and bent the spring tab so it would be farther away from the PTT switch plunger when it was not pressed. This did not fix the problem. When it goes into this random transmit mode the tiny TX icon on the control panel blinks apparently in sync with RF power out according to a field strength monitor I have Velcroed on the dash. I have programmed the TX time out timer internal to the radio to the shortest setting which is three minutes. One day the battery in the field strength meter died and the radio apparently went into the strange transmit mode and TX internal timer timed out and started beeping. This tells me that the internal control microprocessor is at least partly working because the display is working and the timer is working. According to the $44 Icon service manual the PTT switch input goes directly to an input port on the microprocessor.
Apparently there is also some one else on the local repeater that also has a radio that also does the same thing or at least it sounds like the same thing. All this random transmitting tends to raise the blood pressure of several of the repeaterï¿½s members.
I have called and Emailed Icom about the problem. They are clueless so I donï¿½t think I will get any help there.

I have found that in high volume production of electronics if there is a problem it reoccurs several times.
Has anyone ever seen this problem and if so what was done to fix it?

Indeed!

I would never buy from someone who claims they are selling
something (implies "This is the price, you want it?") and then
says "Oh, sorry, you can't have it for THAT price. It is really
on auction, not on sale."

So ... another seller I will avoid.

I have a Hustler 4BTV with new 40M top hat, new 10M trap and instructions. It works good.
The tip of one of the 4 top hat elements is bent,,, not a significant effect.
I am in Rochester, NY 14526

Lou,
I hope the authorities took care of this "landscaper". The penalties to
the sponsors of immigration fraud can be very severe.
It sounds as if your community might have a problem policing its own.
The precedent you are seeing is not based on language or national
origin...its based on your local huckster who is probably skirting a
dozen INS regulations and scraping the bottom of the illegal wetback
market who would be prey to his scheme.
So before you jack yourself off with another one of your anti-Hispanic
rants you might want to consider what you Lou can do to make the
inevitable immigration consequences more palatable in your community.
Save your ire for the pig-dogs that killed 4000 Americans last year, not
for people who simply come to the US as a matter of economic survival.

No Hank,
It is YOUR problem too. A NG is a public forum and it <should> welcome
newcomers instead of greeting them with harassment and ill will. That
is what (for me) Ham Radio is all about.

Maybe times have changed.. If so, not for the better.

First of all, if you want to label me a bigot because I CARE about what happens in this country and to OUR citizens, then I wear the badge proudly.... But I DO detest how this country is being torn down and handed to others on a silver platter. As to the INS, it has been proven with 9/11, that they aren't worth the paper the name is written on. Our Borough officials did call the local office. They said unless a "crime" was committed, there was nothing they could do... Some help! The landscaper is still doing his thing. Our community does NOT have a problem policing it's own... WE did go round and round, we got no back up form those who should have provided it.

As for the "pig dogs" they should not be put in prison being fed by our tax dollars and getting better benefits than alot of our own citizens .. Their predecessors who tried to level the WTC the first time around are still there. NO, ALL of them should be SHOT. They didn't spare any lives, neither should we.

THAT is a part of the problem, we cater too much..... THAT is my beef..

Apparently a couple of you may have missed an earlier point. I SAID...this
is AMERICA. WE speak ENGLISH. Yet when you go into most Social Service
Agencies, they have signs up with SPANISH and ENGLISH. We also have Chinese,
Japanese, Vietnamese and so on living here. NO where in those places have I
seen any signs in THEIR language. IF I were them, I would be pissed. Do they
not use those services? Do they not deserve signs too? WHY do we cater only
to one group??????? WE supposedly pride ourselves on being fair and equal...
OK? Where are the signs in the places meant to "serve"????? IF those other
groups have to learn to read and speak English - rough as it may be to them
or coming from them to survive here, why can't the rest???? I'm only asking
how come we don't treat the other groups as fairly? HOW IS THAT BIGOTED?????

Oregon has NINE official languages which appear to rotate amongst twelve depending on the most prevalent foreign culture in the state. I treasure all facets of humanity that are pathetically catagorized by race, ethnic origin, sex and sexual orientation. The fact that he or she babbles differently or eats strange food or even feels affection for the same gender (or both) is inconsequential and a CRAP argument. God doesn't make mistakes, and everything is made by and is of God. That will be enough. You can't beat this dead horse any further! As they say in pubs, "Gentlemen (ladies too) the hour is nigh!"

Lou,
Its bigoted because you come up out of the clear blue to rant about
those terrible Mexicans and people who speak Spanish in general as if
there mere presence is an affront to you....cross-posting across five
radio oriented groups, no less. And this isn't the first time.
The USA is now about 15% Hispanic and it makes sense for everything from
Government to advertisers to not totally ignore this market. No other
foreign language group is as large or as widespread as the Hispanic
population....if it were, there would be signs in their language too.
This doesn't take anything away from your life, Lou.
As for learning the language, obviously you didn't read my post to your
last rant a couple weeks ago.
As a society we will be much further ahead if we try to get along and
work to improve things under changing circumstances. That doesn't mean
'catering' but it also doesn't mean treating people like assholes just
because they happen to come from Pittsburgh, Miami or Monterrey.
And if your local landscaper is indeed playing immigration tricks, go
directly to the INS instead of your local Barneys to report the fraud.
Peace, bro.

They barely work at "27Mhz", almost unstable. 50Mhz is nearly twice as high, I would not think that the tube would make much of any useful power output, very inefficent, probley less than 30%.

Hank,

I took a look at your web site. I like the 1954 station better than the
2002 version. Where are all of the knobs???

I remember sweep tube CW transmitter finals in the late 50s but I do not
remember any sweep tube linears. I do remember multiple tube 6AG7, 1625,
807 and 6L6 linears from that era though.

Hi All,

Does anyone know the history of the Instructograph Company itself, or know of a web site that discusses this subject? There is a certain amount of info on the code machines themselves, but very little on the individuals who ran the company, or
how they manufactured the Instructographs, etc. Any help would be most appreciated.

Thank you,

Mike

Hey Lou,
Perhaps you should read a few books about the history of the American continent. Spanish was much more widely spoken than English in many parts of the present USA. Where to you think the word "AMERICAN" originates from? An Italian. Come on, there's room enough for everybody on this planet.
Regards,

I have picked up a Ray Jeff 678 handheld marine VHF. It has a blown final, it was already removed from the unit. It seems it was hybrid module. Does anyone have any info on that final module, or on the radio itself.

Thanks, Peter

Check google.com -- several articles there http://www.google.com/

Example:
Both the Omnigraph and the Natrometer were predecessors of the
Instructograph. The Instructograph was made from 1947 or earlier to at least
up until the late 1950's and was available with both an electric motor drive
with cord and plug, and with a hand crank and spring drive. These machines
read perforated tape which is drawn across a contact point. They were
available with several different perforated tape rolls and an instruction
booklet by O.B. Kirkpatrick. The Instructograph Company was located in
Chicago, IL. early on, but appears to have later moved to Glendale, CA.
From URL: http://members.cox.net/w1vet/Practice/practice.htm
INSTRUCTOGRAPH CODE PRACTICE MACHINE The Instructograph was produced from
the 1920s until at least 1983! Instructographs were used by many thousands
of would-be telegraph operators to learn and increase their code-copying
ability. The original versions used a hand-wound spring driven motor with a
centrifugal governor and were supplied with American Morse Code paper tapes
with short holes for dots and long holes for dashes. They were sometimes
also supplied with KOB sets as shown. Later models used electric motor
drives and included a battery powered and later AC line powered oscillator
to produce tones for training radio operators. View 2 View 3

I had one in the late 40's -- windup spring type. Donated it in the late
50's to a boys school in Pomona, Ca. Dozens (maybe hundreds) of kids learned
the code from it.

For me having learned the code -- it was instrumental in my gaining an
aviation rate and electronic school when I joined the Navy in 1951.

In the spirit of the holidays, I award you 25 liberal points for your politically correct reply.

You, and like minded folks enjoy calling folks bigots, racist, and other pet names of those that would point out a truth.

Utter nonsense! No one group has the handle on perfection, not white, Black, Hispanic, or anyone else. You would have us believe that any statement made towards the less than savory element of a group is an attack on the entire group, thus rendering us deserving of a favorite liberal label.

You pick up the newspaper and read about a driveby shooting, does the image of a freckled faced, red headed white boy pop into your head?

Some members of every group are criminals and lowlifes, the poorer the group, the greater percentage of criminals. Sticking your head in the sand and refusing to acknowledge what is in front of you for the sake of political correctness is pollyannaish at best. Join the rest of us in the real world.

You have to check the characteristics of the specific tubes, but many
of the sweep tubes work about as good on 6 as they do HF.

Been there, done that.

Of course I like radio, however it is not the do all be all of my universe.
When I come across an asinine statement in a newsgroup or a bar I respond.

Political correctness was best defined by George Orwell in his novel
"1984". It was called correct speak. May I suggest you check it out at your
local library if you really are interested in the definition.

Few people are aware of history... There were provisions in the treaty
that ceded California to the United States by Mexico that stated that
Mexican citizens would be free to cross the border at will, that
Mexican nationals would be allowed to do business and attend schools
in California, and that these people would not be required to learn
English to participate in their normal everyday lives in California.

I live in a neighborhood populated primarily by Mexicans and
Central Americans. They are the nicest people you could hope to meet...
two parent families with kids. They are law abiding, church going folks
who respect and appreciate America a lot more than some people who have
lived here for generations. When I think of what it means to be an
American, they are what I think of.

See ya

Shot the hell out of my History! Our books taught that the INDIANS were the majority here, before the arrival of those from Italy and so on. I've never heard of them speaking "Spanish" - however, if they did, then so be it. I wasn't there, so I can't defend or deny it. I can only go on what I've been taught.

I'm basing my statements on current day. MOST people are able to speak English - and do - however broken it may be......I just can't see why the catering to a "specific" group when many inhabit this country. Where is the fairness?

Eh, let God sort it out. It's more his line than mine.

My TH-79A DOES tune down that far, and transmits on 422.620 as shown below. However I did cut the MARS jumper inside when I first got it. My other 440 MHz radio will NOT transmit down below about 435 MHz so I can't easily tell if the HT is receiving anything there. Just took the HT up to my shack and it hears a signal from my sig gen on 427.620 MHz just fine.

When you set the PL tone, press the TONE button (* key) to enable just the transmit tone. The display will show an inverse "T". If you press the CTCSS button (3), it'll enable both receive and transmit tones, and you'll see a "CT" next to the inverse "T".

Sounds like you've got it working but might just have the PL enabled on the receiver.

Check the Mexican Cession, or the Treaty of Guadalupe Hidalgo. A quick perusal
of the treaty at http://www.azteca.net/aztec/guadhida.html doesn't say much
about which language anyone is to speak or not speak...

It's been a while since my school days, but it would either be the
treaty signed by Pico at the Campo de Cahuenga, or the formal treaty
radified by Congress which defined the border between Mexico and the
US. (I think it's the formal treaty.)

As I remember it, the crux of the issue was that the treaty called for
all landowning rights of the Spanish and Mexican inhabitants to be
honored according to the Spanish or Mexican laws; and the Mexican
inhabitants of the territories be given all rights accorded to American
citizens. In essence, this was intended to preserve the established
Mexican infrastructure already in place in the territories and protect
the rights of the Mexican inhabitants and propery holders.

However, soon after this treaty was signed, the California gold rush
started. Laws were quickly enacted which negated the terms of the
treaty, and courts ruled against the claims of Mexican landowners
citing protection under the provisions of the treaty. Land was taken
away from its owners, Mexican infrastructure was replaced by American
institutions, and the Mexican population were never given the rights of
citizenship that they were promised. They were forced to either
relocate to Mexico, or take up drastically reduced social status along
with the Indians. In either case, they had to relinquish the homes and
property that were rightfully theirs. A lot of the hard feelings in
Mexican-American relations over the decades can be traced back to this
breech of promise.

Hope this helps.

See ya
Steve

I'm kind of wondering if each battery has different requirements on
charging.
I know that some batteries also have different charing rates(V and A) based
on the cycle usage.

Any one else have any comments?

I lived in Japan for nine years, and had a lot of contact with their version of English. Their method of teaching is primarily rote memorization, with only a little teaching on grammar differences, and differences in meaning between two similar phrases. They do try hard, and I would challenge you to learn their language half as well as the average Japanese learns ours. BTW, their primary written format is top-to-bottom, right-to-left.

My grandfather died a couple years ago. I was the receipient of some nice pieces including a Yaesu FT 990, a Drake L7, a heavy duty Ameritron tuner, and several other items.

Anybody know of a good way to get them from California to Virginia? I do not have the original boxes or packing material. I do not think I can "sneak" any of the major components back onto the aircraft for the flight back to DC.

Any ideas/suggestions?

Thanks

Rich

Take them to Mailboxes, Etc. or similar store and have them pack and
ship them -- insured, of course. They should know the best way to
pack heavy items.

Hello,

I haven't had these for too long. Frankly, I need some cash for them
and their application is too limited. I want to put the cash to
something else in ham radio.

I have the NR22L Diamond 2 Meter Antenna. I would like to sell it for $60.
It is in perfect condition.

I have a trimagnet mulehorse mount. The mount and the antenna are only
one month old. I nicked the outer rubber on the coaxial to the mulehorse,
but I didn't break the sheath. I am looking for $40 for this.

I would prefer someone local so that I don't have to ship.

>
> Any one else have any comments?

Please read all my comments because there is
a few things that i need to point out.

You use different charging methods for the
type of service you are using a the battery for.

If you are using it for fork lift, motive power,
or other full charge/ full discharge application.

You want to bring it to full charge as quick as possible.
set current limit to c/10 or even c/5
So you set the float voltage to ~15V and when the
current drops off bellow c/100 then you have a full charged battery
that's ready to go back into the device it's running.
If you leave them hooked to the unit at 15V they will
broil dry after a while.(ie) destroy the batteries.

If it's a standby application where it's hooked up all the time.
Set charge current limit to c/20
You set the float to around 13.5 to 13.8 and hold it there.
That will keep the batteries at 100% charge and won't over charge them.
But it will take a long time for them to reach full charge.~2days or so....

And the charging rate is based upon the size of the battery.
C/20 means that it's charged at one twentieth of it's rated AH.

There is some batteries called gel cells that you can only charge
so fast because if you charge them too fast, bubbles will form in the electrolyte.
And the damage is usually irreversible.
The charging rate for them is usually limited to C/20 or even less......
If it's a 10AH battery, you can only charge it at 0.5A max.

> >I have some sealed lead acid batteries(commonly known as
> gelcells)
> > and looking for some advice on charging.

That is the main point that the correction needs made.
That common knowledge is INCORRECT KNOWLEDGE

Most sealed lead acid batteries are not gel cells.
They ARE most likely, "Absorbed glass mate."/"Starved electrolyte."

Gel cells are a decent bit more expensive and if a sealed lead
acid battery is a gel cell.... It will proudly proclaim it on the side.

If it doesn't specifically say "GEL CELL" ......
Or "GELLED ELECTROLYTE"
Or "GELLED BATTERY"
Then it isn't a gel cell.

The "Sealed battery is gel cell" myth is one common myth
that you need to realize is false.

I would say that 90 to 95+% of sealed batteries are NOT gel cells.

Most sealed batteries will handle the usage that a normal flooded
cell will handle.

There is one exception.....
You have to avoid applying overly high charging voltages to them.
Because they are, by their very nature.... sealed.....
So once you broil the electrolyte away.... you can't put it back.

> > Looking around I find that most of the chargers out there are mode
> > chargers. Some go by current or by voltage.

Ones that go by current are strictly for cyclic use.
When you charge at c/10.
You hook it up and 10 hours latter, you disconnect it.
Or the timer in the charger shuts it off.

>>On the common voltage chargers,
> > they say that during the "absortion mode" the charger limits the charging
> > current to say, around 500mAh or so, and raises the battery voltage to

> > charger lowers the voltage to somwhere around 13.4 - 13.8V as in the
> "float
> > charge" mode.

That is the best type for any application.

It charges them close to 15V to get them close
to full charge as quick as possible, then it switches to
13.8 V to keep it at full charge without broiling the battery dry.
That way.... if you forget and leave the battery on the charger
for a day or two....
When you see that it's still on, you won't find a FRIED battery.
You will find a nice fully charge one.

Most of us do. Some don't. From where I sit, they SHOULD learn English,
but it doesn't come overnight. In prior eras of immigration, the women,
who often did not work outside of the home, did not learn English, while
the men did. Both of my great grandmother's on my mom's side are
examples of this.

Yet when you go into most Social Service

> to one group???????

We cater to the group with the largest numbers. It is simply more cost
effective that way. I'd wager that in certain parts of Los Angeles and
Orange Counties, California, that several Asian languages are
represented very well. In San Francisco, Chinese has been a defacto
second language for over 100 years.

WE supposedly pride ourselves on being fair and equal...

With all due respect Lou, may your children be sentenced to working less
than minimum wage manual labor jobs with no health insurance. What's
fair is that all people are treated equally. Be happy that you live in
the one country on earth that people strive to come to!

Yes, many of these places can form dense foam around the item to make
a very solid package used by many manufacturers for one-off items.
Bubble wrap won't do it for really heavy, dense items like older
radios.

Better yet, have them (MBE) pack it and then take it with you out the front door. Arrive at the airport an hour early and air freight it on the same carrier you are flying on. They will assure it is on your flight and you can pick it up when you arrive at Dulles (I know it is renamed, old habits die hard). I have done this with test equipment when I am doing on-site service calls. Works well.

> fairness?

OK, Lou. So the natives lived here once and their language use was overrun by then massive influx of Spanish. The natives perhaps complained but had to yield to the reality.

Then the Spanish influence subsided as it was overrun by then massive influx of English speaking caucasians. The Spanish speaking people perhaps complained but had to yield to the reality.

Currently here a massive influx of Latinos. English speaking caucasians may complain but some parts of the country are currently bilingual, like it or not. That is the reality.

I doubt the melting pot phenomenon will work any more due to the proximity of Latin America and technological advances in communications and travel. Latinos do not neet to severe the contact with old contries like those getting off the boat some generations ago.

Learn Spanish.

Happy Holidays.

I haven't found frequency info on the 6KD6.

I've got an RCA tube manual, but since the 6KD6 was a sweep tube, they don't show it's frequency characteristics.

TV "sweep" amplifiers operate at 15Khz, that is what the tube was designed
to run effiecntly.

With ALL due respect Dave,

IT is happening to more than just "my" kids..... Or haven't you been watching the news?
Maybe they aren't being paid less than minimum, but some companies try to beat not paying - any more than minimum or "overtime". If they could get away with paying less than minimum, I'm damned sure they would. And MANY companies are shutting off Health Care. So, your wish is coming true, for my kids, your's - if you have any and every one else's. I wouldn't jump for joy even if you have a job with those "benefits". Here today, gone tomorrow. IT IS POSSIBLE!!!!!!!!! You may be taken from a corporate position straight into a McDonalds just to feed your family.... I would be careful what you wish for - for others, it has a terrible way of biting one in the ass.

May you have a Happy Holiday... Next year it could be a whole lot different!

Isn't that just sweat. Maybe we should welcome their desendants back with
open arms...right? Crap happens in war. We won, they didn't.

Maybe if the Mexican government really gave a rip about her people we
wouldn't be needing to put out armed patrols to keep them out.

If he's going to accompany the items on a flight, he might just as well go to a packaging store, buy the foam chips and boxes, double box the items himself, and carry them to the airport. Would be cheaper than getting MBEtc to do it, I suspect.

I can agree with that. To a great degree, the attitudes that made them such a threat in the marketplace in the 80's, was a direct result of their emulation of their perception of US from movies, propaganda and such, and our own greed, stupidity and laziness. Despite their homogeneous society that is difficult for foreigners to gain acceptance in, we manage to co-exist and complement toward the greater good of both our societies now.

I still have just as much "fun" trying to decipher German, Japanese and even British and American schematics with cryptic hand written notations that may reveal the frantic attempts of some genius to achieve perfection on a budget before being rushed into production.

I ain't seen the purfect radio yet.

Thanks for the info.

Any recommendations for the tubes? Shipped separately? In the unit?

I'd hate for the filaments to jar loose and to have to spend $400 for two
new 3-500Zs.

How should the FT-920 and SB-220 be connected together ? Should I use an external antenna tuner between the 920 and 220 instead of the internal auto tuner on the 920 ? What type of coax and length between the two ? Thanks, Sam KG4HEB, callingdx@yahoo.com

FIRST and most deadly, you need a switching relay between them, unless your sb 220 has soft key mod....second, the 220 has a tuned input, you wont need it except on 17 and 30 meters but you can use the 920 internal tuner for the warc bands...Length of coax is not normally critacal, standard three and 5 ft jumpers should do it, as short as possible though....always. And RG 8 after the amp....before I think 58 is ok if well done...Good luck Sam, do the Richard Measures mod to you SB 220 and that will solve all your possible problems, but definitely get a keying relay between the 920 and ths SB 220 if you dont have time to do anything else...73 Murray K5MDM

If ya can't speak English in the United States of America, then GET THE FUCK OUT!

I'm a Bad American-this pretty much sums it up for me. I like big trucks, big boats, big houses, and naturally, pretty women with big tits.

I believe the money I make belongs to me and my family, not some midlevel governmental functionary with a bad comb-over who wants to give it away to crack addicts squirting out babies.

I don't care about appearing compassionate.

I think playing with toy guns doesn't make you a killer. I believe ignoring your kids and giving them Prozac might.

I think I'm doing better than the homeless.

I don't think being a minority makes you noble or victimized. I have the right not to be tolerant of others because they are different, weird or make me mad. This is my life to live, and not necessarily up to others expectations. I know what SEX is and there are not varying degrees of it.

I don't celebrate Kwanzaa. But if you want to that's fine; I just don't feel like everyone else should have to.

I believe that if you are selling me a Dairy Queen shake, a pack of cigarettes, or hotel room you do it in English. As of matter of fact, if you are an American citizen you should speak English. My uncles and forefathers shouldn't have had to die in vain so you can leave the countries you were born in to come disrespect ours, and make us bend to your will. Get over it.

I think the cops have every right to shoot your sorry butt if you're running from them after they tell you to stop. If you can't understand the word 'freeze' or 'stop' in English, see the previous line. I don't use the excuse "it's for the children" as a shield for unpopular opinions or actions.

I know how to count votes and I feel much safer letting a machine with no political affiliation do a recount when needed. I know what the definition of lying is, and it isn't based on the word "is"-ever.

I don't think just because you were not born in this country, you qualify for any special loan programs, gov't sponsored bank loans, etc., so you can open a hotel, 7-Eleven, trinket shop, or any thing else, while the indigenous peoples can't get past a high school education because they can't afford it.

I didn't take the initiative in inventing the Internet. I thought the Taco Bell dog was funny.

I want them to bring back safe and sane fireworks.

I believe no one ever died because of something Ozzy Osbourne, Ice-T or Marilyn Manson sang, but that doesn't mean I want to listen to that crap

from someone else's car when I'm stopped at a red light. But I respect your right to.

I think that being a student doesn't give you any more enlightenment than working at Blockbuster or Jack In The Box.

I don't want to eat or drink anything with the words light, lite or fat-free on the package.

Our soldiers did not go to some foreign country and risk their lives in vain and defend our Constitution so that decades later you can tell me it's a living document ever changing and is open to interpretation. The guys who wrote it were light years ahead of anyone today, and they meant what they said - now leave the document alone, or there's going to be trouble.

I don't hate the rich. I help the poor. I know wrestling is fake. I've never owned, or was a slave, and a large percentage of our forefathers weren't wealthy enough to own one either. Please stop blaming me because some prior white people were idiots - and remember, tons of white, Indian, Chinese, and other races have been enslaved too - it was wrong for every one of them.

I believe a self-righteous liberal Democrat with a cause is more dangerous than a Hell's Angel with an attitude.

I want to know exactly which church is it where the "Reverend" Jessie Jackson preaches; and, what exactly is his job function.

I own a gun, you can own a gun, and any red blooded American should be allowed to own a gun, but if you use it in a crime, then you will serve the time.

I think Bill Gates has every right to keep every penny he made and continue to make more. If it makes you mad, then invent the next operating system

that's better and put your name on the building. Ask your buddy that invented the Internet to help you.

I don't believe in hate crime legislation. Even suggesting it makes me mad.

You're telling me that someone who is a minority, gay, disabled, another nationality, or otherwise different from the mainstream of this country has more value as a human being that I do as a white male. If someone kills anyone, I'd say that it's a hate crime. We don't need more laws! Let's enforce the ones we already have.

I think turkey bacon, turkey beef, turkey fake anything sucks. I believe that it doesn't take a village to raise a child-it takes a parent with the guts to stand up to the kid and spank his butt and say "NO!" when it's necessary to do so. I'll admit that the only movie that ever made me cry was Ole Yeller. I didn't realize Dr. Seuss was a genius until I had a kid.

I will not be frowned upon or be looked down upon or be made to keep silent because I have these beliefs and opinions. I thought this country allowed me that right. I will not conform or compromise just to keep from hurting somebody's feelings. I'm neither angry nor disenfranchised, no matter how desperately the mainstream media would like the world to believe otherwise. Yes, I guess by some people's definition, I may be a bad American.

Most past immigrants from non-English speaking countries did not learn
anything but rudimentary English. The children were the bilingual,
assimilated ones.

What happened with Italians, Czechs, Poles, Germans, Greeks and many others
is happening with Hispanics. It's very, very hard for an adult to learn a
second language, but the first generation does learn and well.

How can they when they don't even try? I think Spanish culture forbids them
from learning English. They watch Spanish TV, listen to Spanish radio and
read Spanish newspapers...

The same as the Germans, Poles, Italians, Yiddish-speaking Jews, etc.
listened to radio in their respective languages and read newspapers in
their respective languages.

Get out of your suburban hell-hole and spend some time catching up on the
history of New York City and you'll see what it was like here during the
turn of the century.

Nothing new has been said on this thread. ENOUGH ALREADY!! We get the
point.

Just like Italians did... the original immigrants used Italian media, lived
in Italian neighborhoods and generally learned very minimal English.

It's an established, proven fact that becoming bilingual in the true sense
requires learning the second language before adolescence. Adults generally
learn new languages minimally and tend to never be bilingual.

I always use the Spanish button on the Kroger U-Scan so I don't have
to listen to the English. It's more pleasant if you don't understand
it.

I assume Hispanics will do the same thing only in English.

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100 watts HF + 6 Meters. It has a Auto tuner and the MC 100 Desk Mic. In the deal you will get the technical supplement too (AKA Service manual), as well as the owners manual. I also Have the 3 kW Roller Inductor Antenna Tuner. They are in good shape I will trade both for a FT 990 or a FT 1000. I have been using the FT 920 as a backup rig. Drop me a line so we can work out a deal.
oris@dirtball.com
I have a Icom ICR71A Shortwave receiver that I will trade for a working DX 100 and SX 300 or Hamuland HQ 110. I'm looking for a good AM Ham station. I will trade this Receiver for a good working AM station. I want both transmitterwith at least 100 watts out and receiver. I hope to find something to work with my Audio rack.
I also have a Henry Amp 2 KD 5 Desktop, (It needs a new Plate amp meter) two 3-500s 100 in will give you 1250 out, New Caps, that I will trade for a Globe King or full legal output Ham band AM transmitter. this is a pickup trade only. I will be willing to travel 100 miles from Athens GA.
I also have a Hallicrafters S 38 C Shortwave receiver. Its in great shape. It works but I have no idea what its worth. It is a old old receiver. (Make Offer)
I have a MFJ Versa Tuner II and a Roadtalker 40-channel sideband CB radio that somebody converted to 10 meters. It works quite well. I talked to a guy in South America on it. (Make Offer)
I also have a CBS 1000 transceiver. 25 MHz to 29.795 MHz. In 10 kHz steps. I got it at a hamfest in Georgia. I'll trade it for a SX 300 or NC 300 HQ 110 HQ 170 HQ 200 or similar HF receiver.
I have a Kenwood TM-2530A that I used as a 2 meter packet station. It needs a Mic and the light that lights up the liquid quartz dial. The radio works fine and is in good shape. I looking for a good AM transmitter.
I have a Kenwood TR 7850 This radio I used as the BBS access on 2 meters. It needs a Mic and needs a new lithium battery backup. I turn the radio off and back on it forgets where it was and defaults to 144.000Mhz. Other than that the radio works fine. I want a working AM transmitter.
I have a Kenwood TM 201a. I used this 2 meter radio as sat transmitter. I worked Mirror before it came down. It Needs allot of work. It needs a dial. The Freq. read out is all screwed up. This is a fixerupper. It receives fine and transmits fine. It needs a mic too I will though this in too with either one of the above 2 meter rigs
I have a Versa Tuner II 949c and a Palomar PT 340 tuner tuner that I would through in too with either one of the above 2 meter rigs. I also Have a Kenwood KDC 1011 mobile CD player that has the plugs set up for a the older fords. I will through it in too with either one of the above 2

meter rigs.
I also have a Behringer Ultra Graph Pro GEQ 3102 31 band equalizer that
I will through it in too with either one of the above 2 meter rigs.
Hey thanks for reading

You have a good point. We (the USA) seem to actually be nuturing their native language here rather than nuturing english.

I also might add, I do not have a command of the english lingo myself, but I can write (a bit) read and speak it. I think anyone who wishes to become a part of our culture should make a faithful attempt at learning the english language. I would attempt do the same if I lived in their country. I think it's a basic respect for each other's culture to do that.

You should take a poll of how many of the roughly 500,000 gringos who live
in Mexico speak anything but rudimentary Spanish. You could probably use
your fingers and have some left over.

7363. Kenwood TS-450S/AT Questions

I recently acquired a TS-450S/AT, and am looking for a couple of modifications for it. I understand there is a mod to remove the AM broadcast band attenuator to improve performance. Also, I think there is a mod to speed up the AGC action. These mods are not on any of the popular modification sites and I have been unable to locate them elsewhere on the internet. I do have a copy of the service manual for the rig. Any help would be appreciated. Thanks and Happy Holidays,

Kevin, K9HX

That does not suprise me. I have never been in Mexico. I think Spanish
is a great language, I wish I knew it, now a few words only. Russian is
another that I would just like to know at least a little.

What's wrong with knowing another language? Nothing!

I can only respect someone who knows more than one language!

I should get off my dead A.. and learn one.

Yep...its hard...but lets see some trying ... ok? I used to live in North Miami Florida, back in the 80s. The road signs were changed to Spanish. The schools became bi-lingual. No matter if the kid didn't speak Spanish...thats what they were taught in. BULL. I took my kids and moved to Tamarac where they still spoke English.

Then I moved further North. To Alabama where the only Spanish heard was to the Cuban prisoners in the Federal prison in Talladege county.

Felise Navidad

Hate to break the bubble here.....My background is Italian. Grandpa and
Grandma spoke Italian. Their kids spoke English. Grandpa spoke both.
Grandma cooked a lot.

My mother spoke ONLY English and was not ALLOWED to learn Italian.
Whatever.

Go to "http://www.qrz.com" and look for mods. They have almost
everything. Uae at you own risk.

My mother is Polish, she still speaks it especally when she gets angry.
She's 87 now and still gets very angry sometimes. I love it.

I know, I know this does not have a damn thing to do with radios, but
what the hell.

Happy holidays to everyone everywhere. I'm all done.

As I staed in my first post, the mods I am looking for are not avaiable at QRZ, or any of the other popular sites that list modifications. Thanks anyway,

Kevin, K9HX

Here is a quick and dirty way to change the AGC response time

http://user.chollian.net/~cyberline/agcmod.htm

If you can't read Japanese, use babkefish to translate.

> How does one say McDonald's or Pizza Hut, or Radio Shack in French?

I just ran it past Babelfish and it came up with Hutte De Pizza.

Anyway, we get the same thing in Wales with English / Welsh signs, and if you happen to live in London (not that I can work out why anyone would want to live in a city) you will end up with forms in one of 30 languages.

Why can't governments simply state what is the main language and have all signs in that language. Lets face it, we muddle through when we go to countries that don't speak our native languages.

Neil.

I do that to a lot of things ranging from the computer monitor control
thingy to those double-sided bilingual forms they give you to fill
out.

This reminds me of something I saw in Monty Puthon's Flying Circus...
It was a sketch called 'Joke Warfare' or something. I got it somewhere
in my massive Betamax archive of shows taped off of TV.

A lot of the best was done in the 60's in Quebec. Do a search on language
learning abilities and you should get it.

Would you please take the rec.antiques.radio+phono group out of
your off topic discussion. For those of you who are newsgroup
posting challenged, it isn't very hard, just take the group out of
the list of newsgroup you are posting to. We really don't care
about your language problems.

Hi,
Does anyone out here have an SM-10 in use with a Icom 706MKIIG? Does anyone have a schematic/manual of the SM10 to copy for me. I will pay copy and shipping costs.
Thanks

Amateur radio - What a hobby!

Actually, the USofA is one of those rare birds: a fully
industrialized country with NO official language.

There have been attempts to make such a declaration, and in fact
everytime Congress has attempted to pass a resolution making English
the Official Language of the US, it's been roundly shouted down.
```

So, not only is there no legal requirement in the USofA to speak English, there is less motivation to learn it every day.

If you don't like these facts, you may wish to write your Congressmen and Senators, they're the only ones who can change it.

In English, would be nice.

Wishful thinking to be sure. The ONLY thing our politicians are going to change is their pay scale. They are much too cowed by the politically correct crowd to stand up for anything but more taxes and increased government control over you and me. Expecting anything else is pure folly.

Yah BUT!

The tube didn't run a straight sine wave and they were used as the finals for quite a few 160 through 10 meter rigs in the 70s and into the 80s. I believe both Drake and Swan used sweep tubes. At any rate sweep tubes were very popular for use from 160 through the 10 meter band back then. And they were cheap! We used 6L6s to get near 100 watts input across the HF band and they are listed as audio tubes.

Some amps were designed to run as much as a KW, or slightly more using 4 across the whole HF range. One such amp was the GLA-1000. They worked very well on 10 meters and I have little doubt they would *probably* work on 6 with reduced ratings.

I don't remember the name of the amp, (this was quite a while ago) but a friend picked one up at a swap. It was a 10 meter and 6 meter rig....You can guess it's real purpose. He couldn't get it to work. I checked and the tank coil tap was permanently set at (10 meters?) I switched to the 6 meter tap and we were getting about 160 watts out of the pair of sweep tubes...and no I don't remember which ones..

Your "Lord" is no more believable than Santa or the Easter Bunny. If that makes me a heathen in your book... fine with me, though I'd prefer to be known as an adult free of the superstitions the human race picked up when we still lived in caves.

BTW, you were off topic to boot :^)

I will try the search. But surely, the "requires learning
the second language before adolescence" is an exageration.
I have several Asian acquaintances who have come to stay at
my home while studying English -- most were mid to late
20's. They did learn English fluently.

So you mean that the people who first started to convert the americas
to our western standards should still be commemmorated.

Uhhh, was that not some guy named christoffel columbus?

Was that a brit? or a german ? or a dutchy (who owned NY one day)

Geeee, that was a guy from spain.

First come, first serve ??? :)

Get over it, and think that all people should have the right to work
and live. Think of ways that politics and economics can serve the
world around you, and see that if everyone has a decent job and
a decent world to live in, there is no need to fight.
Just respect that some people eat different or speak different but
still have the same needs as you do. Eat and drink and think for
basics

So, go to them and speak with those that can speak english.
Get them to join in your community and understand what drives you
and while you are at it, find out what drives them.

Hint, their cooking aint bad :)

BTW same discussions applies to europe in respect to people from
other foreign countries that migrated over here to seek the pot of gold.

The discussion is for us how to find ways to respectfully integrated them
to our societies, whatever language that might be

grin, i can picture that

> I know, I know this does not have a damn thing to do with radios, but
> what the hell.

well .... If i switch on my shortwave set, I can hear and speak to all of those languages. If i turn on my TV I can find channels where I dont have the faintest idea what they are talking about.

Might it be that without all this, the immigrants were more forced to join in our local communities, on the other there is a good oppurtunity to speak with them.

Within the ham-community those people that love to communicate try and learn some universal language. That might be english, but for me i can chat along in italian/dutch/german/french/spanish and some rude jewish words. Maybe I can pick up scandinavian or east-european words.

I love to communicate, and if I trigger the other party to try and communicate
in some language we both know a few words in, the fun starts.

Really, I know a lot about other countries and their history. This enables me
to speak and respect them, but be respected as well. If that matters :)
Well, to me it does, and discussing things like that on this NG is part of that.

Ed (whose ancensestors were once kicked out of france because they thought different about the bible) (around 1530, so what is new :)

everyone who respects freedom allows this, remains to be seen if that
is a wise choice

> I also might add, I do not have a command of the english lingo myself,
> but I can write (a bit) read and speak it. I think anyone who wishes
> to become a part of our culture should make a faithful attempt at
> learning the english language. I would attempt do the same if I
> lived in their country. I think it's a basic respect for each
> other's culture to do that.

Which is true, but now there is something coming to my mind.
Based on the same experiences here in Europe, that mostly the people
that immigrate for work elsewhere are not the most well skilled cause
otherwise they would not have to seek for work and a better future else
where.

So it might not be disrespect, but perhaps their ability to learn this that
is hindering them. Food for thought is also that while they are hard at
work they get tired and rest at night.

This is a worldwide discussion for which I hope the politicians and
everyone involved find a good formula to let immigrants integrate
within their new community and all people to be happy with that.

The more the world is mixed, the more the world be a better place as
we all learn what drives the other and why and so. Xmas allways makes
me think of that (those darn romans invaded both the jewish as the
arabian world. They should not have done that. Would have saved us a
lot of hassle nowadays)

I have for sale a Communication Specialist 64 tone CTCSS/burst switch encode box. It comes with the cable and dc wall adapter. I do not have the manual for it and will take $30 plus shipping....I can be reached at (508) 821-2993 or email....WZ1U Steve / Lakeville, Ma.

7408. Hallicrafters HT-41 Schematic

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-25 13:59:56 UTC
From: Ed Williams <sunset392@cox.net>
Message-ID: <wRiO9.65700$pe.2237084@news2.east.cox.net>
Source record: 35519

Hi All, I am in need of a schematic for the HT-41 Amplifier. If anyone has a copy they would be willing to send me I would be very greatful and willing to pay for the copying or you could email it to:

sunset@exis.net

Thanks and Merry Christmas and Happy New Year.

I bought one from a local guy about 6 months ago. It is the TS-450S-AT, internal antenna tuner included. It really was mint, it was his backup rig with probably less than 100 hours use. He included everything that originally came with it, boxes, microphone, manuals, etc... Then on top of that he tossed in a set of Kenwood head phones (HSC-5) at no extra charge. He wanted $475 for it. I couldn't get my wallet out fast enough! As I was leaving he stopped me and gave me the dust cover for it too! What a deal. He's a real good guy!

Hi all. Does anyone know if this rig has an adjustable low power (5 watt) position, that is to mega low power of 1 watt or less? I checked on the mods pages, but there's nothing mentioned. Any help would be appreciated.

Thanks,

Gary/WB4YQR

The low and medium power is controlled using fixed value SMT resistors
that are switched with transistor switches. You should be able to
change the low power setting resistor to some value that will give you
the desired output. Look at the schematic you should find them close
to the power control transistor and APC circuit.

One caveat.. sometimes when the power amplifier modules are run at to
low of a power setting they can have a spurious output.

Hmm... Broken squelch, missing belt clip, no dc cable..... And it is in
very good condition???

Steve you have a perverse definition of very good :-)

But it is an excellent price for the radio as described and at least you did
accurately describe it.

Steve

I see on Fox News this morning that US universities are upset because
the FBI wants information on all students from terrorist countries and
are resisting coming up with all the information they have on these
foreign students......how stupid.

I could just see the results if Pan Am Tech Services would have
resisted giving the Savak, the Iranian Secret Police, information on
me living in their country.

What's wrong with us? Are we crazy??!!

I'm, personally, for sending the problem home....EVERYONE, Arabs,
Iranians, Israelis, Afghans, Pakistanis, Kurds ...anyone born in the
entire Middle East region. Simply export the problem home and don't
let anyone from any of these countries back in MINE..... They have no
right to our country, none, no more than I have a right to live in
Iran or Bahrain or Arabia or Qatar.....

Damned Liberals think the whole world has a right to our country....

Larry

With all this hoopla about homeland security, why isn't there a
"Terrorism Information and Prevention System" that Americans can really use?
Why not start reporting illegal aliens and criminal alien residents?

Illegal aliens are technically subject to deportation at any time.
Their very presence violates federal law. Lawful permanent resident
aliens-that is, anyone with a "green card"- can become deportable if they
are convicted of certain crimes. These criminal alien residents can lose
their permanent resident status and be deported right along with the illegal
aliens and non-immigrant visa overstayers - if the proper authorities knew
about them.

The Immigration and Naturalization Service is the proper authority to
whom to report the presence of 1) illegal aliens, 2) non-immigrant visa
violators and 3) green card holders who have been convicted of crimes.

Contact your local INS office and ask for the Investigations Division
or the "Enforcement Office." If you cannot speak with an INS Special Agent
from the Investigations Division, ask to speak to a Deportation Officer from
the Detention and Removal unit. Make a report over the phone or go in
person. Officers in the Investigations Division are obligated by law to make
a written record of your report.

If you live in a border area - roughly, within 50 miles of the
border - you also have the option of contacting the nearest U.S Border
Patrol field office to report the presence of illegal aliens. You can call
or go in person. If there is no Border Patrol station listed nearby, contact
the nearest Border Patrol Sector Office to find out if there is a local
sub-station that is not listed on the web site. The group U.S Border Control

also lists additional contact numbers.

Illegal aliens and criminal alien residents might be up to some type of fraud against the Social Security system too, since false documents are a way of life. The Office of Inspector General of the Social Security Administration operates a fraud hotline for reporting misuse of social security cards and false statements on claims-whether by employers or employees.

Prosecuting Social Security fraud has been used successfully to tie-up terrorist suspects, even if they are not illegal aliens. Report criminal violators to the FBI for prosecution by the U.S. Attorney.

Though it has been accused of giving cover to illegal aliens through tax ID numbers, the Internal Revenue Service also accepts citizen reports on general tax fraud including "earned income tax credit" abuse. The IRS' criminal investigation division handles employment tax fraud reports.

The Department of Health and Human Services maintains a hotline for reporting Medicare or Medicaid fraud, child non-support, AFDC fraud, and abuse of related programs.

Also, believe it or not, all male illegal aliens (as well as male permanent resident aliens, ages 18 through 25) must register with the Selective Service System. If they do not register, they can be prosecuted for a felony and fined up to $250,000 and/or be put in jail for up to five years. They also may not then be eligible for U.S. citizenship. And there are state penalties for failing to register. Selective Service registration is conveniently available in Spanish. Report draft registration violators to the FBI for prosecution by the U.S. Attorney.

What will the INS actually do when you call?

It will take the information down, as it is legally obligated to do....and probably not much else. It may get interested in a criminal alien, an alien that's the subject of some other type of investigation - for example an Arab terrorist, an alien smuggler - or an alien who has been deported before.

Non-criminal aliens might be sent a letter by the INS Deportation section, saying, in effect "Dear Mr. Alien, you have been already ordered removed by an immigration judge, or we know you have overstayed your status, please come in to the INS office to be deported, bring one bag." (These are known as "run letters," for obvious reasons.) But even this doesn't always happen.

But none of this should make any difference to VDARE.COM readers. Your report will be on record. The government will know about it - and will know we know it knows about it. The Chinese say a journey of a thousand miles must start with one step. Americans can start regaining control of their borders - and of their nation's destiny - with one phone call.

For those who don't have a belief in a God or supreme being,
this is not your holiday. Your holiday is celebrated here in the
U.S.A. every year on April the first.

hate to dissapoint you

but christmas and easter were both stolen by the christians

Yuletide is what it really is and has nothing to do with the birth of
christ,which i have no problem with,but just wish religion would not hijack
ancient pagan festivals.

i am not doubting the birth of Jesus but on December 25 th i dont think so.

so happy yuletide,but dont et hung up on the religous meaning.

sorry mate it is not your holiday

Yuletide is a lot older than what we call Christmas,but both those who want
to celebrate christmas and those who want to celebrate Yuletide or indeed
those who dont want to celebrate for any reason,lets think fo peace and
goodwill.

and hopefully not war as your Mad warmongering president wants

as one of the UKs newsapapers said the other day,Bush is the most dangerous
world leader.

regards

Is it really so difficult for you not to select and read it?

Check my post. I said "to become bilingual." Some people have an ability to pick up a language after the pre-adolescence period and to speak it competently, but they will always be translating form their native tongue in most cases.

Nearly all people who learn a language in adolescence or adulthood do not learn to speak truly fluently. They may be able to conduct a conversation, but they are not at ease in the language ever. Most don't even achieve that level of proficiency due to the amount of time it takes, the degree of concentration required and the variances in individual skills.

The average immigrant comes to work, and has little time for formal study. Some pick up more of the language, others pick up very little.

We all know foreign born people who speak reasonable English because, and this is key, those are generally the only foreign born we are going to have contact with if we don't speak their language. So we see the exceptions, not the rule.

I once spoke to a business owner in Chapala, a retirement area in Mexico where well over 100,000 US retirees live. He insisted he had never found a single retiree who was even close to fluent in Spanish despite many of them having been in Mexico a decade or more.

Absolutely. Nobody minds them celebrating at the same time but it
would be nice if they'd stop their religious preaching. Get thee
gone, foul preachers.

Which makes matters even worse.
So one ita goes out to find some land against the wishes
of the catholic church, for a foreign country.

Where is this world going for ?

Ed

ROTFLMAO!

Let me guess. You think YOU have exclusive rights to the name Michael
Terrell.

Tell you what pudding cup, ask one of the Michael Terrell's listed below.
Phone numbers are included for your convenience.

MICHAEL TERRELL
9650 LA SALLE AVE
LOS ANGELES CA 90047
(323)757-2424

MICHAEL TERRELL
628 KLAMATH WAY
SUISUN CITY CA 94585
(707)434-0882

MICHAEL TERRELL
16 KENSINGTON WAY
PORT JEFFERSON STATION NY 11776
(631)473-4322

MICHAEL TERRELL
19 FAIRWAY W
SAYVILLE NY 11782
(631)567-2878

MICHAEL TERRELL
12 BRUCE ST
WALTON NY 13856
(607)865-6722

MICHAEL TERRELL
12 BRUCE ST
WALTON NY 13856
(607)865-8960

MICHAEL TERRELL
103 E UTICA ST
BUFFALO NY 14209
(716)882-2697

MICHAEL TERRELL
35 OSAGE TRL
SPENCERPORT NY 14559
(585)293-0837

MICHAEL TERRELL

Isaiah 36:12
Hath he not sent me to the men that
sit upon the wall, that they may eat their own dung, and drink their
own piss with you?

Malachi 2:3
Behold, I will corrupt your seed, and spread dung upon your faces!

And thou shalt eat it as barely cakes, and thou shalt bake it
with dung that cometh out of man..." - Ezekiel 4:12

"Lo, I have given thee cow's dung for man's dung and thou
shalt prepare thy bread therewith" - Ezekiel 4:15

JOB 41:19.....
Out of this mouth go burning lamps, and sparks of fire leap out. Out of
his nostrils goeth smoke, as out of a seething pot of caldron. His
breath kindleth coals, and a flame goeth out of his mouth.

Isaiah 34:7
And the unicorns shall come down with them, and the bullocks with the
bulls; and their land shall be soaked with blood, and their dust made fat
with fatness.

Revelation 12:3 "...and behold a GREAT RED DRAGON, having SEVEN HEADS
and ten horns, and seven crowns upon his heads."

"If any one comes to me and does not hate his own father and mother and
wife and children and brothers and sisters, yes, and even his own life,
he cannot be my disciple." - Luke 14:26
(Jesus)

If god can prevent evil, but doesn't, then He isn't all-loving.
If god intends to prevent evil, but cannot, then He isn't omnipotent.
If god both intends to prevent evil and is capable of doing so, then how
can
evil exist?

> "JESUS is the REASON for the SEASON!"

Only for people who are into Christian Mythology. MOST people celebrate Christmas for Santa, gift giving, decorating pine trees and all that non-religious stuff that makes the holidays fun.

Jesus would actually be against the gifts and all the fun stuff that makes the holidays what they are. After all, anything that is fun or makes one feel good is a sin. FUCK THAT!!

MERRY FUCKING CHRISTMAS!!!! Don't let religion spoil your holidays!

>
> Yuletide is what it really is and has nothing to do with the birth of
> christ,which i have no problem with,but just wish religion would not hijack
> ancient pagan festivals.

Look, there is nothing religious or Christian about Santa Claus, decorating pine trees with electric lights, and giving gifts wrapped in colorful wrapping paper. Stop brining religion into something nice and fun and ruin it!

> i am not doubting the birth of Jesus but on December 25 th i dont think so.

Jesus is a make-believe character of Christian Mythology. At least Santa rewards with gifts and his worst punishment is a lump of coal in your stocking. Jesus gives no gifts, just threats of eternal punishments and burning in hell for doing anything that is fun or brings happiness. (sins)

Rv:12:7: And there was war in heaven: Michael and his angels fought
against the dragon; and the dragon fought and his angels,

Rv:20:2: And he laid hold on the dragon, that old serpent, which
is the Devil, and Satan, and bound him a thousand years,

Rv:20:10: And the devil that deceived them was cast into the
lake of fire and brimstone, where the beast and the false prophet
are, and shall be tormented day and night for ever and ever.

Rv:20:15: And whosoever was not found written in the book
of life was cast into the lake of fire.

> > but christmas and easter were both stolen by the christians
>
> Really, what do trees and presents and easter eggs have to do with Jesus?

Thank you! At least somebody here has their thinking cap on. Christmas is all about Santa, decorating pine trees, and giving presents to friends and family. Without Christmas, many businesses would fail and go bankrupt. Why people have to always push religion into everything is unbelievable. It has gone to the point that Jewish people won't even let their kids celebrate Christmas and see Santa!! As if Santa Claus and present giving is exclusive to the Christian religion or something! I'm an Atheist and celebrate Christmas every year with my family, why the hell can't Jews and Blacks? What the hell is this new black holiday (Qwanza?) the Blacks have to have to further keep themselves separate and segregated instead of joining in and trying to unite into one big melting pot, instead of trying to invent new ways to separate into smaller groups.

Christmas is for EVERYONE! Even Jews like Jack Benny, George Burns (Nat Birnbaum) and Stan Freberg would have Christmas shows and celebrate Christmas!

Religion once again is trying to rip people apart instead of bringing everyone together.

I for one, am not playing part of this new "politically correct" bullshit of having to say "happy holidays" instead of "Merry Christmas". Santa Claus says: "Merry Christmas" and so do I! I hate Christians and religion like everyone else, but that has nothing to do with our Christmas holiday, Santa, decorating pine trees, giving gifts, etc.

I think as soon as everyone else realizes this, we can all join into one big happy group and celebrate the season together, instead of hiding into our little separate groups and sub-holidays.

Celebrate Christmas or DIE!!!

I seem to recall seeing these as well. Maybe it was on Kenwood's site? They have technical bulletins (essentially fax scans of service notes) that might describe these mods.

Christmas with no Christ in it, no thanks I believe
I'll pass on your anti-religious version of the holiday.

>
> Celebrate Christmas or DIE!!!
>

Then let it be death! Would you like to be the one to do me in?
I do want to warn you, I'm not like those meek and mild milk
toast church going types you know. I will fight back so bring your lunch.

Or if you just want to say "no it's not that important to me", then
that's OK too. I'm not going to start any holy wars, but if one
starts on me I'll darn sure finish it!

Just so we understand each other my statement above was
made because of your "Celebrate Christmas or DIE!!!" comment.
I'm not starting any fights, nor do I have a desire to do so either.

This really is basic stuff. You do know don't you that originally it
was a non christian festival and the christians came along and took it
for their own? Even the church accepts this so if you don't, then
you're on your own.

Gentlemen,
first of all, I made a "typo." I should have written 447.620, I accidentally wrote 427 repeatedly. It was too late that evening. sorry about that.
that being said, the problem remains. I cannot get anything other than static on 440 band. On 2m I can hear voices just fine. Could it be that the 440 half of the HT is not working properly?
still awaiting any suggestions.
thanks,
don e N6CLP

Yes I do know all that. It was done because the church
wanted the pagens to stop celebrating their pagen holidays.
They found out that they couldn't stop it so they decided
to adopt the holidays and give them a Christian meaning
so the pagens who converted to Christianity would not
have to stop celebrating 'their' holidays.

The point is NOW it is a Christian holiday and I celebrate it as such.
If you want to celebrate the pagen aspects of this day 'go for it' it
is after all a free country (at least here) to do as you wish with it.
We have Jehovah's Witnesses here that don't celebrate ANY
holidays and we're OK with that too. The Amish here do their
Christmas without any electric lights or anything, that's OK too.

If you want to celebrate the holiday in the pagen way that's fine.
Just don't call it Christmas, it wasn't called that before the
church took it over. Why use a Christian name for a pagen
holiday if you don't believe in God.

Without Jesus there is NO reason to celebrate anything at all!
No Jesus = No God Know Jesus = Know God
It really is that simple.

And the Christian version of the holiday was here
before I was born, sorry. It don't matter to me
how it got here, what matters is what it means
to me now.

I believe in God, I'm sorry you don't. I just want
to know, why you call it CHRISTmas if you
celebrate it in it's pagan form? Why not call it
SANTAmas or YULEmas or Xmas or
WHAT-EVERmas? I think the name Christmas
should reflect the Christian traditions of the
holiday, thats all I'm saying.

Was Jesus actually born today?
By Joseph Farah

Posted: December 25, 2002
1:00 a.m. Eastern

Editor's note: Advance orders for Joseph Farah's long-awaited "Taking America Back" are now being accepted exclusively at WorldNetDaily. The book won't be released in bookstores and at Amazon until February. Get your copy even before the critics.

Today, millions of Christians around the world celebrate the birth of the One they believe to be the Savior of the world, the Prince of Peace, the Son of God &#65533; Jesus of Nazareth.

Jesus is called many things in the Bible. One of His names is the Lamb of God. And while no one is quite sure exactly when Jesus was born, I believe that name may actually lend credence to the birth date of Dec. 25.

I know what you skeptics are going to say. Dec. 25 was chosen by church leaders because it coincided with pagan festivities. It was a way of hijacking those customs and traditions &#65533; a way of redeeming them.

But hear me out. I'm going to tell you why Dec. 25 could well be the actual birthday of the Messiah. First, let's review the most descriptive and familiar of the Christmas stories from the Bible.

There was in the days of Herod, the king of Judea, a certain priest named Zacharias, of the course of Abia: and his wife was of the daughters of Aaron, and her name was Elisabeth.

And they were both righteous before God, walking in all the commandments and ordinances of the Lord blameless. And they had no child, because that Elisabeth was barren, and they both were now well stricken in years.

And it came to pass, that while he executed the priest's office before God in the order of his course, According to the custom of the priest's office, his lot was to burn incense when he went into the temple of the Lord.

And the whole multitude of the people were praying without at the time of incense. And there appeared unto him an angel of the Lord standing on the right side of the altar of incense.

And when Zacharias saw him, he was troubled, and fear fell upon him. But the angel said unto him, Fear not, Zacharias: for thy prayer is heard; and thy wife Elisabeth shall bear thee a son, and thou shalt call his name John.

-- Luke 1:5-13 KJV

The story continues, with Zacharias remaining in the temple and fulfilling his duties as priest. Only after "the days of his ministration were accomplished" did Zacharias return home, where his wife, Elisabeth, conceived, "and hid herself five months."

And in the sixth month the angel Gabriel was sent from God unto a city of Galilee, named Nazareth, To a virgin espoused to a man whose name was Joseph, of the house of David; and the virgin's name was Mary. And the angel came in unto her, and said, Hail, thou that art highly favoured, the Lord is with thee: blessed art thou among women.

And when she saw him, she was troubled at his saying, and cast in her mind what manner of salutation this should be.

And the angel said unto her, Fear not, Mary: for thou hast found favour with God. And, behold, thou shalt conceive in thy womb, and bring forth a son, and shalt call his name JESUS. He shall be great, and shall be called the Son of the Highest: and the Lord God shall give unto him the throne of his father David: And he shall reign over the house of Jacob for ever; and of his kingdom there shall be no end.

Then said Mary unto the angel, How shall this be, seeing I know not a man?

And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee: therefore also that holy thing which shall be born of thee shall be called the Son of God. And, behold, thy cousin Elisabeth, she hath also conceived a son in her old age: and this is the sixth month with her, who was called barren. For with God nothing shall be impossible.

And Mary said, Behold the handmaid of the Lord; be it unto me according to thy word. And the angel departed from her. And Mary arose in those days, and went into the hill country with haste, into a city of Judah; And entered into the house of Zacharias, and saluted Elisabeth.

And it came to pass, that, when Elisabeth heard the salutation of Mary, the babe leaped in her womb; and Elisabeth was filled with the Holy Ghost: And she spake out with a loud voice, and said, Blessed art thou among women, and blessed is the fruit of thy womb. And whence is this to me, that the mother of my Lord should come to me? For, lo, as soon as the voice of thy salutation sounded in mine ears, the babe leaped in my womb for joy.

-- Luke 1:26-44

Notice the details pointing to the approximate time when Jesus was conceived and born.

"What are you talking about, Farah?" you're probably asking yourself.

We've learned that Zacharias was a priest of the course of Abia and that he fulfilled his duties before going home and impregnating his wife. In I Chronicles 24:1-10, we learn that the priestly duties were established about 1,000 years earlier. They included 24 courses and were numbered by drawing lots 12 courses for sanctuary service and 12 for the government of the house of God.

Priests would serve during a month starting with the Hebrew months of Nisan, which can begin anytime between early March and early April. The sons of Abija, the Old Testament spelling for Abia, were in the eighth course, which would mean Zacharias would likely have ministered during the eighth month of the Hebrew calendar, starting as early as the fifth day of our month of October. That would place the likely time of John the Baptist's conception toward the end of October.

Elisabeth then hid herself for five months. Sometime, perhaps, around March 15-April 15, the angel appeared to Mary. For the sake of argument, let's say this happened on or about April 1. A normal gestation period of 270 days would have resulted in the birth of Jesus on or about Dec. 25.

That is a very plausible scenario. Still not convinced? How about this?

Let's go back to Luke, Chapter 2, verse 8: "And there were in the same country shepherds abiding in the field, keeping watch over their flock by night."

Shepherds spent the night in the fields with their sheep when the lambs are born. The mating cycle begins after June 21. The normal gestation period is five months, so the ewes start giving birth in mid-December.

And that's where "the Lamb of God" comes into the picture. Jesus was likened to a lamb who was brought into this world to be slaughtered for our sins. Wouldn't it make sense that He was born around the same time that the innocent little lambs were being born in the fields nearby?

The more I read the Bible, the more I am stunned by such little "coincidences." The Bible is full of them. It makes perfect sense to me. I hope you agree.

Yet, it doesn't really matter exactly when Jesus was born. The important thing today, as we Christians prepare to celebrate that birth, is that He was born that He did come, that He later laid down His life for us and that He will come again.

Merry Christmas to all of you, dear readers. May the joy of His coming be with you today, tomorrow and for all eternity.

 2002

The word is spelt 'pagan' and it doesn't matter to us what the day is
called. Our government has chosen to call it the Christmas break and
that's what we go with. To insist on using some different name would
be childish.....and only the Christians are childish......

lol. if you see people nowadays. it is for gifts. have to be expensive. no one seems to enjoy just getting a gift of anything. it seems to always have to be expensive or somethin. Look at these stores. they thrive on the customers for christmas. It seems to have lost its whole meaning of christmas. Ya I will not be santa anymore after tonight. I will be back to dev. but still.

Dev

I noticed the 'spelling' after I posted it. Just like locking your keys
in your car you see them hanging there just after you have pushed
the door to close it, but always before it shuts. Always 'just' out
of your reach.

I for one on the holiday name game choose to call easter
Resurrection Day because easter (small e) is a pagan
(notice the spelling :) holiday. And yes I do mention that
to fellow Christians BTW. This isn't just one sided against
pagans, I tell it like I see it to the Christian community as well.

Ann you said ".....and only the Christians are childish......"

That is the pot calling the kettle black, we 'as in' the
human race are ALL childish at one time or another.

OK I'll say this I don't believe Jesus was born on December 25, 0000.
They say it was more like in the spring of 4BC, but Dec 25 is when
the world celebrates the day. So who am I to say we can't celebrate it
then because we can't find his "birth certificate" for proof?

The bottom line is I believe Jesus was born, that's the important part
not which day it happened on.

totally fair points,i try to call it Yuletide,but the fact is virtually
everything is geared up towards Christmas.

celebrate how you want,definately,the main thing for me,for any time of the
year is "peace and goodwill" and at Christmas or Yuletide,it is a time to
think of these and not get hung up on your only good if you are a christian.

regards

7498. TS-940 and the point of diminishing return.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-26 04:38:00 UTC
From: Robert Robinson <rob@myexcel.com>
Message-ID: <IIvO9.156182$a8.40056@news4.srv.hcvlny.cv.net>
Source record: 35259

I have a 1987 vintage TS-940SAT. A few years ago I purchased it second-hand for $1000 with the MC-60, SP-940 and the SW-2000. I since purchased the SM-220 and the HC-10 clock...a nice station. It became my main station replacing an FT-101B I keep as a backup.

In 6/2001 the radio stopped working. It would not light up or operate, but it "turned on" because the light in the room dimmed for a split second (not unusual when I turn on something that has a bit of a load).

I sent the radio to Kenwood. They traced the problem to defective parts on the AVR and Control Units. They also replaced the Lithium battery, changed a few lamps, cleaned/lubed the pots/motors, calibrated and realigned the radio. They replaced 2 transistors, a zener diode, an IC, the lithium battery and 2 lamps.

The radio came back looking and working perfectly. Between shipping, parts and repair, it was just over $400.

Just recently I have experienced the same problem as before and I assume that it is a problem with the AVR, PA or control units. I am assuming that it might cost another $400 (maybe a bit less this time) to repair.

I am very happy with the TS-940, but it is 16 years old. I am not a major contester and do not plan on buying something like an FT-1000. I have seen the Yaesu FT-920 available for under $1100 delivered and includes the SP-8 speaker ($160), MD-100A8X microphone ($130), the 6 kHz AM filter ($120) and the FM unit ($63)...basically a complete station.

My quandary...and seeking some feedback...
What are your opinions about again repairing the 940SAT ($1000 purchase, already $400 in repairs and possibly $400 more (when you figure in shipping) or retiring the station for a newer station based on the FT-920, with over $450 in options included.

Happy Holidays,
73 de KB2PSM

I have a 930SAT that is in a somewhat similar state.

The last time it went to Kenwood, the basic message was
"The next time it breaks, sell it for parts."

Since the main problems appear to be alignment related,
decided to buy a service manual and see what I could
accomplish in the hope of making it useful again :-)

If that doesn't work out ... I'll sell it for parts, or sell off
the useful parts (filters, etc. etc.)

Does seem to be a point of diminishing returns once a
radio gets to be 15 - 20 years old ...

Some of us, however, have matured and no longer believe in the sandman, tooth fairy, Santa, Easter Bunny, the boogeyman, and the delusion that there's a god who keeps his eye on every single sparrow. The Hubble telescope hasn't spotted Heaven anywhere, unless it's a black hole.

Naturally, I agree with Ann. And I'm surprised someone like yourself technically-minded enough to earn a ham callsign can believe Ohm's Law, which can be tested and proven, but STILL believe some supernatural god personally handed Moses the Ten Commandments. Or perhaps you pray for DX? :^)

Mate

Believing quotes from the Bible contains about as much truth as an Enron balance sheet is. Both are fabrications to give the plebs something to believe it.

Gee, if its not a Christian holiday then why do we call it Christmas. Did you ever think that the word Christ might be an important facet of Christmas. Why don't we call it Santa Claus Day or Satan Clause Day or whatever.

Let's see if no one respects Bush, then why did a large percentage of Americans vote for him in the last election. Or is it that you are trying to put thoughts in peoples minds again. Not sure what your claim to fame may be but certainly in this world it is isn't President, CEO or much of anything else.

Very well put. Only a fool would refuse the power of God. I find it that Christianity contributed to the widespread improvements and has foretold the current degradation of Western Society. No other religion or nation under those forms of religion has contributed much of anything to the betterment or technological progress seen by the Western nations such as U.S.A., U.K, Germany, France, and many others. It sure hasn't appeared to me that much progress has really been made in the so called Third World states with their religions of Islam, Buddhism, etc.

Another comment. I guess if Christianity didn't exist, then we would live in a much better and more moral world. Or would that be a world ruled by savages, evil, and other degeneracy? It seems to me that the world is moving toward the real of the latter especially when evil exists. Of course, all of these Atheists, Humanists, Socialists, and other individuals think that we would be so much better off without Christianity. As John Adams said about even our Constitution, "We have no government armed with power capable of contending with human passions unbridled by morality and religion . ... Our Constitution was made only for a moral and religious people. It is wholly inadequate to the government of any other

Now tell us, humanists, what part of this don't you understand

I don't call myself a humanist but I understand you very well.

I love the way you talk of Socialism being non christian...doesn't
work that way in the UK. Here, socialism is a political ideology
which has nothing to do with religion. We can keep the two separate
which doesn't seem to be the case for you. Interesting.

Ann

Go with the new deal, Bob. Once stuff starts to become a problem it takes the enjoyment out of using it. Not fun to have to fix it every time you want to use it.

Robert,
I ran a TS-940SAT for many years and also had a couple of AVR
failures (repaired them myself). I discovered the problem was caused
by a ground loop, the result of having the antenna and the radio
grounded at different places.
This particular radio is very reliable so repeated failure of the same
component could have an external cause. If so, it's possible the new
radio could also be damaged.
Just something to think about.
BTW: I've used the 920 and it's a very nice radio.

>$450 in options included.

OK, here's the deal. Your original $1000 cost and the $400 repair are
what is known, in accounting terms, as "sunk costs". This means that
no matter what you do, they are unrecoverable. (We'll ignore that the
radio may have some salvage value if sold for parts.)

So the question you have is do you want to spend $400 (or more,
remember inflation) to fix a 16-year-old "Old Faithful", or spend
$1100 for a (I assume) new unit with a warranty?

Another poster pointed out that you might have some problem external
to the unit that is causing this problem. That is worth checking out
no matter what--you want to avoid this problem whether you get the old
one fixed or buy the new one.

OK, so you find there is no external problem, or you find one and fix
it yourself without great cost. Good. Now the question is back to
"Repair or Replace"? If you have the money, and have no other
pressing or foreseeable short-term need for it, I'd go with buy. If
money is an issue, check out the cost to repair. But don't be
suprised if the cost to repair exceed 50% of the cost to replace.

Hope this helps. A belated Merry Christmas to you and yours.

How about winter solstice celebrations, winter festival,
Brumalia or Saturnalia?

For the first three centuries of Christianity, Christmas
wasn't in Decemberï¿½or on the calendar anywhere. If observed
at all, the celebration of Christ's birth was usually lumped
in with Epiphany (January 6), one of the church's earliest
established feasts. Epiphany, January 6, still marks the
date of Christ's baptism in eastern churchs but in western
churches now marks the arrival date of the Magi. Few eastern
churches continue to celebrate Christ's birth on January 6.

In 336 A.D., Pope Julius declared Christmas on December 25,
after Emperor Constantine had declared Christianity the
empire's favored religion. Writing in 390 A.D., Pope Julius
says: 'On this day also the birth of Christ was lately fixed
at Rome, in order that while the heathen were busy with
their ceremonies, the Christians might perform their rites
undisturbed."

The heathen ceremonies referred to were the Roman festival
of Saturnalia and Brumalia.

Saturnalia

Saturnalia (feast of Saturn), was both a gigantic fair and a
festival of the home. Riotous merry-making took place, and
the halls of houses were decked with boughs of laurel and
evergreen trees. Lamps were kept burning to ward off the
spirits of darkness. Schools were closed, the army rested,
and no criminals were executed. Friends visited one another,
bringing good-luck gifts of fruit, cakes, candles, dolls,
jewellery, and incense. Temples were decorated with
evergreens symbolizing life's continuity, and processions of
people with masked or blackened faces and fantastic hats
danced through the streets.

Roman masters feasted with slaves, who were given the
freedom to do and say what they liked. A Mock King was

appointed to take charge of the revels.

The week-long festival of Saturnalia was immediately
followed by Brumalia.

Brumalia

This is the Roman celebration of the Winter Solstice. In
274 A.D., Emperor Aurelian established December 25 as the
birthday (Natalis) of the "Invincible Sun" (Solus Invicti).
The name comes from bruma and refers to the shortest day
of the year, the winter solstice. The Brumalia celebrated
the return of the sun after the winter solstice, the date
when the day began again to lengthen.

Why is it that Paul does not seem to know a thing about
Jesus' life and never quotes him despite many good
opportunities to do so are presented to him? In fact all of
the epistles are ignorant of the gospels and the Jesus in
them. Was the gospel story a late and fictional creation to
help people understand what the new religion was all about?

Greetings --

And no other religion has such a history of hypocrisy, willful ignorance, intolerance, repression, persecution, torture and organized murder. Have you forgotten such details as the Inquisition, the Catholic Church's tacit support of the Holocaust, the Black Plague (which killed more than a third of Europe's population, largely because the church taught that touching oneself to bathe was a sin)? Have you forgotten the early scientists (Galileo, Copernicus, for example) tried, tortured, or otherwise pressured until they recanted the truth in favor of the church's view? Why else do you think that christians selected the cross, an instrument of torture and execution, as their primary idol/icon?

Organized religion (not just christianity, btw) has always been a tool of a society's power structure to keep the masses down, either via repression or by promising "rewards" in some fictional next life.

Which, although a biblical quote, really has nothing to do with December the 25th.

And to answer the naysaying atheists, yes, the catholic church did decide, rather arbitrarily, to celebrate Jesus' birthday on a day that historians have since concluded unanimously was NOT his birthday!

But I ask them all this: If He is just some made up fairy tale than what is the holiday for? Is it just an excuse to let the bills slide for a month so you can buy a bunch of crap you somehow lived without all year long? Or is it just a good reason to skip work and sleep in? If that's all it is to you, that's OK. It's kinda sad, but if that's what blows your hair back...

For me, it's the one time of year when I can take a break from the daily grind and the holiday madness to thank Him for the eternal gift he gave me and anyone else who chooses to accept it.

And no I'm not preaching here. Whether you choose to believe in Jesus, Santa Claus, the Easter Bunny or nothing at all, that's none of my business. My point is simply that to me, it wouldn't matter what day Christmas happened to be - the meaning is the same. Your mileage however, may vary.

Hi all, i have a problem with my Alinco DX 77 transciever.Sometimes when i speak into the mic i hear my own voice (distorted) coming out of the built in speaker on the rig.It seems to affect the recieved audio too afterwards ....which stays distorted for a few hours after this happens.
My audio out is clear and strong ...i have made qso's during this distortion/feedback.
It's not a howl-around sound...
I am using the supplied fist mic...the rig is grounded...the ATU is grounded . The rig is about 6 or 8 foot away from the power supply and is not near the computer.SWR is a dead needle.I use a Half size G5RV with an RF choke.I have tried a ferrite ring on the mic lead.I run just 10 watts.
This problem just started up one day in the middle of a qso.When a G0 pal of mine tried the rig on 100 watts the problem was 10 times worse !and the distortion lasted 10 times longer.
Sometimes if i switch the rig off and take the wires off the PSU and leave it for a few hours ,it goes back to normal .Any ideas anyone please?
Lee

I wonder if the battery (in the control head) is dead? Some radios behave strangly when their batteries die. I have a 5200 I purchased in 1993 and it works fine. I just sent it to Yeasu to replace some burnt out display bulbs (wonder why they didn't use LEDs?) I also asked them to replace the battery.

Hello all,

I have tried to make a modification to my IC229H
(Donï¿½t know whether there is any difference between European
or Japanese or American Type)
My goal was a frequency extension up to 174 Mc.
I found a modification on www.mods.dk
Did the following steps as described:
Find chip diode D9! (the place for D9 is empty in my IC229H)
Short the next pair of vertical pads to the right!

So nothing has happened, it is still working on 144-146 Mc.
Also a CPU reseting has changed nothing!
Any idea

73s ,happy new year to all ! de Tom, DL2HRF

There have been times when Chinese and Arabic cultures made Western
ones look barbaric, so it seems one can always find a time in history
to suit their particular biases, as you have done.

Also, if you're going to be stupid enough to let Christianity take
the credit for technological progress, then you can also let it take the
blame for the millions of deaths caused by Western countries (WW I and II)
and the technologies they created to facilite death on these scales.
And don't forget that the US (one of your "Christian" nations) is still
the only country to have used nuclear weapons against civilians.

So your argument implies that we should thank Jesus for nuclear weapons,
biological warfare capabilities, environmental destruction, and
rampant greed and consumerism since once you've associated your
western/christian societies with creating the benefits of technology,
you can't now separate them from their destructive consequences.

The bottom line for me, as an atheist, is that while I don't believe the
Jesus story, I most certainly believe that any Christian worth respecting
(and there are plenty) would be embarrassed by your nonsense.

<< I cannot get anything other than static
on 440 band. On 2m I can hear voices just fine. Could it be that the 440
half of the HT is not working properly? >>

Don-

Do you have another Two Meter radio? If so, try transmitting on a frequency
like 147.54 MHz, and see if you can hear the third harmonic on 442.62 MHz.

Does anyone in your area have a Two Meter and 440 repeater linked? If so, you
could talk on the Two Meter input and listen on the 440 MHz output.

Be sure you don't have CTCSS tone decode turned on!

Most modern solid state radios are designed to have a useful service life of
10-15 years, after that the costs of repairs and the frequency of those
repairs goes up at a accelerating pace.
So, I would say it is time to "retire" the old rig and get a new one.
Figure if you get the same service life out of the new radio as you did the
old, your on par.
Note: there are no radios now, nor have there ever been, or will there ever
be, that can last "forever". If you get 10+ yrs of good service, your about
average.

7534. Buzz on MFJ 9420 Xmit

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-26 18:32:46 UTC
From: notmyaddress@see.below
Message-ID: <notmyaddress-2612021133060001@65.19.18.161>
Source record: 35295

Hi,

My 5+ year old MFJ 9420 QRP rig has developed a loud buzz on transmit. I remember reading a thread about this and a simple fix ala replacing a bad capacitor or diode. Can anyone point me in the right direction?

Thanks!

tjf

We don't have to prove anything false. I can't prove that there isn't
a planet made of cheese out there in space but I don't believe it.
It's for you to prove the existence of something and not for us to
prove its nonexistence.

Have you heard of Ockham's razor? Well, apply it.

7536. FT817 QRP Station FS/FT

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-26 19:27:06 UTC
From: VE3TMT <ve3tmt@cogeco.ca>
Message-ID: <8LIO9.38933$L47.5214765@read2.cgocable.net>
Source record: 35307

Yaesu FT817 QRP rig - purchased October 2002
LDG Z-11 Autotuner
Astatic D104M6B microphone
3 internal battery packs - 1 MAHA FNB72 1700mA
- 2 RS 23-331B 1650 mA
1 12V - 5mAH gel cell with split cord for both rig & tuner
All supplied cords & connectors
Pelican 1500 series custom carrying case

PLEASE READ

The radio's original internal battery lead has been replaced with a fused one. The internal battery packs have also had the power leads replaced to match. This modification allows the internal battery pack to be charged when running the radio off external 12V power. I also have the Radio Shack 2 tray charger (# 23-440) that allows two of the battery packs to charge then automatically shut off.

The original manual is suplied, as is warranty card, but I do not have the boxes or shoulder strap. I have the original MH31 microphone, minus the cord. The MH31 contains the Heil HC4 cartridge and the W4RT "One Big Punch" speech processor. However I found the D104M6B still sounds better.

I purchased this gear thinking I would be getting into QRP activity but I just don't have the time. I have decided to go back to HF mobile.

Speaking of HF mobile, in trade I am looking for any of the following...

Yaesu FT100, Icom 706MKII, Yaesu FT900, Alinco DX70TH, anything small, preferrably with a detachable face to simplify vehicle mounting. I previously ran the FT900 in the car and loved it. Would love to get another one. All offers will be considered, but you will only be contacted if I am interested in pursuing the offer further. I have plenty of pictures, so e-mail me direct and I'll send them to you,

Thanks for reading.

of course thirld world countries have not develeoped the US/UK and other western have kept them that way on purpose,god you cant be that stupid

gold/silver/diamonds/platinum/coffee/tea/fruits and all sorts of other comodities where the west have made there fortunes have all come from third world countries,there workers have suffered apartheid/slave conditions,bad health and safety so that some rich bitch can walk down Beverley Hills Boulevard looking pretty.

and you still wonder why several planes flew into buildings last year,dont you understand its your policies that started the whole thing,its war out there started by the US,a country that uses Nucleur weapons/Napalm,cluster bombs and all manner of evil weoponary and then of course thats ok,as long as Saddam Hussein does not hav the same.

OK I'll bite...

First off, arguments about the election outcome aside, since it
was about a fifty-fifty split, using your logic "a large percentage"
voted against him.

Secondly, those that voted for him are, quite frankly, strong evidence
that the educational system teaches very poor critical thinking
skills. They voted for a president:

who sabre rattles against Iraq even though the 9-11 attackers
were from Saudi Arabia

who reduces taxes while ramping up for war

who complains about weapons of mass destruction all the while
feeding the industries that produce them

who tries to get fellow americans to spy on each other

who claims he wants to get government off the backs of business
and has to wage war to distract people from business
corruption fiascos such as Enron

who picks a fight with a concept which is guaranteed to fail
as long as any terror cell survives

who, within a year, squandered world-wide support and empathy
for the US

And this is just the beginning of a longer list. As far as I can tell,
the "my president, right or wrong (except when he's a Democrat)" faction are
either extremely gullible, stupid, or morally bankrupt, or all of
these.

I'm shocked at how the American Flag, which
once stood for freedom and liberty, has been successfully co-opted
by those who would so readily embrace characteristics more appropriate

to a police state. When all is said and done, the current fanatics in power will spend a trillion dollars feeding the military and eroding freedoms rather than spend one cent on asking why the US is so despised by some countries.

no i would want the real people dealt with and with terrorism a normal war is not going to make any differance.

attacking Afghanistan and Iraq makes no differance on world terrorism,good intelligence is a much better weapon

if Saddam has any weapons technology that will leave Iraq,towards another country,i hope that all the billions spent on defencsive radar/sattelite technology etc will see it and then US/UK/NATO or whoever then shoots it down and then that will justify any incursion by those forces into Iraq.

So by letting Saddam alone but keep a close eye on anything leaving Iraqi airspace,something i doubt would happen anyway,we would then have justifyable reason to go in,but we have no reason as yet to go in.

Kuwait/Saudi/China and a load of other regimes,incluiding the new Afhgan regime,have governments as worse as Saddam or pretty damn near.

US have destablised many deomocracies in recent history,either directly or by CIA dirty tricks,so dont tell me they know about democracy in the US,recent history proves to the contrary.

why do people like you asume my thoughts would be differant if it happened in the UK,my principles and beliefs stay the same,if we do go to war,i will do whatever i can to demonstate my disgust,as i did during the Gulf war and Falkland Islands.

voting is not good enough if you are against the war,then block roads/businesses,refuse to pay taxes/go on strike/shout it out to govermnent officials/disrupot live television events.

In my last job before getting the sack,i sent emails to all our companies US customers registering my disgust at US government,i am in the process of setting up a global anti war campaign,based on peaceful but dirsuptive demonstrations.

nothing violent just,violence will make you as bad as Saddam/Bush/Blair,but dont this war happen on the current terms

peace for 2003

Does anyone have any experience with a Mosley "Vest Pocket" dipole
they can share? I have one but don't know anything about it.
Thanks,
Glen

Robert
I had a pair of TS 930 SATs. I no its not the same radio as the 940 but close. Mine started to fall apart in 1998 one problem after another. I loved those rigs. Since then I have a TS 920 and its a nice rig. It has the DSP in it so you really don't have to buy all those filters it if you learn how to operate the DSP. In mine I have the FM board and the AM filter and the rig works quite fine. I have the MD 100 Mic and operate it both on Side band and on AM. It isn't a FT 1000 MP but it is a fine radio. I like the DSP cause of the filtering that that will do for you with out spending all that extra cash. I also like its cross band capabilities as well as its abilities to work repeaters on both 6 meters and ten. It is also menu driven rig and I like that too. It also has a real nice auto notch filter. I hate it though when I forget to turn it off when I go AM. There really aren't A whole lot of things that I don't like about it. One of those are the S-meter. The S-meter is a set of bars that light up. I prefer a needle over the signal strength bar. I also don't like that the rig dosn't will not work well with my audio rack. The audio in the 920 is done digitally then its converted back to analog before it hits the air. I also don't like the fact that the radio leaves the ALC circuit on when I put the radio in the AM mode. If that ALC and the power out in the radio aren't perfect in consideration of each other the rig will backward modulate.
I hope that that will help you.
I wouldn't give Kenwood a dime. In fact I would tell them that they have to fix it again for free. Don't they Warranty their work? BTW 1987 isn't vintage yet.
73 and Happy Nwe Year!!!!!!!!!!!!
Oris

I was listening to the Voice of Russian on December 25, a day that may
or may not be of any signifigance. VOR referred to the day as
"Catholic Christmas."

....
> Saturnalia
> ----------
> Saturnalia (feast of Saturn), was both a gigantic fair and a
> festival of the home. Riotous merry-making took place, and

And many of those fruitcakes are still in circulation. Actually, I
like fruitcake a lot.

No doubt, angry Osirus worshipers will write back, pointing out that
the Egyptian god Osirus was worshiped with evergreens long before
these newfangled Roman festivals came into existence.

I apologize for the reference to the Voice of Russia. I didn't mean to
suggest that I engaged in shortwave listening on a regular basis.

Best wishes.

7553. Radio Stuff for trade

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-26 22:14:23 UTC
From: Oris <orisnospam@dirtball.com>
Message-ID: <3E0B7F1A.2080007@dirtball.com>
Source record: 35314

Hello
I have a FT 920 with the AM filter and FM board. The FT 920 is 100 watts HF + 6 Meters. It has a Auto tuner and the MC 100 Desk Mic. In the deal you will get the technical supplement too (AKA Service manual), as well as the owners manual. I also Have the 3 kW Roller Inductor Antenna Tuner. They are in good shape I will trade both for a FT 990 or a FT 1000. I have been using the FT 920 as a backup rig. Drop me a line so we can work out a deal.
oris@dirtball.com
I have a Icom ICR71A Shortwave receiver that I will trade for a working , Viking Ranger and SX 99 or Hamuland HQ 110. I'm looking for a good AM Ham station. I will trade this Receiver for a good working AM station. I want both transmitter and receiver. I hope to find something to work with my Audio rack.
I also have a Henry Amp 2 KD 5 Desktop, (It needs a new Plate amp meter I have a meter for it just havent put it in yet.)that Ill trade. Two 3-500s 100 in will give you 1250 out, New Caps. I will trade it for a Valiant and a receiver, or full legal output Ham band AM VFO controlled transmitter. This is a pickup trade only. I will be willing to travel 100 miles from Athens GA.
I also have a Hallicrafters S 38 C Shortwave receiver. Its in great shape. It works but I have no idea what its worth. It is a old old receiver. (Make Offer)
I have a MFJ Versa Tuner II and a Roadtalker 40-channel sideband CB radio that somebody converted to 10 meters. It works quite well. I talked to a guy in South America on it. QRPuke! (Make Offer)
I also have a CBS 1000 transceiver. 25 MHz to 29.795 MHz. In 10 kHz steps. I got it at a hamfest in Georgia. I'll trade it for a SX 99 or NC 300 HQ 110 HQ 170 HQ 200 or similar HF receiver.
I have a Kenwood TM-2530A that I used as a 2 meter packet station. It needs a Mic and the light that lights up the liquid quartz dial. The radio works fine and is in good shape. I looking for a good AM transmitter. A Viking Ranger would be a fare deal.
I have a Kenwood TR 7850 This radio I used as the BBS access on 2 meters. It needs a Mic and needs a new lithium battery backup. I turn the radio off and back on it forgets where it was and defaults to 144.000Mhz. Other than that the radio works fine. I want a working AM transmitter. Something like the Viking Ranger.
I have a Kenwood TM 201a. I used this 2 meter radio as sat transmitter. I worked Mirror before it came down. It Needs allot of work. It needs a dial. The Freq. read out is all screwed up. This is a fixerupper. It receives fine and transmits fine. It needs a mic too I will though this in too with either one of the above 2 meter rigs
I have a Versa Tuner II 949c and a Palomar PT 340 tuner tuner that I

would through in too with either one of the above 2 meter rigs. I also Have a Kenwood KDC 1011 mobile CD player that has the plugs set up for a the older fords. I will through it in too with either one of the above 2 meter rigs.
I also have a Behringer Ultra Graph Pro GEQ 3102 31 band equalizer that I will through it in too with either one of the above 2 meter rigs.
Hey thanks for reading
Happy Holidays

Actually in I Cor 15 Paul clearly states:

1 Cor. 15:1-4
Moreover, brethren, I declare unto you the gospel which I preached unto
you, which also ye have received, and wherein ye stand; [2] By which also ye
are saved, if ye keep in memory what I preached unto you, unless ye have
believed in vain. [3] For I delivered unto you first of all that which I
also received, how that Christ died for our sins according to the
scriptures; [4] And that he was buried, and that he rose again the third day
according to the scriptures:

Clearly stating that salvation is dependant upon Jesus Christ and His death
and resurrection.

You have had a lot of fun for a total of $1400 in about 10 yrs! Most guys will buy a new rig for $1500 to $3000 and in a couple of years lose $500 or more looking to buy a newer toy. You can sell the rig you have to someone, knowing they will have to fix it and may have the time and test equipment to do so. Why not offer it for sale at $300 below what working ones are going for, letting the buyer fix it. He saves a lot, fixes it and has a nice rig. $100-150 a year is not too much depreciation on a modern rig that has a lot of bells and whistles that you have enjoyed. I would agree that 10-15 years is about all you can expect from a daily use rig before problems from "component age wear" creeps in. Only the HIGH dollar rigs like the Icom 781, built to milspec with quality components, may last longer with fewer problems. But, ALL rigs slowly die away with time.... That's when you hope to have saved enough for a newer rig to carry you another 7-10 years. Good luck! San K5YY

Are you American Bruce? Does it make you a criminal because there are millions of criminals in the US or wherever you are?

"Bruce Chambers" <bchambers@nospam.cableone.net> wrote in message news:v0ma26qnd99q7b@corp.supernews.com...
Greetings --

And no other religion has such a history of hypocrisy, willful ignorance, intolerance, repression, persecution, torture and organized murder. Have you forgotten such details as the Inquisition, the Catholic Church's tacit support of the Holocaust, the Black Plague (which killed more than a third of Europe's population, largely because the church taught that touching oneself to bathe was a sin)? Have you forgotten the early scientists (Galileo, Copernicus, for example) tried, tortured, or otherwise pressured until they recanted the truth in favor of the church's view? Why else do you think that christians selected the cross, an instrument of torture and execution, as their primary idol/icon?

Organized religion (not just christianity, btw) has always been a tool of a society's power structure to keep the masses down, either via repression or by promising "rewards" in some fictional next life.

Bruce Chambers

One man's theology is another man's belly laugh. -- RAH

If one traces the feasts mentioned in the Bible and the tax periods of the times one finds that Christ was born in September. That aside, many of the pagan holidays were combined with Christian celebrations. The fact that this occurred takes nothing away from the fact that Christ was born and died for our sins.

I have seen a few that claim he was a "mythical" character. He was indeed a real person that walked the planet and is recorded in historical documents. Even if one choices to not believe in the divinity of Christ, to state he never existed is a sign of ones ignorance of the historical facts.

These two excellent looking and performing radios are excess to my collection and needs. They are both in great cosmetic and electrical condition. Immaculate front panels and great looking cabinets.

The FT 707 is a HF xcvr with WARC coverage 100W smaller than a TS 430S. All solid state. Asking $250 plus shipping or trade for ???

The Ten Tec Triton IV is a 200W PEP solid state HF xcvr with no WARC coverage. Asking $199 obo plus shipping or tarde for ???

Looking for a FT 817, IC706MkIIG etc etc. WHat have you?

Thanks,
Tim

No disrespect, but the existence of Jesus is debatable. I have no qualms if you wish to believe that he existed. But there just isn't enough historical data to establish the existence of Jesus with certainty. I'm sure that if you search the Internet, you will find historians debating the point. Given that state of affairs, you would be wrong to call those who do deny the existence of Jesus ignorant. Anyway, to each his own.

I didn't say he didn't talk about Christ. But he doesn't
quote Christ and/or confirm the stories about Jesus' life as

told in the Gospels. It is odd, since Paul appears to be
the architect of the new Christian faith.

So who kept things going during the Dark Ages? Why do you
assume that Christianity is responsible for the development
of Western nations? Why not secularism?

well so WW11 was the US against UK was it,kicking our Nazi asses???????/

bit confusing that

anyway if you mean the help you gave us in WW11,then it was appreciated,although very late in coming,but i beleive we are still financially paying for lend/lease and probably part of the payment is we have to agree with everything the US does now,was that help worth it i ask???

regardless why should the UK support the US inthis futile war,that is going to swell terrorist groups to an unprecedented level.

where were you at all the atrocities since WW11??,many times you were part of those atrocitie,other times because money comes first,if its a country you are financialy involved with then human rights go out of the window.

look at Israel and Saudi Arabia both supported by the US,Saudi has appalling human rights and you dont bat an eyelid,Israel is an illegal country and again you do nothing,Saddam Hussein has kicked your asses for over 12 years now,he keep goading the US on purpose,and you cant even see it,do you think he really cares how many bombs are dropped and how many people get killed in Iraq,remember his outlook is the same as Hitler,you are basically there to suport the state or country,this man has no qualms in killing his own relatives,he will be safe,he will get out of Iraq with no problems and like Ossama Bin Laden and all his followers will stay silent until he finds a way to attack the west with terrorism.

The only evidence that the west has on 911 is some Saudis were involved,but the US does not want upset such an important partner,but would prefer to blame others

as it did with the PAN AM103 bomb in Scotland,they just blame whoever is whipping dog at the time,curntly Iraq,few years time,probably find US business doing really wel in the new free IRAQ,as with that nice little pipeline goin ahead in Afghansistan,good idea installing a pro US president there who jusyt happened to be working for the company involved in the pipeline project.

very clever

I only have one comment.

Obviously I'm not charging enough based on what you had done.

Oh well, I can look at myself in the mirror in the morning.

Of course, John Adams also said that "The first and only
Book deserving of universal attention is the Bible." Other
founding fathers, particular the deists, would disagree with
this.

Speaking on good government, Thomas Jefferson says (in a
letter to Joseph C. Cabell 2 Feb. 1816):
"No, my friend, the way to have good and safe government, is
not to trust it all to one, but to divide it among the many,
distributing to every one exactly the functions he is
competent to." Nowhere does Jefferson mention religious people.

The Roman Historian Josephus writes of the execution of one known as the Christus at the time of Herod and Pilate.

Jesus, the Christus, was a historical figure.

As far as the "Son of God" and His divinity your skepticism is well founded. The early followers of Jesus debated the Messiah [Christus} and Divinity questions for almost 400 years. So, you are in good intellectual company. However, at the General Council of Ephesus [approximately 425 AD] the Christian church, which is the predecessor of Catholic Church, put the question to bed. Jesus is both the Messiah and the Son of God. This is an accepted tenet of Christian Dogma and has been held since apostolic times.

Numerous philosophers of approximately 500 years ago debated the issue. They came to the following argument:

Read the Gospels and decide the answer to these questions:
1) Is Jesus insane ? The data in the gospels dispels that question. He is quite rational.

2) Did Jesus do/claim what he did for fame/ financial gain/ political fame/ etc.? Jesus was and remained poor through his life. He knew that Israel had systematically executed prophets. He knew Rome would never tolerate a 'Jewish' king. So, the answer is He was not following human motivations!

3) Is He is exactly who He claimed to be ? If He's not insane and He's not motivated by 'normal' human ambitions, then what alternative is there except to accept His claim?

All questions regarding the identity of Jesus can be reduced to one of these three questions.

The early history of Christmas is based in the Roman feasts, as described elsewhere. These feasts posed a problem for early Christians. How does a Christian hold and maintain Christian values with all that secular carousing going on? The answer was to give the Christian community a period of celebration that matched the calendar of the Roman feasts. [The old adage: When in Rome, do as ...] The actual birthdate of Jesus is unknown and was arbitrarily chosen for the Janus feasts.

Several years ago the United States Supreme Court affirmed that 'Christmas' is a secular feast in the United States. I can't recall the details of the case or arguments but the conclusion of the court is that Christmas is a secular day. So, the holiday has gone full circle from

secular to religious to secular.

7574. FS: Heathkit HW-100 & HP-23 power supply

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-27 02:34:40 UTC
From: wa8mea@hotmail.com
Message-ID: <8a260fb2.0212261834.6ec2cf59@posting.google.com>
Source record: 35335
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap

For Sale:

VERY, very nice Heathkit HW-100 with new finals & driver. Original paint, original knobs, no dents, no rust. Works great, looks great. Two hand mics. (One is the original Heath, the other a Turner mic that looks like the Heathkit mic.) Price: $149 and I will pay for the shipping & insurance.

Also FOR SALE: A Heathkit HP-23 power supply in good condition with power cord that connects to the HW-100. Price: $95 and I will pay for the shipping & insurance.

I would like these to go out as a set, since they were purchased as a set. However, if the first two e-mails contain one message from a ham who wants the rig ONLY, and the other message from a ham who wants the power supply ONLY...I will split them up. But...the very first e-mail that wants the set will get the set.

If you're short on cash, we can run the transaction through my little ham/swl business using your Visa or Mastercard.

BTW, I do have a W7FG Vintage Manual for the HW-100 if you're interested. Price for that is $29 shipped.

I used the grid dip meter to set the resonance of the PI output section, so when both the tune and load capacitors are fully open (disengaged) that it dips at 52MHz, with all 3 - 6KD6's installed, and no HV applied, attached to a 50 ohm dummy load.

I still am only getting about 10 watts output, with 10 watts drive.

I'm thinking that 6KD6's just won't work at 50Mhz......

For Sale: MINT MFJ-9406 six meter transceiver. This rig is an absolute blast! Hate to get rid of it, but have a new FT-847 with six meters on it. Great transmit audio! 12 watts PEP or CW. Worked a lot of stations locally, statewide & DX using a little three element Yagi and a TV rotor. CW module installed. Comes with original box, manual, hand mic and DC cord. $169 and I will pay for shipping via PRIORITY MAIL and insurance. If you're short on cash, we can run the transaction through my little ham/swl business using your Visa or Mastercard. First e-mail gets it!

Software will not allow 53MHz frequency input to be programmed into the mode. The software gives me an "out of band" indication and the input block goes "BLANK". 29.6MHz frequency the software gave an indication of "Warning: Frequency out of normal operating range" however, the frequency stayed in the input block and was finally accepted. Is there a trick to this to get the X9000 into the ham bands?? tnx Jim W5RM

I have three of these radios, with good batteries and original rubber duck antennas.

One includes a BC-72 drop-in charger, CP-12 DC car adaptor, BP-84H 7.2V 1700mAh pack and BP-90 pack for 6 AA cells $125 for this one.

One includes a BC-72 drop-in charger, CP-12 DC car adaptor, MAHA MH-BP-83 7.2V 1700mAh pack and W&W 7.2V 850mAh pack. $125 for this one.

The third includes a BC-74A wall charger, Periphex BP-84 7.2V 1700mAh pack and a BP-85 pack. I don't have a DC charger or adaptor for this one. $105 for this one.

All batteries are good, several are recently purchased. All prices include USPS Priority mail shipping. Insurance of $2.20 is optional.

I will probably have more ham equipment for sale in the near future, so keep an eye out.

The e-mail is good.

Also open to trades for ?? One thing I am looking for is a Yaesu VR-500.

Dave Shrader wrote:
> The Roman Historian Josephus writes of the execution of one known as the
> Christus at the time of Herod and Pilate.
>
> Jesus, the Christus, was a historical figure.
>

There are no surviving Roman records of the First Century
that refer to, nor are there any Jewish records that support
the accounts in the Christian gospels --- except one:
Josephus', which was published in 93 A.D. It was a history
of the Jews. While discussing the period in which the Jews
of Judea were governed by the Roman procurator Pontius
Pilate, Josephus included the following account:

About this time there lived Jesus, a wise man, if indeed one
ought to call him a man. For he was one who performed
surprising deeds and was a teacher of such people as accept
the truth gladly. He won over many Jews and many of the
Greeks. He was the Messiah. And when, upon the accusation of
the principal men among us, Pilate had condemned him to a
cross, those who had first come to love him did not cease.
He appeared to them spending a third day restored to life,
for the prophets of God had foretold these things and a
thousand other marvels about him. And the tribe of the
Christians, so called after him, has still to this day not
disappeared.

This account has been embroiled in controversy since the
17th century. It could not have been written by a Jewish
man, say the critics, because it sounds too Christian: it
even claims that Jesus was the Messiah!

The critics say this paragraph is not authentic. It was
inserted into Josephus' book by a later Christian copyist,
probably in the Third or Fourth Century. Modern writers
suggest that Josephus' account was instead derived from a
Jewish-Christian "gospel" that has since been lost.

In any case, it would appear that Josephus' passage is
nothing more than recital of Christian belief, not a record
of a historical event. For example, elsewhere, Josephus
tells us quite unequivocally that Jews inherited the "Wisdom
of Solomon" and therefore were especially adept at
miracle-working and cures. Josephus tells the story of how

King Solomon himself told how to perform healings. Josephus
describes Eleazar, an exorcist and one of those descendants
of Solomon's techniques: "[I] have seen a certain man of my
own country whose name was Eleazar, releasing people that
were demoniacal in the presence of Vespasian . . . He put a
ring that had a root of one of those sorts mentioned by
Solomon to the nostrils of the demoniac, after which he drew
out the demon through his nostrils; and when the man fell
down immediately, he abjured him to return into him no more
. . . when Eleazar would pursuade and demonstrate to the
spectators that he had such a power, he set a little way off
a cup or basin full of water, and commanded the demon, as he
went out of the man, to overturn it, and thereby let the
spectators know that [the demon] had left the man."
(Antiquities 8.2.5)

Bottom line is you can't bet the farm on Josphesus.

Huh? Exactly what is meant by 'normal' human ambitions?
Even Bertrand Russel critized Christ teachings as told by
the gospels. As far as "His claim", why is that the only
other alternative? [I'm not crazy and I'm not greedy,

therefore, I am the son of god. It doesn't follow.]

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-27 04:42:11 UTC
From: VE3TMT <ve3tmt@cogeco.ca>
Message-ID: <wTQO9.39231$L47.5259366@read2.cgocable.net>
Source record: 35343

Yaesu FT817 QRP rig - purchased October 2002
LDG Z-11 Autotuner
Astatic D104M6B microphone
3 internal battery packs - 1 MAHA FNB72 1700mA
- 2 RS 23-331B 1650 mA
1 12V - 5aH gel cell with split cord for both rig & tuner
All supplied cords & connectors
Pelican 1500 series custom carrying case

PLEASE READ

The radio's original internal battery lead has been replaced with a fused one. The internal battery packs have also had the power leads replaced to match. This modification allows the internal battery pack to be charged when running the radio off external 12V power. I also have the Radio Shack 2 tray charger (# 23-440) that allows two of the battery packs to charge then automatically shut off.

The original manual is suplied, as is warranty card, but I do not have the boxes or shoulder strap. I have the original MH31 microphone, minus the cord. The MH31 contains the Heil HC4 cartridge and the W4RT "One Big Punch" speech processor.

I purchased this gear thinking I would be getting into QRP activity but I just don't have the time. I have decided to go back to HF mobile.

Trades??

I have an IC-706 MK II HF/6meter/2meter mobile/fixed station rig.
This radio is in very good condition with separation kit, Heil headset boom mic, stock mic, Mountain Ops Tac-Pac travel carrying case (orange), manual and box.
I am asking $550 and I will ship anywhere in the USA.

Please respond to duanek7zh46@cs.com

The majority of the US population are mindless followers and vote by belief in the Democrat or Republicrat parties that they are both good respectively. Both parties are nuts and not to be trusted. A real person will investigate/self-educate about each candidate to a reasonable level to make the best decisions, regardless of party lines.

Do NOT blindly trust MBE to know how to pack heavy items. Some may, but my one experience with them was NOT a happy one. Things arrived damaged & even then it was in better shape than the packing deserved. My opinion is that they only know how to pour in foam peanuts & that just doesn't cut it for heavy &/or one of a kind gear.

wrote:

> Why call something by it's Christian name if you don't believe in the
> God of the Christians?

Because that's how the English language works: it keeps old words but constantly tinkers with their meanings. Why call something "electronics" when it has nothing to do with amber? In this case Christianity brought the confusion on by its own propaganda, relabeling a pagan festival but never successfully changing its essence (study real history).

Besides, what is the "God of the Christians"? The paradoxical God of the Eastern Orthodox? The Roman Christian God of political hierarchy? The American fundamentalists' supernatural alpha male? Lutheran theologian Paul Tillich's "Ground of Being"? There are lots of possibilities: Christianity has a deep, long, and complex history. The dumbed-down Christianity of American Sunday School covers only a tiny fraction of this. I personally think Tillich was on the right track here. It's hard to be an Atheist if you accept his definition...

See below for adjusted prices:

I have three of these radios, with good batteries and original rubber duck antennas.

One includes a BC-72 drop-in charger, CP-12 DC car adaptor, BP-84H 7.2V 1700mAh pack and BP-90 pack for 6 AA cells $105 for this one.

One includes a BC-72 drop-in charger, CP-12 DC car adaptor, MAHA MH-BP-83 7.2V 1700mAh pack and W&W 7.2V 850mAh pack. $105 for this one.

The third includes a BC-74A wall charger, Periphex BP-84 7.2V 1700mAh pack and a BP-85 pack. I don't have a DC charger or adaptor for this one. $90 for this one.

All batteries are good, several are recently purchased. All prices include USPS Priority mail shipping. Insurance of $2.20 is optional.

I will probably have more ham equipment for sale in the near future, so keep an eye out.

The e-mail is good.

Also open to trades for ?? One thing I am looking for is a Yaesu VR-500.

The foam peanuts are easy to use, but not as robust as either
cut/premolded pieces of high density foam or the foam in place stuff.

Look at what manufacturers do. While they want to minimize the cost of
packaging materials, they are also well aware of how expensive it is
to handle returns on damaged equipment.

High density, fragile devices need more packaging than bubble wrap or
peanuts. You cannot depend on an item to be handled gently through
shipping.

Happy trails,

It would be futile to petition our government (Canadian) to
change the name. No Cdn politician would champion that
cause. We can't even get the government here to consider
abolishing the Monarchy (and it's Cdn representives) and the
Senate. (These institutions must have ties to "God"! LOL.)

You might want to get an estimate before making up your mind on the proper course of action. The same sympton can have different root causes and it might be quite inexpensive to fix.

What's wrong with the pagans taking the holiday back from the Christians? I guess it's OK for Christians to take over pagan holidays, but not the other way around.

The date of Dec. 25th isn't the only thing that appears to have been stolen from other religions by Christianity.

This was found on another forum, posted by someone who collects and reads ancient religious texts:

Your god is a stolen concept this is not an opinion, or a belief. This is a verified, proven, FACT. Therefore, if your religion is to have any truth at all we would have to look to one of the pagan religions that it is made up of. You quote the bible as if it is some kind of authority? The FACT is that the same amount of truth can be found in a Spider-man comic book, and there is more proven truth to the Iliad which is KNOWN to be a work of fiction, than there is to your bible. The sad fact is Scrawny that the creators of your religion were not prophets, or apostles, or disciples. They were thieves, yes thieves, who stole the literature of civilizations that were truly enlightened, and wove it all into one fantastic story. Would you like to know how many "Jesus" characters there were prior to your christ (or as I like to call him "compilation christ"), well here is a list:

Adad of Assyria
Adonis, Apollo, Heracles ("Hercules") and Zeus of Greece
Alcides of Thebes
Attis of Phrygia
Baal of Phoenicia
Bali of Afghanistan
Beddru of Japan
Buddha of India
Crite of Chaldea
Deva Tat of Siam
Hesus of the Druids
Horus, Osiris, and Serapis of Egypt, whose long-haired, bearded appearance was adopted for the Christ character
Indra of Tibet/India
Jao of Nepal
Krishna of India
Mikado of the Sintoos
Mithra of Persia
Odin of the Scandinavians
Prometheus of Caucasus/Greece
Quetzalcoatl of Mexico
Salivahana of Bermuda
Tammuz of Syria (who was, in a typical mythmaking move, later turned into the disciple Thomas)
Thor of the Gauls

Universal Monarch of the Sibyls
Wittoba of the Bilingonese
Xamolxis of Thrace
Zarathustra/Zoroaster of Persia
Zoar of the Bonzes

As you can see this is a pretty extensive list, and I guarantee doing a little research on any of these characters just may shake your beliefs. Here's an example,

"With five loaves at the same time, and with two fishes, He shall satisfy five thousand men in the wilderness; And afterwards taking all the fragments that remain, He shall fill twelve baskets to the hope of many. . . .He shall still the winds by His word, and calm the sea as it rages, treading with feet of peace and faith. . . . He shall walk on the waves, He shall release men from disease. He shall raise the dead, and drive away many pains. . ."

Does this sound familiar?
It almost exactly matches a similar quote from the bible, I'm sure you are familiar with it.
Well this particular quote comes from the "Sybilline oracles", and was a prophecy of the coming of Horus, son of Osiris, of Egypt. That was about 1,000 years before christ. Here are some other similarities between Horus and your plagiarized hero christ.

Horus was born of the virgin Isis-Meri on December 25th in a cave/manger, with his birth being announced by a star in the East and attended by three wise men.

He was a child teacher in the Temple and was baptized when he was 30 years old.
(According to the bible wasnt jesus the first baptism ever? Then how could the Egyptians have wrote about it thousands of years before christ?)

Horus was also baptized by "Anup the Baptizer," who becomes "John the Baptist."

He had 12 disciples.
(Now this is getting wierd, it's almost like jesus stole this guys life or something)

He performed miracles and raised one man, El-Azar-us, from the dead.
(Hey didnt jesus raise some dude named Lazarus too? Oh no that guys name was Elazarus maybe it's not the same person... Sure it's not)

He walked on water.

Horus was transfigured on the Mount.

He was crucified, buried in a tomb and resurrected.

He was also the "Way, the Truth, the Light, the Messiah, God's Anointed Son, the Son of Man, the Good Shepherd, the Lamb of God, the Word" etc.
(really, so this god had all of your god's nicknames THOUSANDS of years

before he did, but you still probably think your little jesus fairy tale is true, well the list goes on)

He was "the Fisher," and was associated with the Lamb, Lion and Fish ("Ichthys").

Horus's personal epithet was "Iusa," the "ever-becoming son" of "Ptah," the "Father."

Horus was called "the KRST," or "Anointed One," long before the Christians duplicated the story.
(Hmm, KRST/Christ probably just another coincedence, right?)

In fact, in the catacombs at Rome are pictures of the baby Horus being held by the virgin mother Isis - the original "Madonna and Child" - and the Vatican itself is built upon the papacy of Mithra, who shares many qualities with Jesus and who existed as a deity long before the Jesus character was formalized. The Christian hierarchy is nearly identical to the Mithraic version it replaced. Virtually all of the elements of the Catholic ritual, from miter to wafer to water to altar to doxology, are DIRECTLY taken from earlier pagan religions.

If you want to take over the holiday that's fine with me. Just don't
call it by it's Christian name. The Christians took over easter and
keep calling it by it's pagan name and I don't care for that either.
I call it what it is to the Christians, Resurrection Day if the pagans
want to celebrate easter that's ok too.

Why call something by it's Christian name if you don't believe
in the God of the Christians?

>
>I'm thinking that 6KD6's just won't work at 50Mhz......

If 6146s will (and they do) all the way to 2m so will 6KD6.

They will. The problem is that the pi section output has too much
stray capacitance at 6m or your using far to much coil. I know it
works because I helped someone years ago with one.

Several hints. Use a tuned input to the cathodes, gives better
IMD and match to the exciter. Either a PI section or a variation of
a link tuner will do there. Look at the existing designs that are
now dated. A good source is OLDER (pre 1974) Radio Amatuer
Handbooks or VHF manuals.

Note if the PI output resonates at 6m then it's way off. Try cutting
off about half the coil and see what happens. If this is a "CB amp"
and you havent reduced the pi coil then it WILL NOT work. As the
purpose of the putput section is harmonic reduction (27x2=54!!!) and
matching the somewhat high impedence plates to the 50ohm coax.

Now, your getting it!
The sweep tubes have 0% plate effiency at 50Mhz.
10w in, 10w out = 0% gain.

Simply because it's a common point of reference. Why do
Christians recognize unmistakeable pagan symbols such as the
Easter bunny and Easter eggs?

The shift key trick should work. If not, I seem to recall that
Batlabs has some info (or links to info) on tweaking the software's guts
to go out of band.

...but what's in a name? It's what we do that matters. I mean the
Christians have Christmas trees and then Easter eggs and Easter
bunnies....none of it is religious. It's all just a bit of fun. The
Christians can celebrate the festivals the way that they want to as
well, by going to church or whatever. Seriously, there's room enough
for everyone to do what they like and it really doesn't matter what
the name of the day is called....does it?

Well what a surprise - a troll that changes her spots to sneak past my plonking. It's not enough to disagree with me, no you need to make sure I see it. How typically juvenile. You and John Mackey would make a great couple.

back you go... plonk.

Nope. The ouput section is lowpassing all the RF away.

I have a Courier MDL-100 (OLD CB linear) using two 6KD6s
and with the coil trimmed 4 Watts carrier yeilds a nice 38 Watts (75w
pep) output when loaded correctly for SSB use. For CW I can push that
harder but that 38watt level is for clean signals.

Sweep tubes were widely used for inexpensive amplifiers up to 6m
with fair results. The IMDs were sometimes poor is not done right.

Same reason they use the church as a gossip hall or a place to pick up women. They're human. Most people who call themselves Christians act like the rest of the world does 6 days a week. I'm no saint either, but I do try (when I catch myself doing wrong) to improve myself and try to treat people the way He would - not easy, especially when certain people really ask for it.... That's the beauty of accepting the gospel - I don't have to be perfect, because He was in my place. (Lucky for me, let me tell ya...)

But hey - it's not for everyone and that's entirely up to you. To each their own. I'm not here to try to convince you of what you should or should not believe. Some Christians have cited biblical reasons to me why I should, but I prefer to quietly respect everyone's right to choose for themselves.

Now, on to scanning! The wife just cleared the purchase of a PRO-95 on the way home! (I had to promise her a new jacket too - hope she doesn't want mink... LOL)

I am Looking for Rex Bassett 75 meter mobile coils. These were sold by Bassett and then by Savoy
Electronics in Florida (1955 to 1975 or so). They are vacuum sealed and filled with helium. I am looking for 1 or more.

Please price and condition in an e-mail direct to me.

Thanks

Dave K4JRB

Most of the old ARRL designs have a tuned input, but are coming in one of
the grids, rather than the cathode.

A PI section is EZ enough, what should I be using for values?

> Look at the existing designs that are
> now dated. A good source is OLDER (pre 1974) Radio Amatuer
> Handbooks or VHF manuals.

I've got a few ARRL manuals from 1967, 1969 and 1978, but haven't found one
with a tuned input coming in the cathode.

> Note if the PI output resonates at 6m then it's way off. Try cutting

Yes, this was an 11M amp, taken out of service by me, a license ham (KB9WMJ).

The original coil was about 6 turns of #14, on 3/4" diameter. I removed it, and am using 2.5 turns #10 solid on 1.5" diameter stretched out to about 3" long. As I said it's resonant at 52 MHz with both tuning caps wide open. I shortened all the leads, and am going right from the top of the plate RFC right to the tune cap with a .01 uF cap (maybe 1/2" leads), right to the PI coil (no leads), right to the load cap (no leads) to a piece of RG-58 (1/2" leads), which goes down to the TR relay. The plate leads on the tubes are a little longer than needed, so I could shorten them.

I wonder if the small beads (RF Chokes) on the plate wires are affecting this any? They are really tiny (1/4" diameter).

Where should the PI network be resonant?

Just for kicks, I removed the 6KD6's, and replaced them with 6JS6C's (lower output capacitance 10 pF) . I was able to get 80 watts output, with 10 watts drive (FM), but it acted funny.

When I would first key up, the output power would be low, say 10 to 15 watts, with 10 watts drive. As I left it keyed, the output power would slowly increase to about 80 watts after about 10 seconds. If I un-keyed, and then immediately keyed up again, the power would start at 10-15 watts, and slowly move up to 80 watts (in about a second). If I left it alone for a minute, and keyed, then the power output would be low (10-15W), and go up to 80 in about 10 seconds.

Really weird, and the plates were not red, HV was constant, input power didn't change, but plate current would increase as power output increased. I thought that perhaps I had a bad tube, so I replaced them with another set, with similar results.

I really think I'm getting somewhere with the 6JS6's, so maybe a tuned input will help.

I'm glad to hear that the 6KD6's will work at 50 MHz. That answers one of
my original questions.

>> official said."
>> Simple but sad. Through the miracle of petroforming, competing energy
>> sources aren't as versatile as petroleum. They even invented a word
>> for it. Johnson says,
>> "They're not what the industry calls 'fungible,' meaning they can't be
>> used for a wide spectrum of applications".
>> Like producing our food.
>> The bad news is though, when the oil supply ultimately fails, absent
>> alternative technologies, the world's food supply will go with it. But
>> when it comes to developing alternative technologies though, in a
>> government controlled by former oil company kingpins, Johnson quotes
>> George Sterzinger, Executive Director of the Renewable Energy Policy
>> Project, as saying "policies don't move in that direction."
>> Too bad.
>> Kaku says,
>> "Even an advanced civilization is bound by the laws of thermodynamics,
>> especially the Second Law, and can hence be ranked by the energy at
>> their disposal."
>> In reality, because there is in only a dwindling supply of energy that
>> can be sucked from the well, absent an alternative, we will be living
>> in an "energy limited economy". Hanson offers this definition,
>> <http://dieoff.com/page185.htm>http://dieoff.com/page185.htm
>> "An 'energy-limited economy' is one where more energy cannot be had at

>> any price. The global economy will become 'energy-limited' once global
>> oil production peaks."
>> And that could happen soon but when it does, whenever it does, it
>> could mean more trouble than just lining up at the filling station.
>> Consider the problem facing agriculture. Hanson points out,
>> <http://dieoff.org/page185.htm>http://dieoff.org/page185.htm
>> "Food grains produced with modern, high-yield methods (including
>> packaging and delivery) now contain between four and ten calories of
>> fossil fuel for every calorie of solar energy."
>> Hanson adds,
>> "It has been estimated that about four percent of the nation's energy
>> budget is used to grow food, while about 10 to 13 percent is needed to
>> put it on our plates. In other words, a staggering total of 17 percent
>> of America's energy budget is consumed by agriculture!"
>> Again citing other sources, Hanson states,
>> "By 2040, we would need to triple the global food supply in order to
>> meet the basic food needs of the eleven billion people who are
>> expected to be alive. But doing so would require a 1,000 percent
>> increase in the total energy expended in food production."
>> Following the peak of oil production, absent an alternative, Hanson
>> notes,
>> "It will be physically impossible -- thus economically impossible --
>> to provide enough net energy to agriculture"
>> Hanson adds grimly,
>> "Obviously the death sentence for billions of people has already been
>> issued".
>> The Type One Club
>> The once and future lords of the realm, now stocking their counting
>> rooms with the gold from our pockets and soon they hope from the black
>> gold from beneath the oil fields of Arabia, may plan for survival long
>> enough for them to bear witness to a coming die off. The demand for
>> life sustaining resources will ultimately be balanced by the supply

Nor is it rec.netcop

It IS alt.os.windows.xp also, though you failed to mention it. I guess this
is topical for that group...

And hey watch it - BOZO is a friend of mine..

>leads), which goes down to the TR relay. The plate leads on the tubes are
>a little longer than needed, so I could shorten them.

Should resonate to about 70 mhz region with the caps unmeshed.
Note the one closest to the plate tunes the circuit, the second near
the antenna helps translate the match.

>I wonder if the small beads (RF Chokes) on the plate wires are affecting
>this any? They are really tiny (1/4" diameter).

They are required. One of the funnies with tubes (general) is they
can take off at their self resonant frequency (usually around 70mhz)
and put all manner of spurs out. The bead or more commonly a 2-5 turn
coil aound a 25-200ohm 2watt resistor is used to snuff the parasitic.

>Just for kicks, I removed the 6KD6's, and replaced them with 6JS6C's (lower
>output capacitance 10 pF) . I was able to get 80 watts output, with 10
>watts drive (FM), but it acted funny.

Humm... suggests either a parasitic oscillation or plain unstable.

>Really weird, and the plates were not red, HV was constant, input power
>didn't change, but plate current would increase as power output increased.
>I thought that perhaps I had a bad tube, so I replaced them with another
>set, with similar results.

Could also be the exciter alc/swr protection is doing you funnies.

One bad tube would result in low output not a gain =1.

>I really think I'm getting somewhere with the 6JS6's, so maybe a tuned input
>will help.

They may. The problem I found is not all of those "CB" linears were well designed. One I scrapped was so poor it failed any resonable stability test on 27mhz into a dummy load. Another I also canned had used tubes that connected the plate leads through the socket rather that plate cap, the effect was it made a great oscillator on 27, 52 and 70mhz at the same time! Many of the CB designes were pretty poor. The Courier I have is one of the better examples, you can fine the scematics in the net (look for ML-100 or BL-100 One is 12v mobile www.cbtricks.com) The used the 12JS6 (same as 6js6) and were definately a great way to hit 100w input for legit 10m use and with a little effort 6m too.

>my original questions.

Yes my ML100 has 6kd6s as I had them and the 12 js6s were fried. So
minor rewire and off and running.

Another mod, add a 1 to 10 uH choke from the filliment supply to the
tube to keep the RF from trying to go bak in to the supply. At 10m
it's less a problem but a good thing to do. With the filiment to
cathode capaitance being more significant at 6m the chokes will
allow the filliments to be at rf with the cathode (lowers drive
requirements and improves match).

FYI, offline email is ok at KB1GMXnospam@nospamarrl.net
Remove the words nospam to make the address work.

If you want to do some real power consider a pair of 4cx250s
running very conservitively at about 500-600watts input! Bit more
work there.

> with a little effort 6m too.

I've seen the Courier BL-100 schematics, and was amazed by the input circuit. There wasn't even any isolation, the antenna lead is connected directly to the Cathode.

Many CB amps were designed around the 6JG6, which was a sweep tube, where the plate was not on a cap, but came back down to the base. There had to be considerable interaction between the input and output.

The unit I'm playing with is a Kris Mach 4B. This is a relatively unknown amp, as it was not put into production by Kris. I happen to have the original prototype, plus 2 pre-production units. It looks well designed, and setup. Even better than their previous models. The power transformer is massive, and just loafing at these power levels.

These were obviously designed for 11M use, as there are 4 tubes, 1 driving 3. I have bypassed the first stage, and have been playing with just the 3 tube portion of the amp. The units work very well on 10M, but I thought it might be nice to convert one to 6M use. I thought all I'd have to do was change the coil on the PI network, but this has turned into a bigger project.

I don't have my heart set on making this conversion work, as I have rigs that will put 100W out on 6M, which is more than adequate.

I hope your Pro-95 is a lot better than my Pro-94 was. It had a front end
so wide that when the hospital 15 miles away paged on their frequency
the Pro-94 would stop on WHATEVER frequency that was up next and
the squelch would open (even turned all the way up) and in would come
"housekeeping 3 4 0 housekeeping 3 4 0"! Other than that it was a real
nice scanner.

Not sure there is anything for the FT-5100, nothing from Yaesu or RT
Systems is listed.

For Kenwood, they provide the software free, so no other sources.
http://www.kenwood.net/index.cfm?do=SupportFileCategory&FileCatID=3

I'm sure the documentation included mentions the cabling, which is
likely something you could readily make.

Most programming will require a traditional serial port on your PC.

Happy trails,

On the keypad you'll find above digit 3 the text CTCSS. This enables PL on RECEIVE and TRANSMIT.
On the keypad you'll find above the * key the text TONE. This enables PL on TRANSMIT only.
On the keypad you'll find above digit 6 the text TONE SEL. This selects the PL tone frequency.

When programming the radio, you want to get the correct tone frequency (via the TONE SEL button) and only want it on transmit (via the TONE button). When you're finished, you should see the letter "T" in the display. If you see the letters "CT" instead, you must have pushed the CTCSS button which enables receive PL. Push this one again to get rid of the "CT", then push the TONE button to get just the "T".

It goes without saying that to perform any of these settings you push the "F" (function) key first.

There is a PDF file of the user's manual on Kenwood's web site.

Actually, there is no doubt that a Man named Jesus existed (there are
many named that in Mexico presently), but he was only one of many
so-called "miracle workers" that lived back then.

There is a version of software for the X9000 called "Special Ham
Version 5.02.00" that will allow any and all amateur frequencies to
be programmed into an X9000 - it works just fine.

Hi Rob,
Given the age, and at some point some
parts wil not be available any longer, and
the options you had that still have some
significant value, even if you sell the
940 as a parts radio for $300-500, you
may only need a few hundred more $$
to purchase the new radio. Those options
you had are probably worth $400-500
by themselves. Probably a lot less than
you paid for them, but most of them won't
match or be needed for the new radio.
Have fun with the new radio...

Hi Sam,
As others have noted, care should be
taken as a lot of the modern rigs cannot
switch the 120V relay in the SB220 and
you end up with a fried relay in your
920. If you don't have it in the SB220 (it
would be a mod either you or a previous
owner would have to have installed as an
aftermarket item), it is an cheap thing
to buy and easy to put in.
Also, in case of swr, you shouldn't need
a tuner in between the radio and amp,
but... if you check the Richard Measures
website (a guru on the sb220), you will
read that modern (solid state)radios may show a less than perfect swr, and he
gives mods you can do to make the swr better.
The Richard Measures website has the
soft key mod for sale, and also some
other worthwhile modifications. See his
website at : www.vcnet.com/measures

Good luck.

These Motorola modified software programs are usually called "Lab"
software, and are quite hard to find. Motorola considers their possession
theft of their internal company software. Good luck in finding it.

They don't *have* to be SMD, do they?
It's not a pacemaker, nor a hearing aid.
I've used plain ol' glass body diodes in these situations -- with
careful, and appropriate, forming of the leads. Pre-tin the very
tips (that you have smashed into flat 'feet' with your flat-faced
needle-nose pliers) before soldering in the circuit.

It's ugly. I add DC bypass and a tuned input to get the SWR to under
1.2:1. Chokes in the filliment leads to float them and tweeked the
pi-network values. Runs comfortably at 6 but since I have a tentec
6n2 at 20w the two sweep tubes are just not enough to make any real
big difference (100w class). I needed at least three sweep tubes to
get to 10db gain (200w region) to make sense and they would not fit
the BL100.

>Many CB amps were designed around the 6JG6, which was a sweep tube, where
>the plate was not on a cap, but came back down to the base. There had to be
>considerable interaction between the input and output.

Many were so poor as to be a criminal offense from just the design
standpoint. And the solid state ones most ran class B at best...
splatter and spurs.

>The unit I'm playing with is a Kris Mach 4B. This is a relatively unknown

They were going to do the 10m market then the FCC changed the rules
and made it near impossible to sell it legally.

>These were obviously designed for 11M use, as there are 4 tubes, 1 driving
>3. I have bypassed the first stage, and have been playing with just the 3

>change the coil on the PI network, but this has turned into a bigger
>project.

Look for "The Mini Lini" Wilson Hoag QST april 1982 a two tube sweep
tube linear. The input and putput networks he used may work better
for you.

Not to dismay, I did my first 38 states and 4 countries on 6m using
only 5W homebrew SSB and a two element beam at 20ft. In the spring a
used 30ft Rohn25 tower and 3 elements goes up.

Bob M,

thanks for the explicit instructions.
My radio already shows the T in the display, and does NOT show the "CT".
Therefore I believe that I have programmed it properly. It also shows 447.620
with a minus (-) sign just after it, and when I press the xmit switch, the
number changes to 442.620
I think I've done it right. Perhaps the audio doesn't work in the 440 band? I
am totally stumped by this.
Again, many thanks for your help.

7668. Z-Match - Help Please (with links to photos)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-28 22:31:40 UTC
From: "Neil (G1TZC / M3TZC)" <g1tzc@cheesefamily.plus.com>
Message-ID: <IDpP9.6963$4k6.594094@wards>
Source record: 35179

Thank you for reading this post.

I am having a problem with a Z-Match that I have purchased second hand. The VSWR will not come down correctly on any antenna.

I have taken some photo's of the offending item and hoped that someone could take a look, to see if they can see something obvious.

The images are around 400K each.

http://www.cheesefamily.plus.com/zmatch1.jpg

http://www.cheesefamily.plus.com/zmatch2.jpg

http://www.cheesefamily.plus.com/zmatch3.jpg

I have removed the front panel. Looking at zmatch one the 10/15/20m antenna connection is on the left and the 40/80 connection is on the right. The connection to the TX is below the 40/80 connection.

I know this is a long shot, but I haven't been able to find any circuits or information about this unit.

Thanks for any help that anyone can offer.

Regards,

Neil

Kenwood TS-870S in superb condition. Has both the high stability oscillator and Digital Recording Unit (voice keyer) installed. Also including the MC-60A desk microphone.

I am the second owner (bought it five years ago) and thoroughly pleased with its performance. For what it's worth, I think it beats the TS-2000 hands down. It's also my backup radio (primary is IC756 Pro II).

Asking just $1400 for this great package or a trade for an IC-746 Pro.

E-mail me with questions and thanks for reading!

This is a great radio. Fun to operate fixed, portable, or mobile!

FT-100 that has the factory modification for high frequency oscillation (aka HiSWR mod). Includes microphone, modular to 8-pin microphone adapter, CAT cable to computer. Also have the very fine ATAS-100 screwdriver-type antenna made especially for the FT-100 and the YSK-100 separation kit. All manuals, schematics etc.

This rig has been with me on two cross-country trips and operated both fixed and portable on both coasts. Rock-solid performer and a joy to operate. No dings, scratches, or rubs. I'm just trying to build some cash toward an IC-746 Pro.

Asking just $750 for this great package.

Thanks for reading.

Sure appears like you've got it programmed correctly. I think you need to find another ham in your area who has a couple of radios that are working properly, and then you should test with him "off-line", so to speak. Pick a simplex frequency, make sure you can talk to and receive him with and without PL, then do it with a + or - offset. Also try the same thing on 2 meters. If you press the side button labeled MON, it should open the squelch on the active band and you should at least hear noise if there's no signal present. There's not too much that's separate for the two bands in that radio.

Good luck, however.

The bathroom stall is down the hallway and your language (colloquial English at best) is reprehensible. There are ladies and other fine people in these groups and many speak Italian and Polish and many fine foreign languages that you seem to disdain. I'm not going to force any metaphors on you but...

WILL YOU PEOPLE SHUT UP?

I'VE THOROUGHLY HAD IT WITH THE ANTI-FOREIGN, ANTI-GAY AND ANTI-SENSE YAHOOS IN THE PEANUT GALLERY!

Buffalo Bob brought a paddle in case you won't behave, I hope.

This crap won't even fly on the Truckin' Bozo radio show.

This group is about antique radios and phonographs, and a bit of mostly related off topic posting. Don't go cross-posting it unless it relates Completely with the topic of this group!!!!!!!!!!!!

The next vegetable that pops up should be salted and served.

IOTD (Idiot of the Day) goes to:

Esp. the untimely and uncalled for use of the "F" word. We don't even hear banter like this in our local drinking holes. SHUT UP! and stay AWAY from our group if that's all you're good for. Get another hobby, but go away!

I have a good station. I purchased it just before the market tanked.
If the market had held off a while I'd also have had a new lathe and
floor mill to play with, but....

I installed the tower and did virtually all the work by hand...with
the exception of the holes for the guy anchors. The guy who dug the
holes with a back hoe also used it to carry the anchors out and place
them in the holes after we (two other Hams and myself) put the forms
for the concrete in and poured the crushed rock in the base.

http://www.rogerhalstead.com/tower.htm is a pictorial and story of the
tower project.

I should put up a page covering some of the stations I've had over the
years. As I said, I have a good station, but nothing like what I had
years ago. Then again, I don't have as much room either.

I have a good HF rig that also covers 6 with a 100 watts out and the
antenna is a 7 element C3i at 115 feet. As I said, that came before
the market tanked.

For 2 and 440 I only have FM capability at present. Eventually I hope
to have an all mode rig for those bands and I'm starting to look for
parts to build up a 2.39 Gig and 4.5Gig EME station. I might even try
it with 440 SSB and CW...maybe even WSJT. That is going to take some
time to acquire the parts and probably a lot of bargain hunting.

Well, my house is vertically challenged. I live in a valley, and had to go up 60' just to make ground level. Currently I only have a 6M vertical. I really should put up a horizontal 6M antenna, and am considering building a halo, our buying an Isotron. I can hear 6M SSB activity some times, but have had limited success getting back to them.

I've got 100W on 6M, and was hopping to get into the 200W range with the sweep tube amp.

I've got a few other HF amps collecting dust, one with a pair of 811A's, and the other with 4 - 811A's. If I can't get the sweep tubes to work satisfactorily, I have to start on one of them.

I found the schematic for that amp, and it looks interesting. Now all I
need is a little more time to play with it.

Just for the sake of the argument, it's by George Carlin.
The Bad American thing.
And heh, I have a copy of Toh Lehrer's Lobachevsky song here.

That's not by George Carlin. Here's a link to his web site where he denies authorship.

<http://www.georgecarlin.com/georgecarlin/home/bogus.html>

It's also been attributed to Ted Nugent - he's also denied authoring it.

<http://www.tednugent.com/news/10042001.shtml>

Thanks. It was attributed to Ted when I first heard of it.
It sounded so much like him, I just accepted it as fact.

<Snip>

Your valid article starts out OK but then discusses various Indian tribes consumption of mushrooms with hallucinogenic properties along with Shamanism and other religious topics. Also mentioned is Terrence McKenna. If you want to find out what Terrence was interested in read more about this man who died of brain tumor here http://www.levity.com/eschaton/hallucination.html

Skip the self-flagellation.

HI folks

I have a strange problem with my tm742 Kenwood tranceiver :

i cannot transmit and receive on any band , not on 2, not on 70, not on 23cm
if i puch the PTT it like it transmitting but no signal

a collegue advised to cheque the backup-battery. normaly it is 3 volt, i
measured 3.2 volts (seems normal i think)

who nows more????

Happy Newyear to you all !!!

Hello CDR,

I did have exactly the same problem with my TM-742E, due to a short-circuit in the microphone connector. I think a (SMD) fuse has been blown. I did'nt fix the problem myself, but the local service outlet did; so I cannot help you with the exact sparenumber of the fuse. You may find this SMD-part in the Control Unit.

Don't hesitate to drop me an e-mail if you have any further questions about this problem.

Good luck and happy 2003 to you too!

Thats a good design, they illustrate how high output capacitance
can be handled with a very different network. Note read the article
well. the amp really wants a low pass filter to meet current
standards for harmonics if memory serves the have a plan for said
filter.

Allison

7697. Yaesu FT817 FS or Trade

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-29 16:12:14 UTC
From: VE3TMT <ve3tmt@cogeco.ca>
Message-ID: <EdFP9.52487$lj.1528317@read1.cgocable.net>
Source record: 35058

Yaesu FT817 QRP rig - purchased October 2002
LDG Z-11 Autotuner
3 internal battery packs - 1 MAHA FNB72 1700mA
- 2 RS 23-331B 1650 mA
1 12V - 5aH gel cell with split cord for both rig & tuner
All supplied cords & connectors
Pelican 1500 series custom carrying case

PLEASE READ

The radio's original internal battery lead has been replaced with a fused one. The internal battery packs have also had the power leads replaced to match. This modification allows the internal battery pack to be charged when running the radio off external 12V power. I also have the Radio Shack 2 tray charger (# 23-440) that allows two of the battery packs to charge then automatically shut off.

The original manual is suplied, as is warranty card, but I do not have the boxes or shoulder strap. . The MH31 contains the Heil HC4 cartridge and the W4RT "One Big Punch" speech processor.

I purchased this gear thinking I would be getting into QRP activity but I just don't have the time.

Looking for small mobile HF rig, or any with detachable head unit (FT900, 706 series, etc) Also interested in building up my TS850S line so I would be interested in those accessories, escpecially the DSP-100 unit. and the SP950.

Thanks for reading.

Invest in a good 3 or more element beam, you'll see the difference
more than if you had higher power. I work stations at 600mi fairly
regualr with 20w and 2 elements though I'm not in a valley or on a
hill.

>the other with 4 - 811A's. If I can't get the sweep tubes to work
>satisfactorily, I have to start on one of them.

811s really don't work well at 6m. Though the one with a pair of 811s
would make a good base if you replace the 811s with 4cx250s.

I've got a tower up (50' of Rohn 25), with a 3 band vertical (6M/2M/70CM) on a 10' mast. This is just barely at ground level 500' away. I'm not sure a horizontal beam would work well in this situation.

> 811s really don't work well at 6m. Though the one with a pair of 811s
> would make a good base if you replace the 811s with 4cx250s.

The problem with the 4CX250B's, are that I don't have any, and I'd need sockets, blowers, chimneys.....

I've seen some designs of the 811A's on 6M, which is why I suggested them. I'm still going to play with the sweep tubes some more before I give up on the idea.

<< i cannot transmit and receive on any band , not on 2, not on 70, not on 23cm
if i puch the PTT it like it transmitting but no signal >>

CDR-

I am having this problem also. However, it sometimes works. When it works, the display light is brighter and I can see it dim slightly when I transmit. Sometimes it changes between bright and dim display without being touched!

I also have the TM-942 which has the additional 1200 MHz module. It works most of the time but sometimes will exhibit the problem. This radio had the CMOS battery replaced about six months ago.

Someone suggested that the problem might be voltage related, but I haven't had a chance to make any measurements. It doesn't seem to matter whether or not the car engine is running, so voltage may have nothing to do with it. However, that is the common link between the two radios, and is sort of a coincidence they both have the same problem now and neither did before I installed them in the car.

If your tuner doesn't work on any antenna then your SWR meter could be faulty ? Have you got it in the right place.

To obtain a circuit diagram of the tuner first remove the cover. Then obtain a sheet of paper and a ball-point pen. Copy what you see of the wiring onto the paper. And there you have it!

Can't be too difficult. At most there's only one coil and two capacitors which you should have no difficulty in recognising.

Whole different can of major snakes. Hard to do, most cases
impossible. The transistors may not have enough FT for 50mhz and the
whole input and output matching would change, significantly. I build
alot and have designed for commercial and 6m ham and what works at
27mhz tends to behave badly at 50.

Yes it will. Polarization is everything. I have a 6m Jpole (for 6m
repeaters and FM simplex) and it does not hear signals that make the
meter move on the 2 element and they are about the same height. I
also have both horizontal and vertical beams for 2m and the difference
is significant if wrong. All the 6m SSB work is horizontal.

To give an idea. The 2m vertical is 3 elements, the 2m horizontal is
15 (crushcraft 15b2). Aimed at a distant repeater I see S9 off the
vertical beam, S5 off the horizontal. Polarization counts.

>The problem with the 4CX250B's, are that I don't have any, and I'd need
>sockets, blowers, chimneys.....

Flea market when your see them. You only need one of each as a lone
4cx250 will stand 500W SSB service. Three will loaf at 1kw.

>I've seen some designs of the 811A's on 6M, which is why I suggested them.
>I'm still going to play with the sweep tubes some more before I give up on
>the idea.

I didn't say they won't work only they don't work well. Some are
often subbed with TL572s which are better. If you have a 6m 811
design by all means give it a shot. if you have 100W you need to
really get at least 200 out to make it worth your time. But remember
if you can't hear them you cannot work em and the antenna will
definately help you hear them. 90% of the 6m DX i've worked was 100w
or less and at least half were using low power (usually transverter at
10-20W).

Even a cheap 3 element beam is 7db and that beats any vertical you
have for 6m. I'd guess that a 3db improvement over a vertical for gain
and also required polerization. If mony is a problem build a 6m
dipole and try it t would be about 112" of #12.

Yes, the antenna (1/2 size G5RV) works fine on 20/40m bands. VSWR meter shows 1.5 : 1 in mid band on both.

On non res bands it shows 5:1 +

> To obtain a circuit diagram of the tuner first remove the cover. Then

Yes, I tried that and came up with a circuit that made no sense to me at all. It appears that one of the input coils is connected to the middle of the PL259 connector, but there is nothing connected to the other end of the coil.

> Can't be too difficult. At most there's only one coil and two capacitors
> which you should have no difficulty in recognising.

Your right I did manage to work those two out.

I was looking for a circuit diagram so that I could compare what I have against what I should have.

Thanks,

Neil.

Actually having both polarities is helpfull as skip, inversion and
tropospheric ducting cause random polarity shifts. If the signal is line of
site or ground wave it is extremely important to not be cross polarized but
when the signal is more distant polarity shifts will make the best polarity
unpredictable.

I have a 6M verticle and a 3 element horizontal yagi. They are both at
about 25 feet. Local SSB signals are MUCH stronger on the 3 element yagi
but skip signals will vary between the two and not depend on the polarity of
the originating station. I have just about as much luck using 20 watts from
an MFJ single bander as with 100 watts from an IC-746.

At least observance of the Magi/taking Jesus to the Temple has some
credibility for this time of year. Dr Gene Scott & others have shown from
scripture that Jesus was born around the Jewish New Year/Feast of the
Trumpets.

> In 336 A.D., Pope Julius declared Christmas on December 25,

Now if only today's RC church could be as honest about Maryolatry/
Immanculate Conception/Incisionless Caesarian Section etc. as was
Pope Julius about trying to hide Xmas behind pagan ceremonies.

> The heathen ceremonies referred to were the Roman festival
> of Saturnalia and Brumalia.
>

> ----------
> Saturnalia (feast of Saturn), was both a gigantic fair and a
> festival of the home. Riotous merry-making took place, and
> the halls of houses were decked with boughs of laurel and
> evergreen trees. Lamps were kept burning to ward off the

Tree worship is at the root of the monotheistic religions, not just
of the pagan mythologies. For example, the Muslims like to quote the

Bible as referring to 'Allah' in Joshua 24:26 in order to lend their religion credibility. But we know from Genesis 12:6 that it refers to The Oak of Shechem as an altar/sancutary of the Lord. 'Allah' is a semitic word for 'oak' and like the druids, the early semites thought that oak trees were holy. When Israelites took over, they merged the pagan god's place into their own religion, just as the Chrisitians had done to the druid holy places. There are also other references in the Bible to holy oaks via the words "Elah" & "El".

Ah, so Aurelian set the precedent for Christmas Day being confused with the birthday of Jesus.

Actually, he would be right in the literal sense of the word "ignorant".
Even goy historians at the time admitted the existence of Jesus, and
a Jewish historian claimed that he did exist, and as he was Jewish, that
makes him credible. As he had access to original documents/witnesses that
proves the matter beyond the ability of modern ignorant historians to even
cast a reasonable doubt on the matter.

Dave Shrader (david.shrader@attbi.com) muses:
> 2) Did Jesus do/claim what he did for fame/ financial gain/ political
> fame/ etc.? Jesus was and remained poor through his life. He knew that

Only Mary was poor, and then only technically, since religion is big business. In order for her to live at the Temple, she must have been from the Levites who had no property of their own. Joseph on the other hand was a building contractor, which was a medium-sized business, and he was middle class. Joseph's uncle, Joseph of Arimathea, was an official Roman supplier for various base metals, which was big business, and made him wealthy. He then adopted Jesus when Joseph died, so Jesus did not become poor due to the death of Joseph, as is commonly taught.

> feasts. [The old adage: When in Rome, do as ...] The actual birthdate
> of Jesus is unknown and was arbitrarily chosen for the Janus feasts.

It is known: as shown by Dr Gene Scott and others, between the Feast of the Trumpets and the Jewish New Year.

Michael Moore (m.moore@NOSPAMutoronto.ca) fabricates:
> Dave Shrader wrote:
> There are no surviving Roman records of the First Century
> that refer to, nor are there any Jewish records that support
> the accounts in the Christian gospels --- except one:
> Josephus', which was published in 93 A.D. It was a history
> of the Jews. While discussing the period in which the Jews
> of Judea were governed by the Roman procurator Pontius
> Pilate, Josephus included the following account:
>
>'About this time there lived Jesus, a wise man, if indeed one
> ought to call him a man. For he was one who performed

Here Josephus casts questions Jesus' divinity, by calling him a wise man, and then asking a rhetorical question "if indeed one ought to call him a man". We know he's asking a rhetorical question, since he never gives us any reason to believe that he was not a man.

> surprising deeds and was a teacher of such people as accept
> the truth gladly. He won over many Jews and many of the

This is a bad translation. Here Josephus is calling people who gladly accept anything as the truth gullible.

> Greeks. He was the Messiah. And when, upon the accusation of

This is also a bad translation. It should say "He convinced many Jews and many of the Greeks He was the Messiah". There is no period in the middle of that sentence. This is clear from the sentence that follows, which explains the consequence of the dubious claim 'He was the Messiah' by implying accusations of blasphemy and/or treason.

> the principal men among us, Pilate had condemned him to a
> cross, those who had first come to love him did not cease.
> He appeared to them spending a third day restored to life,
> for the prophets of God had foretold these things and a
> thousand other marvels about him. And the tribe of the
> Christians, so called after him, has still to this day not
> disappeared.'
>
> This account has been embroiled in controversy since the
> 17th century. It could not have been written by a Jewish
> man, say the critics, because it sounds too Christian: it
> even claims that Jesus was the Messiah!

It doesn't: it only reports that Jesus convinced others of that claim.

> The critics say this paragraph is not authentic. It was

Those critics are basing their argument on a bad translation. It's easy to make winning arguments against strawmen.

> inserted into Josephus' book by a later Christian copyist,
> probably in the Third or Fourth Century. Modern writers
> suggest that Josephus' account was instead derived from a
> Jewish-Christian "gospel" that has since been lost.

Let's assume that Josephus was too lazy to verify his sources. Even so, he still has more credibility than any modern historian on the subject.

> In any case, it would appear that Josephus' passage is
> nothing more than recital of Christian belief, not a record
> of a historical event. For example, elsewhere, Josephus
> tells us quite unequivocally that Jews inherited the "Wisdom
> of Solomon" and therefore were especially adept at
> miracle-working and cures. Josephus tells the story of how
> King Solomon himself told how to perform healings. Josephus

This was not a recital of a Christian belief. And notice that Josephus shows no negative consequences for the Jewish beliefs, which is his way of showing that Jewish beliefs are superior to Christian ones. The final step in the proof, is that Josephus in his original used the past subjunctive when writing "He WAS the Messiah". Had this been a Christian belief, it would have been in the present indicative: "He IS the Messiah".

I bought a 6M 250W transistorized amp off of eBay, which ended up being a CB amp, that had no output on 6M. Got my money back from eBay, and ended up with the amp, as the guy refused return delivery. I did play around with the amp to see if it could be used. The problem was the core on all the toroids, which had a maximum useable frequency of 35 MHz. It makes sense for it not to work much higher to reduce TVI.

I've got a horizontal 6M folded dipole up in the attic, but it's 40' lower than the vertical. I've made international contacts on it with only 10W (was on FM too!).

6M seems to have gone south for the winter, as I haven't heard much DX for a couple of months.

I'm not sure I'd be willing to give up the top of my tower for just a 6M antenna, which is why I was considering the halo. I can tack it onto the side, and have mostly omni-directional horizontal 6M.

This *isn't* an internal Lab version for Motorola Depot use - I
suppose you could call it a 'hacked' version, made by Motorola techs,
for use by amateurs to place X9000's into the ham bands. Finding the
offshore sites for radio software isn't a problem either - it's one of
those 'open secrets' of the radio population...

Thats not really a problem as that impacts transformer losses, which
would not rise much at 2x the freq. the transistors I'd have to look
up but they likely are near the reasonable upper corner for operating
frequncy. so the gain of the amp would drop off at higer freqs and
that cannot be compensated by raising input power.

Allison

I'd try that though most of those loops are really sorta only ok
compared to a simple dipole. Actually you could put two dipoles
near the top in fixed orientations at 90degrees to each other and
that would be better. The wide figure 8 from one or the other
would give good coverage.

I run a second 6m antenna, a twinlead dipole at 10ft, poor of the
ends but its set up for east/west and works fine for that. last
contact off that was western NY (~300mi) using the 5w radio.
That antenna hears SSB better than the vertical which
is at least 10ft higher.

7741. TS-570 & INRAD #88 2.8 Khz filter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-30 05:10:53 UTC
From: Ken <kennjd@adelphia.net>
Message-ID: <xzQP9.39548$VA5.7563279@news1.news.adelphia.net>
Source record: 35101

Anyone know of someone who installed an INRAD #88 2.8 khz wide ssb in a TS-570 ?

How'd it turnout compared to the stock filter ?

Is the stock better overall or does the INRAD let more speech fidelity through (receiver audio)?

This question is mostly in regard to receiver audio.

Thanks in advance,
Ken, WB9YCJ

Because you are too stupid to know the difference between the writings of Josephus and those of the Bible, and the difference between a translation of a copy of a copy of a copy, and the copy.

>>>inserted into Josephus' book by a later Christian copyist,
>>>probably in the Third or Fourth Century. Modern writers

>> when writing "He WAS the Messiah". Had this been a Christian belief, it
>> would have been in the present indicative: "He IS the Messiah".
>
> I think your reading too much into it. No doubt because you
> need to.

Liar: as bad as that translation is, it still does not say that "He IS the Messiah". If you weren't such a stupid liar, you'd have noticed that the words 'He' and Messiah are capitalised, which Josephus would not have done. You're quite pathetic for not noticing something so obvious.

(Even if the monks who copied Josephus changed the capitalisation, that still doesn't meant that some monk inserted passages. In fact, changing capitalisation in many cases is sufficient to change the meaning, since a capital letter would signal the start of a new sentence. But, they likely changed the capitalisation to conform to the Church's editorial policy, and not to your conspiracy theory. In order to save time, ink, space, or work, the copyists often omitted punctuation and spaces between words, which would enhance the effect of changing capitalisation.)

> See my other post about Josephus. Also, other than
> Josephus, there is no record.

Liar: there are plenty of records. Most recently, archaeologists have
discovered the ossiary of James, the step-brother of Jesus. It
specifically says that he was the son of Joseph (by a prior marriage)
and the brother of Jeshua (which in English is rendered Jesus).

Then there is the written account of James in his Protevangelion.
Then there is the account of Josephus that James was the brother of Jesus.
Then there is Agapios' 10th century arabic version of Josephus which also
contains the passages referring to Jesus.

But none of these guys are white, which in your mind disqualifies them as
credible, eh? Okay, here's a list of white guys for you:

Tacitus:

"To stop the rumor, Nero substituted as culprits, and punished with the
utmost refinements of cruelty, a class of men, loathed for their vices,
whom the crowd styled Christians. They received their name from Christus,

who was executed by sentence of the procurator Pontius Pilate in the reign of Tiberius. That checked the pernicious superstition for a short time, but it broke out afresh, not only in Judea, where the plague first arose, but in the capital of Rome itself, where all horrible and shameful things in the world collect and find a home." (Tacitus, Annales 25.44)

Suetonius:

"He expelled the Jews from Rome, on account of the riots in which they were constantly indulging, at the instigation of Christus." (Suetonius, Lives of the Caesars: Claudius 25.4) which corroborates Acts 18:2.

What it confirms is what Christian belief was -- not
necessarily historical event. You do understand the difference?

>>>>In any case, it would appear that Josephus' passage is
>>>>nothing more than recital of Christian belief, not a record
>>>>of a historical event. For example, elsewhere, Josephus

>>

>>That's your opinion.
>
>
> Liar: it's the opinion of Josephus himself.

Perhaps you may have thought I said that it was a recital of
Josephus' belief but I did not. The *single paragraph* (not
much in the way of historical detail) that Josephus wrote
about Jesus appears to be his understanding of Christian
belief, not necessarily his personal belief.

>>>Josephus in his original used the past subjunctive
>>>when writing "He WAS the Messiah". Had this been a Christian belief, it
>>>would have been in the present indicative: "He IS the Messiah".

> You're quite pathetic for not noticing something so obvious.

LOL. Methinks you're trying too hard. One of the points of
the 17th century critics was, in fact, that Josephus didn't
write the passage. Your point about the captilization is
relevant how?

> (Even if the monks who copied Josephus changed the capitalisation, that

In the end, we're still left with a single paragraph that
offers nothing in detail. That, you cannot change. If
that's you're idea of proof, so be it. But it's not mine.
As far as I'm concerned, the question is still open.

I meant to say " ... no record from the 1st century".

That the archeological find is the ossiary of James is
conjecture.

> It

> but it broke out afresh, not only in Judea, where the plague first arose,
> but in the capital of Rome itself, where all horrible and shameful things
> in the world collect and find a home." (Tacitus, Annales 25.44)

Actually, it's from the Annals 15.44 (115 A.D.). Below is
the version that I could find.

Consequently, to get rid of the report, Nero fastened the
guilt and inflicted the most exquisite tortures on a class
hated for their abominations, called Christians by the
populace. Christus, from whom the name had its origin,
suffered the extreme penalty during the reign of Tiberius at
the hands of one of our procurators, Pontius Pilatus, and a
most mischievous superstition, thus checked for the moment,
again broke out not only in Judaea, the first source of the
evil, but even in Rome, where all things hideous and
shameful from every part of the world find their centre and
become popular. Accordingly, an arrest was first made of all
who pleaded guilty; then, upon their information, an immense
multitude was convicted, not so much of the crime of firing
the city, as of hatred against mankind. Mockery of every
sort was added to their deaths. Covered with the skins of
beasts, they were torn by dogs and perished, or were nailed
to crosses, or were doomed to the flames and burnt, to serve
as a nightly illumination, when daylight had expired. Nero
offered his gardens for the spectacle, and was exhibiting a
show in the circus, while he mingled with the people in the
dress of a charioteer or stood aloft on a car. Hence, even
for criminals who deserved extreme and exemplary punishment,
there arose a feeling of compassion; for it was not, as it

seemed, for the public good, but to glut one man's cruelty,
that they were being destroyed.

It could be that Tacitus is simply repeating what was common
knowledge about Christians about the beginning of the 2d
century. The most likely source of Tacitus's information
about Christ is Tacitus's own dealings with Christians,
directly or indirectly. IOW, Tacitus provides no historical
record about the actual life of Jesus.

> Suetonius:
>
> "He expelled the Jews from Rome, on account of the riots in which they
> were constantly indulging, at the instigation of Christus." (Suetonius,
> Lives of the Caesars: Claudius 25.4) which corroborates Acts 18:2.

My translation says:

"As the Jews were making constant disturbances at the
instigation of Chrestus, he expelled them from Rome."

It is possible that the Jews were expelled from Rome for a
different cause. "Chrestus" is a suitable Greek name, so
there may have been an agitator by the name of Chrestus in
Rome. Or there may have been a different messianic pretender
in Rome. It is difficult to say.

Sure, but you will need an external keying relay or foot switch. Don't
try using the relay in the radio to key the amp. The heath keying
voltage is fairly high.

Just a thought....have you looked at the plate DC feed isolation choke? It
certainly isn't unusual for these things to be self-resonant somewhere not
too far above the HF region.

Just replace the obvious with my call for E-mail--I hate Spam, unless it
comes in a can, and even then......

Short answer: yes, some amateur HT's cover the GMRS frequencies...

NO... technically, it would be illegal, since GMRS equipment must by
Type Accepted by the FCC for those frequencies.

I have an "Electrostatic Voltmeter - Kodak TL3694" that was snatched from a trash bin.

Does anyone know what it might be good for?

It has a 9v wall wart (and also two 9v battery clips.) It powers on and the probe has a mechanical vibration of about 1200 Hz. The meter reads between -400 and 1100. The Test button does not seem to do anything and the Zero pot changes the reading but never gets it to zero. The whole thing (including wall wart) is in a black leather case about 3x6x8 inches.

Good afternoon, name here is Trey, callsign is KC9CCZ in the ham service, I am 15 years old and my home QTH is in Terre Haute, IN.

I was wondering if someone could tell me how to program memories into an Azden AZ-61 6m FM Handheld. I have a friend who has one and it's been frustrating him because he can't figure it out. Probably received as a gift from someone. The only information I need is how to program memories and program your own offsets.

Thanks! If anyone can help it'd be greatly appreciated. Email is kc9ccz@hotmail.com or AOL Instant Messenger is TBCOML14, NiRVANA PHREAK 9 or KC9CCZ.

73 to All.
-Trey, KC9CCZ

I've gotten the amp to work somewhat. I made an tuned input circuit for the amp, and there wasn't much difference. I'm currently getting about 90 watts output, with 10 watts input, using 3 - 6JS6's.

Looking at this RF choke is a excellent idea. Mine is only 30 or so turns over a 1/4" core. I should see where it resonates. I wonder if this could be causing the extra capacitance on the input of the PI network.

I think my problem is still the capacitance of the tubes themselves. The 6JS6's are 10pf per tube,as opposed to the 6KD6's which are 16pf per tube. Currently my Tune cap is completely open at tune-up. I still haven't tried what WB2TT suggested above, plus there is a neat design in the amp called the "Mini-Lini". You can get the schematic at:

http://6mt.com/mnlin.zip

This is just 3 gif images, so don't worry about the download.

I shortened the coil more, and got it to dip at 70 MHz, but I got n\almost
no output at 6M.

With the coil resonant restored back to 52MHz, I'm getting 90 Watts output
(I've got to measure my plate current again). Seems clean, as harmonics are
well below 60dB on my spectrum analyzer. The bandwidth of the Pi network
seems to be extremely narrow (1MHz). This is probably due to the Tune cap
being wide open all the time.

Interestingly, I made an tuned input circuit as described in the "Mini-Lini"
and only saw about 10 more watts output. The tuned input did make the weird
power levels disappear though, where I only saw full power after a few
seconds.

I've still gotta try you coil before the PI network, or perhaps the output
section used in the "Mini-Lini".

I'm sure learning a lot about higher frequency amps. At HF this stuff seems
all so simple......

With all due respect, the reason for the name of the group is to
define the subject to be discussed in the group. Do you see
religious fanatics in the name of any of these groups?
There are religion groups and that is where this should be discussed.

Probably not ... be careful!

I don't know the SB-201 specifically, but the SB-200 (and I think the SB-220 also) use a 110 V relay internally for keying. If the '201 is similar, you need to be able to key 110 V to ground; you don't feed it a voltage.

It's pretty easy to rig up an external relay that you can key with that 16 V you have available. It's probably 16 V max, but actually 13.8 V if you're using a typical power supply. You'll need a relay with a "12 V" coil that can handle 110 V on the contacts. Radio Shack carries suitable relays.

Nope, I don't think that would work. The keying voltage is from the
amp, not the radio. And I "think" it's about 120 volts. You don't want
to use the internal relay in the rig to switch this. Too risky. You
would want to use the radio's little relay to switch a larger relay,
or you could just use a foot switch. I use foot switches quite a bit
myself. The reason being, I switch rig's and don't like to switch my
amp lines around. MK

Agreed. One of the few Dealers
of Ham Gear that was run like a
real business with friendly and
knowledgeable salespeople.

Sounds like Universal Radio is going
the way of the old Trevose Hamtronics
and Delaware Amateur Supply. Two other
shyster ham radio stores (thankfully now gone
and for the most part forgotten..) that were
each run like the proveberal "shady used

car lot" and had salespeople with attitudes like
the horse's ass. Oh well. I guess it's
now a resounding "phooey" on Universal
Radio also.

>> discovered the ossiary of James, the step-brother of Jesus.
>
> I meant to say " ... no record from the 1st century".

Liar: that inscription is from the 1st century, just as the ones in Israel concerning Pontius Pilatus.

> That the archeological find is the ossiary of James is
> conjecture.

Liar: it was discussed on BBC worldservice both on Focus on FAith and reporting Religion. The inscription says it is for James. They discussed the authenticity of the inscription and the ossiary itself, and found no reason to doubt either.

>> specifically says that he was the son of Joseph (by a prior marriage)
>> and the brother of Jesus (which in Hebrew is rendered Jeshua, etc.)
>
>> Then there is the written account of James in his Protevangelion.
>> Then there is the account of Josephus that James was the brother of Jesus.
>> Then there is Agapios' 10th century arabic version of Josephus which also

So what? He provides a historical record that such a person existed.
No doubt, you'll argue that it's not the same person.

>> Suetonius:
>>
>> "He expelled the Jews from Rome, on account of the riots in which they
>> were constantly indulging, at the instigation of Christus." (Suetonius,
>> Lives of the Caesars: Claudius 25.4) which corroborates Acts 18:2.
>
> My translation says:
>
> "As the Jews were making constant disturbances at the
> instigation of Chrestus, he expelled them from Rome."

Once again your translation is not from an Arab source, but a European one.
The Arabs certainly weren't pro-Jewish, and possbily had axes to grind,
so I could make the counter argument that it was they who watered down
Josephus' glowing account of Christ with a liberal dose of skepticism. But
not everyone can excel at hair-splitting, so I'll just accept the Arab
version as closer to what Josephus wrote than the European ones.

There are also references to Jesus visiting India during his 'lost' years
as documented by Raimundo Pannekar. Of course, these sources won't be
white enough for you either, so feel free to overlook them.

> It is possible that the Jews were expelled from Rome for a
> different cause. "Chrestus" is a suitable Greek name, so
> there may have been an agitator by the name of Chrestus in
> Rome. Or there may have been a different messianic pretender
> in Rome. It is difficult to say.

Just as the 'Pontius Pilatus' inscribed at the Roman Theatre ruins at
Caesarea is not the same Pontius Pilate of the New Testament or in the
writings of Josephus. For a mind as narrow as yours, complexity is
certainly a diseconomy of scale.

Give me a freekin' break! Universal doesn't have a particular radio to demo and all the sudden they aren't worth patronizing? I've dealt with them several times and have been exceptionally satisfied. This has all the earmarks of some kind of spite inspired hatchet job. I don't hesitate to recommend Universal!

It doesn't matter whether Jesus ever existed or not.

It is still widely accepted 'his' basic teachings are worthy of being incorporated in present-day social/political laws which attempt to govern unstable human behaviour. In the interests of life on Earth it is irrefutable that such laws must exist.

There are other teachings which have evolved over crudely the same epoch (20,000 years since the invention of writing) which differ little in their essentials.

There are some religions which have not withstood the test of time or their remnants have become merged with the others. And there will be future modifications to be included which cover such matters as cloning and use of the human organism. Evolution is nothing if it remains static.

At present the overwhelming concensus of world opinion is that messrs B*** and B**** must go. But it seems Viagra is here to stay.

7792. Yaesu FT-625RD Local Osc Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-12-31 05:02:57 UTC
From: Skweezieweezie <noway@thistime.now>
Message-ID: <NQadnfAVgKGKuIyjXTWcpg@comcast.com>
Source record: 35003

Santa delivered a free Yaesu FT-625RD this year.
This is a 6m rig, covering 50-54MHz in four 1MHz bands.
Bands 3&4 (52 & 53MHz) seem to work fairly well and
I can tune up the LO correctly to have them on freq.
Bands 1&2 (50 & 52MHz) will not allow me to correctly
set the tuning slugs in the LO so that each 1MHz segment
in each band is matched to the other bands.

Example..... 50.500, 51.500, 52.500, 53.500
The above is correctly aligned.

What I CAN get is this:
50.490, 51.470, 52.500, 53.500

The bandswitch switches 4 crystals, each with a tuning slug.
1 crystal per band. 70.010, 71.010, 72.010, 73.010MHz.

The first two crystals 70.010 and 71.010 cannot be put on
frequency, this is why the first two bands are out of sync with
the last two. When I get the first band's LO adjustment close,
the slug bottoms out in the can. When adjusting the 71.010's
corresponding slug, the LO quits as soon as I get close to
69.97MHz, and the display flashes 50.000 because the built-in
digital freq counter senses an out of band condition.

The Yaesu FT-625RD used a modular construction and I've already
cleaned the LO board and sockets contacts. Each crystal is
switched into the LO with +8 volts, which is correct when measured
with a digital meter on each band at the crystal. There are several
switching diodes in series w/each crystal which have checked
good on the DMM's diode check function. I've just about re-soldered
every joint on the board, with no luck. Even checked the resistors used
for current limiting to the switching diodes.

I have never seen a crystal age so much to this point, but it looks like
it might be this. Any guesses????

No, try this: Universal doesn't allow a *very* high-end radio to be
tested on site, unlike other high-end suppliers, and there was a touch
of rudeness to it, which gives me pause.

> I've dealt with them
> several times and have been exceptionally satisfied.

I've dealt with them many times and have generally been satisfied,
too. But I have never bought a radio without testing the daylights
out of it at a store, and I've always bought from that store.

> This has all the
> earmarks of some kind of spite inspired hatchet job.

Best check the earmarks again.

> I don't hesitate to
> recommend Universal!

Generally I've had good experiences with them, with the last being
only fair and being disappointed with this one. Be serious -- one
doesn't plunk down this kind of coin based on a picture on a web page.

Actually I don't blame Universal for not setting such an expensive radio on
display to be played with and scratched. Some folks let their kids play with
the radios.

Hello Group
I'm looking for a schematic of the ICOM OPC-478. Any help would be
appreciated.

Also, I have the Icom IC-2100H and several years ago purchased the
CS-2100 (DOS) Programing Software. ICOM sells only the OPC-478 + the
WS-2100 (Windows) Programing Software. If anyone has a copy of the ICOM
WS-2100 software to sell, I would appreciate knowing about it.

I was given a copy to evaluate of a non-ICOM version. Unfortunately,
the software crashes frequently on WIN98.

Thank you, Happy New Year to all in the group -

Ken, WB4ZOH

7799. FS:KT 34 M2 Trivand Yagi for Sale

This is the new four element M2 tribander. Formerly the KT34A but now
redesigned by M2 for even better performance.
Four linear loaded elements for 10, 15, 20 Meters. 16 foot boom.

See www.m2inc.com for more details.

This antenna is brand new, in a sealed box. Never opened. Owner changed
his tower/antenna plans.

Asking $950.00 plus shipping from Los Angeles

There are plenty of published reviews of that receiver that will probably tell you a lot more about its reception performance than you'll get, testing it during daylight hours at the store on an iffy antenna, with flourescent lights, etc. shining away.

I've made several purchases at Universal and was pleased with their knowledge and service. I've been a ham for 45 years and appreciate the business end of amateur radio. We need dealers such as Universal. I wouldn't hesitate purchasing radio gear from them.

Fellow amateurs, don't let one individual or one incident color your perception of a dealer doing the best they can in a very competitive market environment. I look forward to seeing their crew every time I am able to go to the Dayton Hamvention and I always get good, positive and helpful service from them when I call them. They are good folks and I'm glad they are in the business.

It's a much better idea to test the radio before you ever go into a store. Find a ham in your club that owns one and check it out. How can you possibly tell how good it is in the store? Their antenna setups can easily bias the results for example. Then of course the ARRL test reports should be consulted too. The only thing you can really tell in a store is do you actually like the looks and feel of the controls and display.

>well below 60dB on my spectrum analyzer. The bandwidth of the Pi network
>seems to be extremely narrow (1MHz). This is probably due to the Tune cap
>being wide open all the time.

Try replacing that cap with one that has a lower minimum capacitance.
You might be on the hairy edge of tuning. If the pi network is that
narrow you running with too high a loaded Q, most likely due to plate
capactitance and the minimum capacitance.

>I'm sure learning a lot about higher frequency amps. At HF this stuff seems
>all so simple......

The jump from 28 to 50 mhz is that funny region where VHF effects like
stray capacitance and stray inductance really start to become
significant.

6m was open this am to the west, worked EN33 and a few others.

The problem lays in that few are likely to buy the radio from the store. They will kick the tires, ooh and aah, and then order it on the internet or from a mail order firm. The store I worked in sold several top line radios but they were to locals who wanted to do business locally and have instant access to the repair bench when needed.

We carried some on demo but they were loaners from the manufacturers and we did not have to sink capital into the rig. Collins, Drake, and Icom were always amiable to this arrangement. Other manufacturers would put a radio in our showroom for a week with special pricing in effect. This was usually concurrent to the week before a major area hamfest.

Steve

Perhaps Jesus was one of the Raelin (?) clones - implanted in
Mary which would explain the concept of an immaculate conception.
Thats as good an explaination as any I have heard. Perhaps the
Greek Minotaur and other half-beast, half man creatures we hear
of were cloning experiments gone bad or just experiments in mixing
DNA. While we are grabbing for straws, lets really let the imagination
run. Perhaps there was evolution and biblical genesis. Primitive earth
evolved creatures were mixed with DNA of a superior race. That
would explain Adams rib being used to produce Eve. These
explainations are just as plausable as the religious theories. Its
just all in the interpretation. What the bible states, fits in
perfectly with these ideas. Religious belief systems are so
watered down that you could never find truth in them. Its like
the story that gets told from person to person and ends up
being something entirely different when it makes its way back
around.

GE Portables

GE MPA VHF System 146 - 170 Aegis digital encryption. Nice radio
9.0 condition. 160 channel Alphanumeric display. With antenna
and battery. Has full keypad, Great ham or public safety radio. $300.00

GE MPA VHF Select 16 channel Alpha numeric Display. I have this programmed
on Public Safety. This is a nice radio for fire or Police.

Will do G star for unit ID. $175.00

GE MPA Scan UHF 450 - 470. 192 channel scan. Alphanumeric display.

Has a good battery and new antenna. I am using this radio on ham and
scanning public safety. 8.5 condition $225.00

GE MTL VHF 16 channel scan. Poor mans MPA. No display. Great heavy duty
public safety radio. About a 7.5 condition. $150.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.
With battery and antenna. 7-7.5 $75.00

GE MPD Scan Voice Guard. VHF 150-170, 48 channel alphanumeric

display. Scan and Voice Guard encryption capable. 4 button Keypad.

With battery and antenna. $120.00

GE PCS UHF 440 - 470 8 channel with battery and antenna. Looks
fair. $70.00

GE PCS VHF 150 - 170 8 channel with battery and antenna. Looks
Good. $75.00

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170
but I have programmed these in the ham band with no trouble. These
have battery, and antenna. $75.00 each

GE MPS VHF 12 channel. 8.5 condition. New antennas and used batteries
Standard charger. $60.00 each have 2.

GE MPS UHF 12 channel 8.5 condition. With battery, antenna, and
standard charger. $60.00 each have 3.

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1
good battery. With 1 dual slot charger. $160.00 all 3 radios.

GE Mobiles

GE Ranger 150 N9HH0A110A 150 - 170 110 watt drawer unit only.
This will work with the control heads and cables I have below.
$75.00

GE MVS UHF 440 -470 128 channels. Scans and works good.
Looks great and is programmed on the ham bands.$165.00

GE MVS VHF 150- 170 MHz. 2 channel with mic. 8.5 condition $80.00

GE MCS UHF 440 - 470 4 channel 10 watt mobile separate speaker is
also the control head. With mic. $75.00

GE MLS Low Band 16 channel scan. 42-50 split. New mic. Should
Program to 6 meter ham. 60 watt $150.00

GE MDS UHF 440 - 470 MHz two channel. With Mic and power cord.

I have several of these. 40 watt radio. $80.00

GE PSX se VHF 2 channel radio with all mount, mic, power cable,

and hang-up box. $75.00

GE Mastr II UHF 75 watt with pre-amp. No Icoms drawer only.
MC65KKG88B $90.00 each only 1 left

GE Mastr II Lowband 42-50 slit 110 watt. MC74KCN33A
With 1 set of Icoms $25.00 each I have many.

GE Mastr Pro Low band 110 watt 42 50 split. MT74TCS33
With 2 sets of Icoms. FREE. You pay shipping and packing. I
have many.

Master Exec II Lowband 30-36 split, 100 watt, CG and NB. With Icoms

And most accessories. $30.00

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr
II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that
I have seen marked Ericsson) $65.00

GE S990 head 128 channel scan. $60.00

GE S550 head 16 channel looks good. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger.
16 channel model has short cable and some handle bar mounts. Mic
included but no speaker. $50.00

GE S825 Scan head. With Mic and bracket. Alpha numeric head

For Delta or Ranger. 16 channel Ranger can have 224 channels with

this head 32 channel radio can have 448 channels. This head can

control siren and PA system. You can also use this head to program

Deltas and Rangers. $160.00 See below cables for this head.

GE Accessories

GE Duplexer Mod DB4075 P/N 19C307166P2. tx453.xxx rx458.xxx
With cables. 4 cavity. $175.00

GE Duplexer Mod P1 P/N 19C307166P1 tx453.xxx rx458.xxx
With cables. 4cavity. $175.00

GE MVS Option cable, Used but in good shape. $20.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $1.00 each
Minimum 5 at this price.

Mastr II Mic. $5.00 3 for $10.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $20.00. I have seen
programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.
$4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and
162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50
each. These are the only frequencies I have.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each. Picked up 3
sets of UHF 2C Icoms $30.00 per set of 1tx and 1rx Icom. I have Low

Band Icoms.

GE Delta cables. These are the downloading type used with the S820
heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE Mastr II mounting plates $15.00 each

Power plugs for S500, S550, C500 etc heads. Good pulls $5.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA standard charger, 110 volt. $25.00

GE MPA standard 5 position rack charger, 110 volt. $40.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPS 6 position rack charger, Rapid 3 hour charger

110 volt. Also works with MPR and MPX. $35.00

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $200.00

Home made S825 programming cable. Works great but I just bought a

Factory GE cable so I do not need this now. $20.00

Other Radios and Accessories

Motorola X9000 UHF 100 watt 450 - 470. Has 64 channel head non-DTMF. With

cable, Speaker, and mic. Ready to program and use. $275.00

Motorola HT50 VHF 2 channel 150 - 170 belt clip holder battery and Charger. $75.00

Uniden SPS 802TS 800 LTR portable with charger. $75.00 Pair.

EF Johnson Challenger 5852 portables. VHF I think. With charger and batteries but the batteries are dead. Radios make squelch noise when powered up. As is $40.00 pair.

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $65.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$65.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $40.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Cushman CE3 Service monitor. Has model 330 Broad band mixer / watt meter

Duplexer tester plug-in. Also has 201 scope plug-in. Some of the numeral lamps are out but you can see the numbers with a light. Works well and makes a good starter service monitor. $300.00

Scom 7k model controller, I do not know much about this controller but from reading the documentation it looks like it will do anything you could want it

to do. Make offer or trade. This was an estate item so as is.

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola Saber II UHF 48 channel scan. With battery and antenna. 9 condition $300.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for GE suitcase programmers Data modules, Printers, cables, proms, Anything you have extra. I need some UHF 450 - 470 scan MPD radios. How many do you have and what do you want for them? Johnson scorpion program cable. Looking for an FT90 for the wife's car.

I would like to play with a VX-150 if anyone has 1 to trade.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me. Contact me off list at. Gundoc@insightbb.com

I have an IC-28H which should be basically the same radio, except higher power. I could copy the xmtr section of the schematic and e-mail it to you if you think that would help. I took a look and it isn't obvious to me.

Steve is correct, folks test equipment in a store and then
order online at the lowest price point. This is a big issue
in the small business community, as they are then asked by the
online customer to fix his or her broken equipment. A lot of
small businesses are pushing for an Internet tax to level the
playing field.
